Please sell me one! I have been looking for one of the synchronous
detector modules for ages!

I'd take a Sherwood, I'd take one of the sheet-beam tube ones.... I
may just consider building one with some of the TV set detector ICs
from RCA...

The only major difference I saw between the things was in the PTO... some manufacturers seemed to build much better PTO modules than others.

By the time the gear winds up on the ham radio side of the DRMO, though,
most of them have turned into mix and match sets. So the nameplate on the
front may not indicate accurately where all the modules from.

My experience has been to avoid the EAC PTOs. If you find yourself with
a radio with a goofy or flaky PTO, though, Fair Radio has replacements.
Don't worry so much about the rest of it.

I'd have to say that this darn thing (along with the other four) must certainly have been built out of resurrected parts. There is probably no way that a company is going to gear up, and produce five of these receivers for $38,000 each, for a total cost of $190,000. The costs just wouldn't seem to add up.

Nice receivers though, when well maintained.

The costs would likely add up rapidly for a limited run of a complex
radio like the R390a. The profits would likely not add up at all and
would likely venture into negative territory.

This is very true - get a Cosmo PTO if you can find one- they seem to be
of better than average quality - IMHO.

So it goes.

Perhaps you should read the original articles in Electric Radio
Magazine, issues 71 and 72 March and April, 1995 and get the "actual
facts." I know that would be a real stretch for anything on usenet,
but you would get an education along with the other naysayers as to
the "rest of the story."

This is a small excerpt from a list which has been discussing this particular item.:

I've been reading the archives with interest concerning the Fowler R-390A s/n 2. I no longer subscribe to the list, but several friends told me of the activity about this particular R-390A and I wanted to clear up a few things, so I subscribed this morning to attempt to do that.

The story about this particular receiver was originally published in Electric Radio Magazine issue 71 in March, 1995. A close-up photo of the nomenclature tag was in issue 72 in April, 1995. That is the "Real McCoy Tag" Speculate about made up tags etc. One wasn't made for this receiver except when it was built for the U.S. Navy by Fowler Industries.

I know the owner, V ************* who was mentioned in the original article and it is indeed a "genuine" Fowler and is s/n 2. T ******** reviewed the pictures of this receiver back in 1995 and knows of the validity of this particular receiver, as do several other people.

T ********* did quite a bit of research with personnel from Fowler Industries and Avondale Shipyards regarding the five R-390A's built. That information was published in subsequent issues of Electric Radio Magazine.

I don't have the time right now to answer in detail, maybe tomorrow.

T ********* knows much more detail than I do as he spoke with the former General Manager at Fowler Industries and purchasing people at Avondale (now Northrup Grumman) Shipyards.

They built them using components, but had some difficulty obtaining certain components.Fowler: When T ********* spoke with the Plant Manager he commented that they had particular problems obtaining JAN tubes, in particular 26Z5W's and 3TF7's. Remember, that they were considered "unobtanium" in the late 80's early 90's. Then the government released surplus tubes and Fair Radio was selling them at reasonable prices (they went quickly).

They potentiometers were made in Mexico, the meters were A & M Instruments, the quality of the wafer switches were not as robust as the runs during the 50's and 60's, Dittmore-Freimuth made the mechanical filters (as they did on many later versions), as well as the ones the built themselves, which were 67 EAC receivers with Dittmore's filters.

I can't say if what they obtained, but can assure you they didn't purchase any in the crate R-390A's. Even though they were available at various locations throughout the country. When you bid on a contract the Government lets, you fill the requirements, and they inadvertently left the R-390A spec in the bid offering.

Avondale Shipyards probably didn't think to do a search for "in the crate" R-390A's and put out a request for bids to build five R-390A's. Fowler Industries was Clavier and prior to that Capehart, so they had experience building R-390A's and suppling R-390A spare modules (Clavier).

T ********* can pick it up from here, as that is about I can remember or verify from back when we did the ER articles.

Signed

L ********

I'm sure you can do additional research, and find someone who has these articles. I do, but don't care to scan and post them without the authors permission as they are copyrighted articles.

Harold

Nice. However all I can do is stick with my original assumption. It would be very difficult to build 5 'totally new' R390A's for a measly $190,000. Even 1984 dollars.

Nobody said they built totally new R-390A's. They sold them to the government for $38,500. They (Fowler Industries) were formerly Capehart who built R-490A's, and Clavier, who manufactured R-390A modules for a government spare parts contract. They used "bits and pieces" to paraphrase, and assembled the R-390A's for that 1984 contract. There is much more to it and I'm not going to waste anymore time detailing nuances to this group. I just wanted to clear the air so to speak and inform the uninformed. Usenet has always been a place to walk the walk, but never talk the talk. I know who you are and you are a very experienced dx'er. The gentleman who wrote the articles is a well know archivist/historian.

Different strokes for different folks.

Harold

Harold.

I hate to be overly 'picky', but read what the seller says in his description:

He refers to 'new' in several places.

Jumping Jesus Christ, you are thick aren't you?

The excerpts from the articles said many of the parts were "new,"
mechanical filters, potentiometers, meters, tubes, etc., etc. They
(Fowler) did manufacture the rear panels and other items. The rear
panels had a "certain" identifying mark on them. Fowler was a defense
contractor that manufactured many other items for the government and
had the capabilities to do so.

Get over it and listen to nibi nibi again, or that heterodyne from
Pitcairn Island.

Harold

Of course, that won't stick until you point out that
rec.radio.amateur.equipment is not a buy and sell newsgroup.

It was created for the discussion of amateur radio equipment.

Ultimately, any ebay ads here are off topic because they are
ads, no different from someone trying to sell their ham equipment
directly.

  Michael

From the site I get this about the solder:

From the Manufacturer
Weller 7200PK Lightweight Solder Gun Kit has a single heat gun producing 75 watts of heat. Kit contains 7200 soldering gun, coil of lead-free solder, 2 tips and an instruction leaflet.

Product Description

Soldering Gun Kit 75W Gun 40/60 Rosin Core Solder 2 Soldering Tips.

Notice how the top says LEAD-FREE solder and the botom is 60/40 which in most places indicates 60% tin and 40% LEAD.   Now which is correct ? As if it really maters to anyone.

They might, but my (perhaps limited) experience with Icom was that
pretty much any part you wanted, they'd sell you, and they
weren't *that* expensive.  It's certainly worth a toll-free
call to find out, IMHO.

I have a so-called "modified sine wave" inverter that is connected to 200+ amp hours of deep discharge battery located in about the center of the house in the basement. About a 30-foot length of #14 wire goes to an outlet box in the shack, down on one end of the house, and provides 110VAC (of a sort) when the power is off and I don't feel like hauling out the generator. :-)

Trouble is, whenever I turn on the inverter it spews harmonics all up and down the HF band and makes it difficult to impossible to hear weak signals.

I realize that a pure sine wave inverter would mostly alleviate this but that's not gonna happen any time soon... meanwhile is there a filter I can apply to the output of the inverter to round off the corners of the modified sine wave (which is really nothing but a stairstep square wave) and eliminate the worst of the harmonic noise?

Thanks...

Look in old ARRL Handbooks, or even their old Mobile Handbook.

A lot of the things about alternator noise would seem to apply
to such inverters, and even switching supplies. But it seems like
such coverage is much smaller nowadays than thirty or so years ago.

Figure out whether the signal is radiating from the chassis, or from
the output wire. If it's the former, it needs better shielding. If
it's the latter, add feedthrough capacitors in a box that shields
the output, and maybe put an LC circuit in series with the output
line, and tune it for a null. The primary of the inverter may also
be a source of noise, you need to figure that out first.

Shield the inverter and the battery together,
put an ac filter made for computers on the output of the inverter were it exits
the shielded enclosure, and ground the shielded enclosure to earth. You should
see a big difference in noise...

Good afternoon, Michael.

Yeah, I gave away a stack of my old Handbooks a while ago... XYL got tired of looking at them in the garage (hadn't finished setting up the shack yet, and still haven't...). :-(

Well, square waves have a lot of harmonics, and perfect square waves have infinite harmonics (but there's no such thing as a perfect square wave so in the real world harmonics are finite). If I can file off the corners of the stairstep wave that really should help cut down on the harmonics.

Someone emailed me and recommended a brute-force EMI filter (thanks, Dave) so since that's easiest I'll probably try that first then take things from there.

meanwhile is there a filter I can

> apply to the output of the inverter to round off the corners of the
> modified sine wave (which is really nothing but a stairstep square wave)
> and eliminate the worst of the harmonic noise?

It is generally quite easy to construct a filter to eliminate the square wave component[s] in an approximated sine wave.

First, determine how many steps are used, what is the frequency of the square wave, in one cycle to make the 'sine' wave?

Second, a three stage pi-filter is designed to severely reduce the conducted interference.

The first stage is series resonant at the fundamental square wave frequency and is across the hot line to return [not ground].

The second stage is parallel resonant in the both paths after the series filter.

The third stage is identical to the first stage, but located at the output of the parallel resonant filter.

```
                --L--
---------------|     |---------- [Hot]
            L   --C--   L
            |           |
            C           C
            |   --L--   |
--------------|     |----------- [Return]
                --C--
```

NOTE: The Return must be an isolated wire just like the Hot line. The return line MAY be connected to inverter chassis by a 'zero current' carrying connection [approximately 50 Kohms] ONLY at one point.

It will take a little effort to locate suitable cores for the inductive component. The capacitors can be electrolytic up to several 100 KHz. The key is to establish RESONANCE at the fundamental component of the square wave.

An alternative may be to replace the square wave generator with a simple op-amp and power stage configured as a WEIN Oscillator. A Wein oscillator has negligible harmonic component. One op-amp and a couple of transistors should do the trick.

Hi,

I have just purchased a HP8753A VNA and need some help setting the thing up.

I want to start off just measuring impedance of lumped components but I cannot get any sensible readings. I have tried all sorts of Calibrations from the operation manual but still no luck.

I have the HP85044A Test Set and the 50 Ohm Calibration set.

I am trying to connect a coaxial lead to the Test port on the Test Set and so a 1 Port measurement. I have tried both RESPONSE cal and 1-Port Cal and placed a short,oopen and 50 Ohm load at end of the coax and then after calibration I place a leaded cap but do not get anything like I see in RF books I Have.

Any help much appreciated.

Regards

David

Anyone know of a troubleshooting guide for the HP 8640B?
My display reads all zero's although the generator is putting out a signal
just fine.  I'd like to find a step by step guide that would lead me to the
```

```
defective component.

Thanks K. I should have said I have the manual but was hoping somewhere there
was one of those flowchart guides that leads one through to the right
component. I was hoping to avoid having to learn how all those digital
circuits work in the counter section.
I was sort of thinking maybe somewhere in HP docs there might have been such
an animal, for the HP techs to use.

This guy has the service manual for sale for $8. If you only have the
operating manual, this may give you what you need.

http://home.comcast.net/~aa4df02/hp.htm

Hello,

I've got a Daiwa CNW-518 antenna tuner, and it's absolutely impossible to tune any kind of antenna. The SWR only gets worse when I use the matcher.

A friend advised me to check the capacitors, because they might have dried, and I opened the box to see if I could read values off them. But the numbers written on them gave me no clue. (I have to open the box again to copy them off, tell me if it's necessary)

Googling for the schematics, I only found reviews (good ones, mainly HI) and comments about the tuner, but no actual reference. Does anyone know where I could find more information? I'm thankful for any advice.

Greetings

bram

I have several solid state inverters (12-24 vdc to 110 vac) and they all generate serious hash. Doesn't matter what I run; radio, TV, anything audio, sounded terrible. Been like this for years and years. Inverters are nice and higher efficiency and for things like incandescent bulbs, drills, etc. I even ran a small air conditioner off a large inverter and 24 vdc out in a shed on land where there was no utility power.

I would like to hear from guys who actually built "filters" and got "nice" AC, as determined by actual performance and not "the fundamentals say you can do this."

FWIW, FYI....

What I got recently was an old dynamotor from Fair Radio Sales (Lima, Ohio) that goes from 24 vdc to 110 vac at 60 cps (yes). Its in their catalog. Its only 50% efficient and puts out about 300 watts of AC at about 600 watts DC (24 v at about 24-27 amps) input, but the output is very clean. I tried several radios and no hash at all !!! (I did not listen on ham bands with RF gain up, but AM radios, on broadcast band even between stations with volume turned up were clean).

Running full speed, these things sound like an electric drill. For me, its going to sit in the garage and I'll run an extension cord into the house if I need this kind of clean AC. Running no load, the dynamotor ddraws the full 10-12 amps at 24 volts, and as you increase the load, the DC amps go up in proportion to the load.

The commutators on these units had oxide on the copper and so you need to rotate the armateur to start scraping off the oxide, then the thing will take off under DC and the heavy carbon brushes will completely bring a shine to the copper.

These dynamotors will turn on 12 volts, too, and put out about maybe 50-65 volts AC at a little slower frequency. 60 watt light bulb lights up to a dim level.

IIRC, they weigh about 50 lbs, cost about $65-70 now.

Out at the end of my driveway i need to use an electric weed eater and so I load the dynamotor into the trunk of the car, with two deep cycle marine batteries, and buzz away. Too far for extension cords, no matter how I do it. Don't like gas engines, noise, flamables, etc.

How about picking up a line/power conditioner from ebay? Those tend to go for reasonable money, and are meant to clean up dirty power lines. Should do admirably cleaning up most of the square wave noise in one of these inverters. Perhaps even an ordinary isolation transformer would cut a large percentage of it, especially if you place a simple line filter on the output. You could check this to some extent using any step down transformer and looking at the output on an o-scope.

How about you just TRASH, all that cheap Inverter JUNK, and spend a few bucks on a nice SineWave Inverter, in the first place. No Square Corners to generate harmonics, and nice cleam Ac Power to run the stuff you need. Myself, I use a nice Trace SW4024 to power the cabin, and all the stuff that the normal Grid Supplied folks have in their places. I just can't run the ClothesDryer, without the genset running, due to it being a 240Vac Load. I usually have a Ambiant Noise Level of less than 2 S Units on the MF and HF Bands, as well as the Marine Bands. Never can tell if the Inverter or generator is suppling the power from the noise level.

If anyone is interested in a really cool vintage weather station that was
removed off a ship I have one I'm auctioning off. I had this in my radio
station and it gives that really neat look as well as it really works.

Why pay anything? Most old HP manuals are available for free on the HP/Agilent website.

Go here to search for available manuals:

<http://www.home.agilent.com/agilent/facet.jspx?lc=eng&cc=US&t=80039.k.1>

Go here for both the 8640B operating and service manuals:

<http://www.home.agilent.com/agilent/techSupport.jspx?pid=8640B%3Aepsg%3Apro&pageMode=MN&cc=US&lc=eng>

Hi.

I am am totally new in FM electronics, so I need a guiding hand (advice).

I would like to build a small transmitter that would send only a few bits, ant then a receiver that will capture those bits on the other side.
The usage would be similar to those wireless doorbells. The difference would be only in that I want to assign a unique code to be transferred so the receiving station would know who was the sender.

Can someone suggest me some book or Web site where to find more information on how to build those devices. (are they maybe available to buy?)

Thanks.

I finally replaced my trusty old Icom 735 with the Icom 7000. I can't say that it hears signals that the 735 does not. However, the noise reduction is great, especially on static-y bands like 160, 80 and 40. The learning curve is steep -- so many menus everywhere. The manual is very detailed, 150 pages, but it has no alphabetical index, which has had me pulling out hair trying to locate instructions on this or that. I love the digital filters on the 7000. Nothing extra to buy, altho' the mike needs to be replaced if you want your audio to sound decent. Glad I bought it, tho' I wouldn't mind a few more knobs and less menus. Still, it's working out fine for a fixed use radio. I put all the local 440 repeaters in one bank of memories, the 2 meter repeaters in another bank, the 6 meter frequencies in another bank, and I still had two banks left for various HF frequencies, including the new 60 meter band.

I had been leaning to a 746pro, but got scared off by the eHam reviews on blown diodes & finals and whatnot.

By the way, the Astron 25-amp switching power supply is very quiet and a nice match for the 7000.

The 7000 is a good buy at $1299, but I notice the current $200 coupon expires on June 30th, if you're interested in the radio.

My TM-V7 resets every time the power goes off. Anyone know what kind of back up battery it has and where it is?

Thanks,
Al WB7NXB

I think the diode/blown finals problem was addressed early on in the production cycle of the 746PRO. You might check the dates of those reviews on eHam. I've been running a 480 for a couple years now and really like it. It has no extra filters. I would like to try a 746PRO, but I don't have the budget for two rigs and don't want to give up the 480SAT. I have heard a few 7000s on the air and with the right mic (SM-20) they sound pretty good.

73,
Ed KA9EES

I was told since this radio doesn't have a makers tag on it, its a kit Neutrodyne radio from the 20-1930's (5) 201 tubes. They are in good shape not broken. The cabinet can use some refinish work. The radio is about 2.5 ft long. SORRY I have no pictures of the radio.

This radio is not restored in any way. It can be left as is OR restored.

I am open to trade for a HF radio.

Look similar to anything here?  http://www.radioblvd.com/20sRadio.html

If so, sounds like you have a REAL collectors item ...

Hi all,
Anyone who knows if there is a working version of the DLPORTIO for Windows Vista?
(DLPORTIO is used by a number of Log softwares to utilize the parallel

port for e.g. CW keying)

cheers,
Hans - SM�IMJ

I have a 75 watt UHF Micor repeater with duplexers currently on 451.???. It
is 100% operational and ready to be put into service.
I'm looking for $400 or trade for other equipment.
This is for pickup only SE, Pa..
I'm looking for Ham gear, Motorola VHF programmable, or a aircraft portable.

Question - on the original IC706, does the TUNER/CALL SWITCH work? Or do I need to switch/jumper something under the hood to get it to work? On my MK2g it works just fine.
Any thoughts?

You may need a cable to run to a compatable tuner. What tuner are you using?

Kenwood TH25/45AT battery like new. This is a W&W Assoc. replacement

battery:
Part#WC-035(7)
Kenwood part#KNB5
This battery is in excellent condition with very little use.
It lists for $51.00 on W&W.
You can have for $35.00 plus shipping.
Also the W&W Assoc. Mastercharger1 charger cup, list is $25.00 for this.
$15.00 plus shipping. This is charging cup ONLY, not the entire charger!!!
Or both for $50.00 shipped.

USPS money orders only.

WANTED: SCHURR Einhebel or other Single-Lever Pad

I am looking for a Schurr model Einhebel or other single-lever paddle/
key. I am thinking in terms of the European type paddle with the heavy
metal base. It should be in good operating condition. I would also
consider a BUG.

Thanks,
Bill

I am looking for a Kenwood TH-215 2 meter HT. If you have one that is
in reasonable in price and condition (working and not scratched up too
bad) please let me know. I'm not concerned about the battery life as I
could always replace the battery pack.

Leave message here or email me wt w0cbf@yahoo.com.

Thanks for reading

It should be the same for each radio. The AH4 is a really nice tuner. I
use mine portable and found that it works well feeding a vertical with
radials elevated rather than just a rod stuck in the ground. I am
assuming that you are using the control cable that comes with the AH4. I
have had difficulty with my 706MII and the tuner when I did not push the
control cable plug all the way into the radio. It seemed like it was in,
but it needed another push to seat the connectors.

Hi. Anybody out there have a schematic of the Midland 13-500 2m FM
transceiver? I would like to know the value of resistor R127 in the TX
exciter chain. Am trying to repair one of these old units, and that
resistor is fried. Would appreciate help in identifying it. Thanks.

73,
Joe K9LY

I have a HM-133s mike that has a bad push to talk button problem. I
found that the switch, S1 on the pc board has failed. I am looking for
a replacement switch to restore this unit back to working condition
again.
Where can you buy a switch to fix this unit?

Hey Brian, if I use your pre-production-stage-for-almost-a-year-now
processor to ask why you refuse to post your now defunct non-linear
linear, like I've been doing for over a year, would you be able to
hear me THEN?

WOW, that was FAST!!! Is that all you do? Sit there in your parent's
basement waiting for someone to order one of your hack-jobs when you
can't even give an estimate on when they will go into full production?
Don't you have anything better to do? I mean, heck...... look at posts
from yesterday afternoon, one of the biggest national holidays, when
just about everybody can find something to do besides jerking off in
front of a computer. It seems that the only people who posted were you
and the trolls. And yet, even with all that spare time because you
couldn't drag your ass away from the computer and out of the basement
long enough to join the rest of humanity in a barbecue, you AGAIN
refused to answer the tough question, just like you have done for
several years now.....

Where's the schematic for your hacked amp, Brian?

Oh dear, are you selling oscilloscopes and test sets in order for buyers to
set their radios correctly?
You really don't have any technical knowledge. All you seem to do is
re-sell boards made by other companies.
You should see what people are saying about you in other groups, you have a
terrible reputation.

Hmmm... what company am I buying boards from?
Maybe I can stop designing... and just get the boards from them... lol

Thanks for your comments... they were quite amusing.

Gregg,
There is no excuse for how many out here conduct themselves... but
there are reasons.
The main reason is that they have nothing of merit to add to any
conversation here, but desperately need to be recognized.
Thanks for your comment.

Why don't you ask Twistedhed about that one. I fought him for years on
a political issue only to find out that I was wrong. I still disagree
with his freebanding, but when I'm proven wrong, at least -he- knows
that I'll stand up and take my punches.

I'm giving you a chance to prove me wrong, Brian. If you product works
like you say it does, and it doesn't cost you any money, why in the
world -wouldn't- you be willing to sell me one?

>P.S. How's your master's degree from the College of Culinary Arts
>coming? Did you ever perfect your french pronounciation of "Do you
>want fries with that"?

No, but last March I did finish a study on EM wave interference pattern and polarization interactions in atmospheric media of varying ionization. It was a joint project with the meteorology department in the study of weather radar, with extended applications to satellite communications. Got any opinions on the subject, Brian?

Oh, and where's that schematic for your non-linear linear?

Absolutely right. These are discussion groups, but some people would rather use them as their own personal media for spamming products that would otherwise be pulled from the market for patent violations and/or false advertising. It's truly shameful how these basement-dwellers act, isn't it, Brian?

I believe they would want to sell a new mike. I did find a button switch that fit the mounting. I thought the shroud was part of the assembly but it was two pieces, the switch and the shroud that held the it. It is now working again with an investment of 32 cents. Not bad for a little time on the bench... Thanks, Bill Piper, N8PRC

I just added a new project webpage that has a lot of projects/info on
it.
Go to the projects link.
Check it out at: http://www.amateurradios.info

Thanks,
Bill

Die hard with a spam vengeance! (bruce willis is resurrected/bald too)

Brian is only about twenty years late with his CB noise toys, he might have
sold a gaggle of them in the 70's if he wasn't so busy with his paper route
at the time.

 "LOL"

Frank turned out to be a stand up guy with me. We had our troubles a few
years back, and resolved it. Life's too short to argue about cross posted
CB modulators!

 "LOL"

My math was a bit fucked up, but it's relative with 11 meters opening up
again. Fun band with fun people, if'n you have a good radio and antenna. (a
must)

Onward through the fog ---->

Hello,

I would like to invite you to a new discussion group on this HF Amplifier.
It was a big hit at Dayton 2007, and the reviews on eham sound very
positive.
The first shipment of these amps will be arriving in the US in June and it

has FCC Approval.
If you have been exploring the purchase of a Solid State Amplifier or if you currently own one, please join this group.

http://groups.yahoo.com/group/SPE_Expert1K_Amp/

I have a quantity of NOS Military surplus items listed here before going to the BIG 'E' :

34 WATT, WW, 140 OHM 4" L x .75" DIA. --IN ORIGINAL BOXES. HAVE 100+

100K OHM POTS -NOT LINEAR (IE: 50% TURN DOES NOT GIVE 50% OF VALUE),
USES A BAND OR WIRE WHICH IS SHORTED AS THE SHAFT IS TURNED. 3"L .250
SHAFT. HAVE 100+

SPRAGUE KOOLOHM 5W, 15K HAVE 30+

Will also have a few 1M + AC SWITCH, and an additional value coming.

1.5MF AT 250 VAC, HAVE 9

2 MF AT 600VDC, CD HAVE A VERY FEW

30 WATT, WW, 8K COMING

Can supply 1 to max number I have. Make offer- pay by MO, check, Pay Pal.

Advise of ur interest: heytubeguy@yahoo.com

Im trying to access a local repeater I have set my vfo 1 to the 145.6375 which is output frequency and -60 shift for transmitting with
a tone of 71.9 however when i check on my scanner the ctcss tone transmission is intermittent could somebody tell me the correct setting i need in the menus to make sure im doing it right.

Many Thanks,

Jonny

Also how do i scan for ctcss tone (i dont understand maual on this lol)

Surprised no one has posted on this topic yet; here goes:

My Kenwood TM-221 has a problem with the intensity of its PL tone
output level. Mine is too loud, generating frequent reports of "hum"
from others.

I have the original manual with schematic and block diagrams, but no
obvious information indicates where the output tone is generated or
adjusted.

Not being wizardly and knowing there are wizards hanging around here,
I'd like to know what pot needs adjustment to settle it down to the
right level, if one exists. Anyone?

Bonus question: I have the same problem with an Alinco DR-590; if you
can help me with that too, that would be nice.

TIA, KA1IOR

How do you know that this reported hum is CTCSS (67 - 250 Hz) generated and
not 60 Hz from your power supply ? What are you using for a power supply?
A failed LM-723 IC regulator in a linear power supply can cause this type of
problem.

Could you be getting stray RF into your audio chain??

Your Kenwood uses the TU-3A tone board, and there is only one pot on it.
It is VR1 and adjusts the tone output.

All the info you need is found at : http://www.mods.dk/
Service manual included, plus schematic..

The TM-211 service manual can be downloaded from www.mods.dk - it has the schematic and the procedures.

As I understand it, this mobile's tone generator is on a separate, optional plug-in board, designated TU-3A. The board has a set of DIP switches (which set the transmitted tone) and a small potentiometer. It looks to me as if the TU-3A tone board plugs onto the "B unit" PC board, which is on the bottom side of the transceiver.

The alignment instructions say to adjust VR1 so that the transmitted signal deviation level (tone, but no other audio) is around .65 kHz (650 Hz). This is consistent with recommendations I've read for other radios and seems to be good practice.

>Bonus question: I have the same problem with an Alinco DR-590; if you
>can help me with that too, that would be nice.

I've been told that in at least some Alinco radios, the CTCSS tone level is set by a fixed resistor on the PC board (it's not intended to be adjustable via a pot), and that it's set too high.

FOR SALE: 2 Kenwood TS-480's , TM-D700A Mobile rig
I have 2 Kewood TS-480's for sale. All are in excellent condition and I aam the original owner of both. They have less than 20 hours on each. I have box for one but the other has diappeared. They come with mics, separation cable and Mounts. I can supply manuals and software for these on disk.

1. Kenwood TS-480 SAT $800
2. Kenwood TS-480 (200 watt) $900
3. Kenwood TM-D700A 2 meter & 440 mobile rig, cross band repeat. I can provide programming software and manuals plus supplementary manuals on Disk. $375

Reason for selling I am dealing with cancer and haven't had the interest in amateur radio.

kb4i@comcast.net,

Dave & KA1IOR-

I've seen alignment procedures on older commercial radios, where there
was no adjustment. The procedure was to merely verify that the CTCSS
tone's deviation was between 0.5 and 1.0 KHz. I don't know the official
spec, but 0.65 KHz would be a good choice if it is adjustable.

The key is to measure the actual tone deviation, not just rely on hum
reports. Any given repeater may not be filtering out the tone as it is
supposed to. (That same filter should reduce 60 or 120 Hz hum as well.)
A repeater that transmits tone, should be regenerating it, not repeating
the input tone.

It may be difficult to measure the exact frequency of a CTCSS tone, but
you should be able to sync your oscilloscope to 60 Hz line frequency,
and observe whether the received "hum" is drifting or not. (You could
sync the scope to a CTCSS tone generator if you had one.)

$60.00 Each   Midland 70-340 VHF APRS/Packet Radio   [Plus Shipping]

I have a quantity of Commercial Midland 70-340 VHF Mobile Radios 25-30 Watts O/P comes with a Regular Power Connector, Mobile Mounting Bracket and a Midland 70-2301 Palm Mic (which you don't need if you are only using APRS or packet). These radios will work excellent as an APRS Mobile OR Base Radio Station. Using this radio is much cheaper to use for dedicated APRS use rather than spending Large Dollars for a VHF Amateur XCVR and dedicate it to One Channel APRS use. The radio is Programmed and Tested Operational on 144.390 Mhz.

IF you wish the Power Cable pre-wired c/w a DB-9 Male   [ADD $20] > ready to plug into a Tiny Tracker APRS Unit or any External Interface < Schematic Drawing of the Interface Cable is supplied

Midland 70-340 VHF Service Manual available on CD with a Radio [ADD $10]
Sold Separately [ADD $15] includes Mailing

These radios are capable of 36 Channels and comes with a CTCSS Board, should

you need it.   I can program them for other 2 Meter Frequencies for a
charge.   Please ask should you have any questions.

Thanks for looking....Norm VE3CZI

I used to have one of those rigs..........I am pretty sure that the TM-221 has encode capabilities out of the box. The optional board would be for PL decode. As mentioned earlier, there should be a pot for making this adjustment. If you have the schematic, take a look at the Tx VCO. There should be two pots that feed the audio to the varactor diode. One of them will be for setting deviation from the mic input, while the other one will be for setting the PL level.

Pete

I have to replace a rig that was stolen and I'm down to four radios to choose from. I haven't been able to get to a dealer yet to set down and actually try them out but have narrowed my choices down to four with preference of those down to two. If anyone owns some or all of the radios mentioned here I would greatly appreciate your input and experience with their operation. The two that I am closest to getting is:

Kenwood TS-2000 or the ICOM IC-746PRO. I do realize that the 746PRO does not have 440MHz like the TS-2000. I like the IC7000 but such a small radio that they fit so much into it with using so few knobs and buttons on front that I'm concerned about the learning curve with that one. I'm naturally concerned about durability, receive quality and the ability to reduce interference and pull out the weak signals in a crowd or busy band.

Right now the Icom 746PRO has the incentives on it's side with not only rebates, coupons and a free Power Supply.

I appreciate your input concerning these radios.

Gary,

It depends on what you want to do. The TS-2000 is a Swiss army knife sort of rig. It is great for satellite operations, and it is a favorite of people who do digital modes heavily. It is a good, but not great HF rig. For serious VHF and UHF operations, most people use a good RX pre amp for satellite or weak signal work. Lots of menus to dig through, though there are a few cheat sheets around to tell you how to do specific things. Also, the Sky Command, now legal in the US, is a very cool way to operate remotely from you HT or mobile.

Both of the Icoms will be better HF rigs, and will certainly do digital modes as well. There are a lot of IC-7000s out there due to some dealer incentives. As you say, it has a bit of a learning curve, with some of the locals forming what amounts to an unofficial users' group to swap ideas. However, it does work very well, though the stock microphone does, in the opinion of many, need to be replaced, or have a simple modification done to it. Two locals who replaced their 756's at Dayton with the 7000 are, after a bit of initial frustration, glad they did. They also like the modified microphones, which in A/B tests with the originals sound much better. http://www.7000mic.com/
So talk to people on the air, and if at all possible try operating.

FWIW

I skipped all four of these radios -- and will buy the Elecraft K3.
The Dayton interest by the "Big 4" was very interesting to observe their
representatives (and reactions) -- features and capabilities at this price
point -- they do not have -- and are not designing for.

A colleague bought the TS-2000 -- have not heard reports of his assessment
yet.

CLOCK: No
TUBES: 10 including xtal calibrator.
PHYSICAL CONDITION: 9.5 out of 10 (chassis isn't quite perfect and s-meter plastic has a couple of very minor scuffs on far right). The front panel, cabinet and speaker/cabinet are in unbelievably beautiful condition. You are almost guaranteed to do a double-take when you first see this receiver.
OPERATIONAL CONDITION: Works well. I have been using this as one

of my SWL receivers for several years now. Bandswitch is slightly
noisy on 20BS band - I ran out of contact cleaner/degreaser while
treating the bandswitch. S-meter drifts a little with time but it
has never bothered me.
OTHER THINGS INCLUDED IN THIS SALE:
Original Instruction & Service Manual, includes XC-100 Crystal
Calibrator supplement and schematic.
Repair Ticket dated OCT 9, 1970.
Owner's personal listening log from the sixties.
Original Hammarlund shipping carton for this S/N receiver.
PRICE: $265.00, Cash or US Postal Money Order.
LOGISTICS: Buyer to pick up equipment, located in St. Mary's
County, Maryland. I do not recommend shipping this equipment.
REFUND: This sale is final - no refund.

You are welcome to come by the house and test-drive this neat
little receiver. Drop me an email and we'll get you into the
restricted tech-control spaces.

I just built a new amateur radio website and it includes ebay auctions
for radio equipment. It also has some articles about the top three
manaufacturers of ham radio equipment and the latest in ham news from
around the world. Check it out:
http://www.amateurradios.info

Come in and browse and go to the contact page and tell me what you
think, suggestions and comments would be appreciated.

Thanks,
Bill
W5GRX

Hi,
I need an Windows XP driver for my USB to Serial adapter.
It a big blue plastic box and on the card it say's; TEAN T1 94V-0

Anyone with an idea?

cheers,
Hans - SM�IMJ

My phone number is (714) 840-1403;  Cell is 714 287 8694
I have an old M-1 in operation. I also have a Garmin 250 XL in the
bird with a moving map that is a piece of junk and impossible to read
in anykind of day light.  However, I believe that two systems are
better than one.  What is the age of the chip set update?  I have been
contemplating an up grade to an M-3   I would then be stuck with all
GPS but with an M-3,  I would retain the ease of being able to read
the darn display with sunlight in the cockpit.   What will you accept
for the set?

I have a Ham IV that when I turn on the brake the receive signal takes on a 60 or 120 hz hum . I though it might be the control box too close to my Icom 746 PRO. I have a switch box connecting two lowband wire antennas and a triband beam to the Icom. If I listen to a signal on the wire antennas I do not get the hum modulation on the incomming signal when I rotate the beam.   Those coax wires are not near the rotator wires.   This tends to eliminate the transfromer of the rotator box from getting into the Icom by magnetic coupling. If I switch to the beam , then turn the brake on the rotator box I will get hum modulation. The triband is fed with some Davis Bury flex (foil and braid shield coax) and the rotator wires are taped to the coax for a distnce of about 100 feet.

The antenna does not have to ratate, just mashing the brake release button will make the signal hum modulate on receive.

The Icom is being powered by an Astrom 50 amp supply and the rotator plugs into the 120 vac outlet.

"Gary KW4Z" <kw4z@charter.net> wrote in message news:C29E6C68.1B15F%kw4z@charter.net...

>I have to replace a rig that was stolen and I'm down to four radios to choose from. I haven't been able to get to a dealer yet to set down and actually try them out but have narrowed my choices down to four with preference of those down to two. If anyone owns some or all of the radios mentioned here I would greatly appreciate your input and experience with their operation. The two that I am closest to getting is:
>
> Kenwood TS-2000 or the ICOM IC-746PRO. I do realize that the 746PRO does not have 440MHz like the TS-2000. I like the IC7000 but such a small radio
> that they fit so much into it with using so few knobs and buttons on front that I'm concerned about the learning curve with that one. I'm naturally concerned about durability, receive quality and the ability to reduce interference and pull out the weak signals in a crowd or busy band.
>
> Right now the Icom 746PRO has the incentives on it's side with not only rebates, coupons and a free Power Supply.
>
> I appreciate your input concerning these radios.
>

I made the same decision a few months back. The ts2000 will do many things the Icom will not . The Icom has a beter receiver for the low bands. I think the ts480 requires extra filters to be bought if you want them where the others have them (or really the electronic equivelent except beter) .
I did not care about all the thinks you can do with the ts2000 and wanted a good HF receiver so I went with the Icom 746pro. I do weak signal vhf and uhf and have seperate rigs for those bands so not haveing the 440 band was not big deal to me.
There does seem to be some problems with the back light on the display of the Icom so if you go with that rig run the display brightness full on or full off.

I just went through the same decision-making process and I chose the Icom 746PRO. I was apprehensive due to the problems rumored throughout the net, but I trust Icom and their ability to have already addressed those issues. So far, I made a great decision. I have never actually used any of the other rigs on your list, but I am not a fan of any Kenwood made in the last decade. The Yaesu was on my list, but a little out of my price range.

I, too, didn't really need 440 since I have that on another rig. one thing I will need to purchase is a duplexer since 144 MHz and HF are separate antenna connectors. The problem is my 6M antenna is part of my VHF/UHF antenna (tribander), so the duplexer is necessary in my case.

The rig was smaller than I thought, which is a good thing. I'm not impressed with the PS-125. It makes a slight high-freq while while on, and gets annoying. It's a cheap switching supply in a nice case. I had rather have a linear power supply. Oh, well! The rig is also built VERY well. Very solid feel to all knobs and controls. Not crazy about the display (rather have an IC-7000 type display on it-color!). One last complaint...comes with a cheesy hand mic.

Don't get me wrong. This is a great radio. I also have a Yaesu FT-757GXII, FT-767GX, and Kenwood TS-940SAT. This was obviously a step up from what I had, but I actually have likes and dislikes about each one.

Prentice, N4VBH

I'm looking for a 'one-touch' voice CQ caller to save wear and tear on my vocal cords. My Kenwood TS-570 has an optional 'Digital Recording Unit' available that I have a few questions about.

From the manual it sound like you have to manually turn xmit on, then push one of the 'CH1/2/3' buttons, then manually turn xmit off. Not exactly 'one-touch'. (Is this correct?)

But, if your in VOX mode, then pushing one of the 'CH1/2/3' will automatically activate xmit. (Is this correct?) This does sound like 'one-touch'.

Is there some Kenwood bulletin board where this question would be more appropriate?

You can run AX.25 packet and APRS. That's about it. Nice radio
though.

I responded to Ted by private e-mail. I forgot that the TH-F7 is the same as the TH-D6 in the U.S. I was thinking of the TH-D7A when I responded. The correct answer is that the TH-F7 cannot decode any digital modes, but it could of course be used as an ordinary SSB receiver with a computer soundcard to receive most digital modes as long as you could obtain an adequate signal on the TH-F7.

Is the optional YK-88SN-1 SSB filter worth buying?

What do the add-on filters do anyway? Are they an improvement over the
original filter, or do they just give you an optional bandwidth?

Bob-

I have that filter in my TS-690S (A TS-440 with 6 Meters). I can't say it is an "improvement" over the original filter other than as an optional bandwidth. To me, it is worth having the narrower filter when the band gets crowded, and it helps a little with noise as well.

I understand the TS-570 has Audio DSP filtering. You may not need the
noise reduction of a narrower filter, but Audio DSP won't remove
interference from stations on an adjacent channel.

I am guessing that the diode bridge rectifier in the control box is
acting as a mixer and adding the hum to stray RF signals conducted down
the control wires. You might try placing .01 UF capacitors accross each
of the rectifier diodes inside the control box.

I've had some luck reducing ignition noise on 2M in my MGB by putting a few
'clip-on' ferrites on the low tension side of the ignition circuit. (The
tachometer uses a current sense rather than a voltage sense, so the raw coil
current runs into the cockpit.)

Would ferrite also help on the spark plug wires? BTW, this is an old car
with points.

Thanks, w9gb

I have the manual for the R3, and I think the variable capacitor/motor is OK. The part that needs replacing is a small coupling block between the actual SO-239 feedpoint and the stubs that go to the ring. The parts list calls it a matching network assy., so it must contain some series capacitors, or something. I contacted Cushcraft with no success...too old of an antenna.

Anyway, I will probably be moving to a GAP antenna. This one has served an OK life.

Thanks,
N4VBH

In the 'Olden Days' of my youth we installed 10K ohm snap on resistors to the plugs on MGAs, MGBs, TR3s and my trusty TR-4., They also worked on family sedans, pickup trucks, and station wagons.

I don't know if such devices are currently manufactured. But, the Autolite web page still lists resistor plugs. A 5K series resistance will work wonders for spark plug noise.

If you have a DC generator as opposed to an alternator you will need to bypass the high current connection at the generator with something like a 1 uF coaxial capacitor.

These two engine noise suppression techniques should cover 90% of your engine noise issues in the older vehicles.

/s/ DD, W1MCE [HF mobile for almost 50 years beginning with a 1953 Studebaker, followed by a Renault dauphine, followed by the trusted TR-4, followed by babies and station wagons.......]

OK, likely a couple of 47 pF doorknobs (or about 86) could be used for replacement.

per Joe

Hi Tom,

You're in luck. I have one of the largest (if not the most complete) collections of Cushcraft assembly manuals etc. anywhere.

According to my notes, the lowest capacitor, the one closest to ground is around 78 pFd and the upper one is around 138 pFd. I'm sure anything near that value will be sufficient.

73,

Joe, W1JR

Someone posted "I sold a bunch of them so why don't you just shut the fuck up!"

How rude!

Like some of the profanity one hears during some CB communications?

Will always remember our English language teacher, who said "Cursing is a demonstration of ignorance and an inability to express oneself without descending into profanity"!

I have been away from fhe hobby several years. I am now disabled and want

get some of my radios going again, and upgrade my license, N2NJK, to allow

increased band privileges. I have a brand new HTX-100 10 meter unit

purchased when they were discontinued. It was bought cheap as it had no

microphone. If I am fortunate enough to rceive a heart transplant (I'm being

evaluated for viability in 2 weeks), the period before and after surgery

will be a perfect time to get back on the air. If anyone has one that works,

and can let it go cheaply, please let me know.

Thanks & God Bless.

Raymond A. Miller, N2NJK

Two similar rules when you are losing an argument:

a) shout louder ... it clearly establishes that you are unreasonable.
b) use the language of the gutter ... it clearly establishes that you are ignorant.

I'm looking for a good reference for amateur frequency 'convention', i.e.: were USB is commonly used, where LSB is commonly used, where AM is commonly used, where RTTY is commonly used, where FM is commonly used, etc. (NOT just what's legal on what frequencies.) Surely some one has come with some kind of chart or table.

Bob for SSB Convention: By tradition, 20M and up is Upper Sideband, 40M and below is Lower Sideband. An exception is the new 60M Ham Band -- use USB. This protocol came about as a matter of convenience in early SSB transceiver design and has remained to this day. And yes - you can operate either sideband legally where phone is allowed. And yes you can operate CW on the phone bands -- but best stay with the protocols.

As to useage several references- see URL's

Anyone know the style of 75 ohm FM coaxial jack found on several
FM tuners (JVC, Sony)? It looks like an unthreaded F connector
(female) but is larger. I'm trying to connect it to RG-6 coax with F
connector.

At first I thought it was a PAL (Belling-Lee/IEC169-2) socket. A
trip
to Radio-Shack for a PAL-to-F connector didn't work. The barrel is
larger than PAL and the stinger is more narrow.

Based on physical measurements the tuner jack seems close to a 'G'
style. If so something like an Amphenol 531-40010
(http://65.244.34.140/pdf/257.pdf) should work but no distribuitors
seem to have one.

Am I on the right track and/or does anyone have any ideas?

Thanks.

Hi,
Has anyone compiled a working rig file for the EasyLog logging software
and the Yaesu FT-2000 (or FT-9000, CAT syntax is very similar).

cheers,
Hans/SM�IMJ

I have one of the CKB-74028 freg meters. With the manual that goes in
the bottom. Seems to be in good shape. The "dial hundreds" window is
cloudly and broken.. Looks like from age.

http://nj7p.org/history/lm.html

I have no cable. comes with the shock mount and manual.

Sherrill Compass Model AEG-1 U.S. Ordnance C121174 RESTRICTED Model
M-6 U.S. Ordnance 7067878. Manufactured by Sherrill Research Corp.
Peru, Indiana U.S.A. This is a military compass as stated in the
instruction manual: "The Sherrill Model AEG-1 is a compass of a
magnetic type designed especially to fill the rigid requirements
which are encountered in combat and transport vehicles."

Includes - 10 magnetic director pins . Mounting screws & nuts. The .

Instruction manual which shows an army tank in all illustrations.
Compass deviation calculator. Comes in original box -

I was given this item in a estate clearout. I don't know any thing
about it. Other than its new looking, in the box.

Please e-mail me at mkulyk@optonline.net

I would like to trade these items for things I need.

Here is my wish list

Nice HF SWR meter.

HF Tuner with build in SWR meter

Slinky Dipole

I am tuner poor, and don't run high power anymore, so this one is surplus to my needs. It is a high power tuner, with separate forward and reflected (SWR) power. I have not seen an antenna it will not tune. The unit is beautiful, only two little scratches on the top, otherwise it is like new. It has balanced output, 2 antenna coax connections, or will work straight thru for matched antennas. If you want a tuner that will works with high power, this is the one for you. $300.00. I will take paypal or a money order. What do you have for trade? Will consider trades.
Thanks,
James AD4VL

Kenwood TH25/45AT battery like new. This is a W&W Assoc. replacement battery:
Part#WC-035(7)
Kenwood part#KNB5
This battery is in excellent condition with very little use.
It lists for $51.00 on W&W.
You can have for $35.00 plus shipping.
Also the W&W Assoc. Mastercharger1 charger cup, list is $25.00 for this.
$15.00 plus shipping. This is charging cup ONLY, not the entire charger!!!

Or both for $55.00 shipped.

USPS money orders only.

Lots of parts from several Kenwood TS-520S radios such as the... Leather Handle ... Power Transformer ... VFO Tuner internal assembly ... IF board ... RF board ... Rubber Feet set ... 12BY7 Driver(tested) ... PA Cage with components ... Final Output Tubes (tested with TV-7D/U tube tester) ... Large & Small Filter Caps (tested for current leakage with Sprague TO-6 tester) .... Give me a quick Email for the part you need.... Please put your name & call sign in your email as I only deal with Amateurs...
Thanks,
Bob

I'm retired and going to be moving across country to smaller quarters and have a lot of stuff that I'd like to take with but reality is reality. I'm not under any pressure to sell and am interested in getting a fair price. I think the best way to get a fair price is to put it on eBay or some other auction. I guess I could have my own. I'm not intersted in low ball offers (and may not respond) or trades unless it's an older US made acoustic guitar by Martin or Taylor or maybe a US made 5 string banjo. This stuff has been in storage for 10 years or so and I won't have the time to do much testing, describing will take enough time. I've fired up few pieces in the last few months and all worked and I know some have problems, but I would say like Fair Radio in Lima, repairable. This is a partial list, more to come as I get into the storage. On most of the stuff I have a fair idea of its hamfest value which is generally lower eBay. I'll structure my eBay posting based on the most requests for a certain piece. email direct to:
kolesnik@sbcglobal.netski leave off the ski.

There also used to be "resistance wire" ignition wiring, but IIRC, it
was pretty fragile.

Sell it on eBay and you'll clear five figures easily. If this is what you've had in storage I'd love to see the equipment you're actually using.

-Scott

Hi All,
Is there a technical guru out there that can tell me how i can fix
this problem,
the TNC wants to open but then gets locked up and thats all it does,
manly used for aprs,
i have tryed to reset with button, software and still nothing, ,

Regards
Steve (VK2TSB)

In article <DFGxnF.Cr8.0.bloor@torfree.net>
bu765@torfree.net "Mike Corley" writes:

>>> ##: There were also a few other things said at the trial
>>> ##: relating to this which I won't repeat here; it was in the papers
>>> ##: at the time anyway. This quote and others said by and about this
>>> ##: witness were repeating things that had been said by and about
>>> ##: me at around that time.

When, where and by whom ? Let's have some details
that can be checked.

I'm not going to repeat them. They're hurtful to me because they contained abuse that was directed against me by someone else at the time and which got picked up and thrown again in the trial. It is a matter of record but I won't repeat it here.

>>> PM: >Who's character is being assassinated? It isn't clear from the post.
>>> PM: >Are we talking about Grenville Janner? I thought he was a spook
>>> PM: >himself? He's certainly able to hold his own on the issue you cite.

>>> ##: Mine, mainly. The reason for putting that episode at the top
>>> ##: of the posting is that they tried to kill two birds with one stone
>>> ##: at the Beck trial - they simultaneously put words into the mouth
>>> ##: of their invented "witness" to smear Janner, and repeated exactly,
>>> ##: word-for-word, stuff which had been said by and about me.

Why would "they" wish to assassinate your character?

Well, let's put it this way - just because this is the first time it's happened in this way, from these people, on this scale, doesn't mean that it hasn't happened before, on a lesser scale. At university there were people who quite overtly hated me and would have wished something nasty to happen to me. Because of where I went making the wrong sort of enemies is pretty deadly.

"They" would wish to assassinate my character because it had all been done before, and because they knew I would not be able to react in any other way than I'd reacted previously.

>>> ##: They invaded my home with their bugs, they repeated what I
>>> ##: was saying in the privacy of my home, and they laughed that it
>>> ##: was "so funny", that I was impotent and could not even communicate
>>> ##: what was going on. Who did this? Our friends on BBC television,
>>> ##: our friends in ITN, last but not least our friends in Capital
>>> ##: Radio in London and on Radio 1.

Please give details of when, where and by whom these
comments were made, so that they can be checked.

This was four, five years ago... sorry, I don't remember. I can remember individual incidents, words which were repeated by different people at different times in different locations.

Around the end of 1992 Private Eye rtan a front-cover with John and Norma Major, with the title "Major's support lowest ever" and John saying to Norma "Come back norma" on the front cover. What can you read in to that? Not a lot, seems like standard fare for PE.
The first time I saw it I was in the pub with some people from work. One was expressing doubts to the other (let's call the first one Simon, shall we? and the second one Phil?) about whether what was going on was right. Phil's answer was that if Private Eye was doing it then it must be ok, "they're usually right".

A few days later, again near work, there were some students laughing in the street,
"Were you COMING BACK later? But I thought you said you were COMING BACK ha ha ha?"
Play on words, you see. Not very nice, either. I had start medication soon afterwards.
Clever people, these chaps who think up PE titles. Just slightly lacking in any sense of morality.

>>> ##: How did they do this? I'll give you an example. About a year ago,
>>> ##: I was listening to Chris Tarrant (Capital Radio DJ among other
>>> ##: pursuits) on his radio morning show, when he said, talking about

>>> ##: someone he didn't identify, "you know this bloke? he says we're
>>> ##: trying to kill him. We should be done for attempted manslaughter"
>>> ##: which mirrored something I had said a day or two before.
>>> ##: Now that got broadcast to the whole of London - if any recordings
>>> ##: are kept of the shows then it'll be there.

What was the date of the broadcast ?
Out of 2 million plus listeners, why should you be
the only one that Tarrant was allegedly referring to ?

Sometyime in spring 1994. I can't remember the date, I heard the broadcast in the car - I was going into the office from London that day and just happened to snap on the radio, and hey presto! Mr Tarrant gives us the benefit of his excellent understanding.

>>> ##: That's exactly what we did. We went to a competent, professional
>>> ##: detective agency in London, paid them over 400 quid to debug our house.
>>> ##: They found nothing.

What was the name of the detective agency and their
address ?

I don't see why I should tell you that, but they're in Yellow Pages; they're a well-established outfit.

>>> PM: >What? Spend a quarter mil. a year to amuse themselves? And why not
>>> PM: >change every now and again? Why keep watching you? (Unless you _are_
>>> PM: >doing something, and I don't think you are, though you may have some
>>> PM: >deep, dark secret in your past.)
>>>
>>> ##: See the above.

Is there a deep dark secret in your past ?

Apart from "it's all happened before in a different way", no.

>>> ##: In a couple of cases people have even known my name - when I was in
>>> ##: London over Easter somebody (no idea who they were, just some bloke with

>>> ##: his girlfriend) called me by name - quite clearly, and my name is
>>> ##: distinctive.

Is your name truly Mike Corley, or are you using it as
an alias ?

It's an alias. I'm not English by ethnic origin. If someone manages to pronounce my name as well as that guy did then they must have been really trying.

>>> ##: There's a little story behind this. First of all, in 1992 I worked
>>> ##: for a company where the people made clear they knew what was going on,
>>> ##: first of all directly (the very first evening I was there I went out to
>>> ##: the pub with them and the Technical Director said to another guy,

>>> ##: "is this the bloke who's been on TV?" "yeah, I think so")

Have you appeared, or been reported by name on TV ?
When, where and by whom ?

No. Never. Not directly.

>>> ##: Also, in summer 1992 I went on a trip abroad to Europe by coach,

What was the name of the coach company and your date
of departure ?

It was a national express coach. At dover we boarded a ferry for Holland somewhere.
The company that organized the trip went out of business some time ago, so they won't
have records of passengers - so we can't get any corroboration from anyone else
that way. We tried all that last summer, ran into a brick wall.

The other thing is in summer 1992 I was visibly ill, so other people in the
party might remember that more than anyone getting at me on the coach trip.

>>> ##: >>Yes, this gets me. I think the answer is that I was set up by
>>> ##: >>someone. I was very aware when this started back in 1990 that I
>>> ##: >>was being painted as a "threat" to which people had to "react"

Why were you being painted as a "threat"; is this related
to a "deep,dark, secret" ?

Aaaarrrrgh. I think I should make clear that that's their created justification
rather than the real reason. They started harassing first and then came up with the
reasons for it.

>>>
>>> ##: I think I know who set me up.

Who ?

Someone who knew me some time ago. Someone who would have been able to talk this
little campaign into existence.

>>> ##: The bloke can't even control his own mind without medicine.

Is this true ? What is the medication and dosage ?

Yes, I'm afraid so. Sulpiride, 200mg a day. It's designed to stop people
coming up with the sort of ideas you've heard here for the last few weeks.
Give him a higher dose!!

In the long term it causes tardive dyskinesia, tardive dementia and general
nasty stuff to your brain. So it's three years of sulpiride talking to you here.

```

I have used DXBase from Scientific Solutions for almost 8 years. Logs, does DXCC, WAS, 10-10, etc automatically. It has the ability to look up QSL addresses from a CD. You can track WPX, DXCC, QSL managers, etc. You can add/delete QSL managers to the data base. It calculates range and bearing to a DX station. It will tell you the QTH of a DX station based on the DX callsign. You can post from DXBase to the internet. And much more ...

It has a QSL design file, I have 6 self designed photo QSL s in that file.

It has the ability to maintain numerous logs. I have my basic log - W1MCE.mdb, my mobile log W1MCE_m.mdb, my 60 meter log, and my special callsign QSL [W1L.mdb], all available at the touch of a key. If you notice the file tag, *.mdb, it is a Microsoft Access Data Base core program.

It is NOT freeware. If I recall correctly I paid $50 for the CY2000 upgrade and have not had any reason for further upgrades, although they are available.

I cannot comment on it's usefulness in the contest mode. I don't contest! I'm a Minister and my weekends have other priorities :-)

I hope you get other responses that present more options.

/s/ DD, W1MCE

Re posted.

I have used DXBase from Scientific Solutions for almost 8 years. Logs, does DXCC, WAS, 10-10, etc automatically. It has the ability to look up QSL addresses from a CD. You can track WPX, DXCC, QSL managers, etc. You can add/delete QSL managers to the data base. It calculates range and bearing to a DX station. It will tell you the QTH of a DX station based on the DX callsign. You can post from DXBase to the internet. And much more ...

It has a QSL design file, I have 6 self designed photo QSL s in that file.

It has the ability to maintain numerous logs. I have my basic log - W1MCE.mdb, my mobile log W1MCE_m.mdb, my 60 meter log, and my special callsign QSL [W1L.mdb], all available at the touch of a key. If you notice the file tag, *.mdb, it is a Microsoft Access Data Base core program.

It is NOT freeware. If I recall correctly I paid $50 for the CY2000 upgrade and have not had any reason for further upgrades, although they are available.

I cannot comment on it's usefulness in the contest mode. I don't contest! I'm a Minister and my weekends have other priorities

I hope you get other responses that present more options.

/s/ DD, W1MCE

I am selling my AL-811H Amp as I now have my DREAM PW-1 for the Icom Radios.
Asking $550...
The Amp has about 4 Months of use before I got the PW-1 All paperwork, box, etc..

This identical question was posted on rec.radio.cb:
-- answer provided there as shown -

> Barry wrote: Hello, I have a Dentron Clipperton Qro linear, it's setup for
> 220 volts, but
> I need to rewire it for 110 volts, is there anyone out there that can tell
> me how to do this,,Thank you
>

Hello Barry:

Most all of the ham amps have two 110 Volt AC windings in the power
transformer. These two separate windings are wired in series like two

batteries in a flashlight. This series connection allows for the 220 Volt AC use.

The two separate windings can also be wired for 110 Volt AC use. They need to be wired in parallel. This is not a terribly hard thing to do. I am sure the operators manual will show how both the 220 and 110 connections are made. Manuals can be bought off the internet, just type in Dentron Clipperton into www.Google.com

Hope this helps

Jay in the Mojave

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #62

June 10, 2007

WHY WE BUILD: Opposable thumbs and soldering irons.
'Scopes, bandwidth, and clean sigs.
Power Supply project: The Soul of A New Machine. Mississippi Oscillations.
My Wabi-Sabi shack.
Metal work.
NEW FEATURE: CLUB TALK -- a visit to the meeting of the New South Wales Homebrew Group.
MAILBAG: Steve, WN0PWK. Dov, AD0V. Seth, W8FG. Dennis, KC0IFQ.

Tired of listening to Santana or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack? Tune in to SolderSmoke!

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the

site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.soldersmoke.com

All the programs are available here.

I hope you enjoy the program. Please send us
feedback.

That's really an ignorant post. If you are one of the guys selling CB amps.
I hope they get you sooner than later.

I see from a recent eBay email, that they are working to make it easier to
catch people running scams or otherwise breaking laws such as those intended
to stop CB Amp sales.

10-4 good buddy.

I've been working on making a decent chart out of MS-Excel and still
trying to figure out the best "AVERAGE" syntax to use for the Y axis.
I've been browsing around the web, stopped by Tu-Cows.com to see if
they had any templates for excel. Any ideas for making a chart to
plot AGC curves? I have several (background) links on my voting
system and wanted to make some bench marks. At work we do it manually
in pencil, for our microwave RSLs.

Any input from you would be appreciated. It's for Amateur Radio.

Regards,

I didn't know FM rigs had an AGC curve. FM does not need any AGC.

Once the input signal is strong enough to fully drive the Limiter, typically 10 uV, the magnitude of the input signal is a don't care.

Hello dear members,

I recently bought a Moto GP68 radio (with the dealer lock jumper removed) and was using the well known AP73 manual to discover its functions. I must have made a mistake at some point because my radio is now locked:

- no more access to squelch mode change;
- no more access to frequency mode;
- SPM doesn't give me access to the Erase Channel option;
- the procedure for accessing or exiting Dealer mode does nothing;
- the reset procedure (the one with 1-3-5-7-9 dials) doesn't work;

I am out of ideas on this one. My guess is that I'm somehow locked out of the normal operation mode.

Has anybody here encountered this problem? I would be very happy to
hear about a solution to this.

Regards,

Bootcat

Hello,

I would like to invite you to a new discussion group on this HF Amplifier.
It was a big hit at Dayton 2007, and the reviews on eham sound very positive.
The first shipment of these amps will be arriving in the US in June and it has FCC Approval.
If you have been exploring the purchase of a Solid State Amplifier or if you currently own one, please join this group.

http://groups.yahoo.com/group/SPE_Expert1K_Amp/

Some FM rigs use FM Rx chips that have a signal strength output, Lke the
Signetics NE-605. These can have a dynamic range of more than 80 dB with
excellent liniarity and temperature stability. In fact some DIY spectrum
analyzers use these in the 'video' IF for the level detector.

Ho humm, so tired of that comment.   I think you need some new
material. Why would I as an Extra Class Licensee have to know that?
It wasn't on my FCC exam. Oh shxt, there I go again, now I sound like
a new codeless clone.

Dave,

I guess I didn't explain myslef. Acually all FM receivers can and may
use the the IF to generat a DC
voltage depending on the strength of the signal coming down the IF.
This voltage can be used to drive
an "S" meter or other measuring device. If you calibrate this voltage
by plotting on a graph for the Y axis
with a sig gen in the into for the X axis you can plot an AGC curve.
Real handy for determing RSLs.
We do it in microwave work all the time.

Regards,
Karl

I'm trying to get a copy of the schematic for a Motorla TPN-1136A
power supply. I think it comes out of a MSR or MSF series base
station, but can't confirm.
PDF, jpg or U.S. mail is fine. I can do a little $ for the trouble.
Just visit my domain for contact.
thanks,
Karl Shoemaker, AK2O

Ok, we have a terminology problem then. AGC (Automatic Gain Control) is found in AM receivers to control the gain of the RF amp stage and one or two IF amplifier stages.

FM receivers almost never use any gain control (some designs that have to work under very high signal strength conditions may use a simple AGC to keep the impedance constant at the IF filter), depending instead on the IF limiter(s) to produce a constant output. They may have an RSS (Relative Signal Strength) output to drive S-meters. It is usually derived from current changes in the limiter/last IF stages as the signal input rises. Any signal that falls within the IF filter passband can make this rise, be it spark/arcing noise from car ignition, broadband noise from computers, or spill over from nearby tranmitters.

In FM voting systems, this RSS may not be the best signal to use since any of these sorts of interference may cause this level to jump up without opening the squelch. The squelch circuit senses the audio noise level at the detector ouput (though some old designs may use the lack of audio noise on the last limiter RSS) and is a much better indicator of signal quality. If you can dig out of the receiver schematic where this noise detector is and use it instead you'll have far fewer false votes to a jammed receiver.

Now, to your original question, Excel and graphing. I'm not sure exactly what you're looking for. Simple instructions on how to produce a graph for print-out? Or something a bit more involved like curve fitting to get a smooth curve instead of straight lines through the data points? Excel ought to have examples of the former in the 'help' tab. For curve smoothing, look for 'statistical analysis' in the help also. My search on google.com for 'Excel "polynomial regression" ' yielded several good sources of more information.

      I have a Cushcraft A14820T 2-meter beam for sale. This is a
dual-polarity
      antenna that has 10 elements vertical, and 10 elements horizontal. The
      antenna is currently assembled in my cellar, but has never been used.
Info
      can be found at
      http://www.cushcraft.com/comm/support/pdf/UHF-VHF%20YAGIS.pdf
      Email kc2rdc [at] localnet.com if interested.

I don't think that PS comes from an MSR or MSF unless Motorola recycled
the part number. I think it is a control station power supply sufficient
for intermittent duty medium power stations. You will probably find a
pair of 3055 type power transistors as the final regulator of this
linear supply.

The prices are by far lower than any other dealers. I cant beleive the pricing! It looks too good to be true also with free delivery - has anyone used them? Are they any good?

The forums look interesting but not much traffic. Apparrently they have just redone the site? Anyone been to the shop?

I have no link to them - I found them as they advertise on another forum and another website www.cobraworxshopz.com and www.ukradiodx.com

Also a regular on the 19 was talking about www.fusionrf.co.uk www.cobraworxshopz.com and also www.ukradiodx.com. Ukradiodx.com is where you can listen to the 19 from London on the internet

Hopefully with these websites that are starting up - it will get the interest back again on CB?

Do you think it will ever get back to what it was? Probably not :(

>>PDF, jpg or U.S. mail is fine. I can do a little $ for the trouble.

Yes, the TPN 1136A is a 36A 13V DC power supply for the Motorola station, MSF5000. There currently is one for sale on Ebay. Can't help you with the schematic at present. Maybe confirmation of the station it is for may help you in your search. A station manual for the MSF5000 may have it. Heck, now that I think about it, I may have a station manual for that model in storage. Unfortunately I do not have time to get to it for a month or so. Good luck. If I see you post again in July, I may be able to help.

Karl, I think you misunderstand me.

My understanding of AGC [my college days were almost 50 years ago] is briefly described as follows.

An AGC [Automatic Gain Control] curve is a plot of the negative feedback to control [reduce] the gain of the rf amplifier and/or first i.f. stage necessary to maintain a constant audio level. Typical AGC dynamic ranges may easily exceed 90 dB of attenuation or more. In a modern receiver the MDS is typically -134 dBm. An average audio output may be +16 dBm [earphone]. With an input variation from -134 dBm [S0] to S9+40 [typically -34 dBm] the AGC dynamic range has to be 100 dB for 'constant audio output'.

In FM radios the constant audio level is typically determined by the saturation level of the discriminator/limiter. Any further increase in the input signal cannot produce more audio/output because the discriminator/limiter have saturated [assuming a TX/RX matched deviation system]. In amateur radio equipment a relatively low level rf signal will fully saturate the limiter circuit [10 to 15 uV]. This will indicate S9++ on a typical amateur receiver. [Note: 10 to 15 uV will produce an average S meter reading of S7 +/- in amateur SSB/AM/CW modes.]

I understand from your description that the measure of i.f. voltage amplitude is simply a measure of the open circuit gain and associated normal non linearities of the rf/i.f string before limiter saturation. Is this correct? Is there a negative feedback system to reduce the gain of the rf stages in your description?

Are you using the term in a manner that I am not familiar with? I am trying to understand exactly what you are saying.

SNIPPED

Lynn, sorry for my direct response to this thread. I posted it before I read
your response.

We are both making the same point. AGC is a negative feedback subsystem in a
receiver to maintain a constant output. I was wondering how the term was/is
being used.

Gee I thought this was a discussion board of rec.radio.amateur[government licensed personal communication equipment free from the profit motive]. equipment and NOT CB stuff.

Am I missing something?

Your post sounds like you may have a financial interest in the products. What's this '19' you keep referring to?

I'm getting a buzz in my audio using high power on my new Yaesu FT-8900R. It
only happens on high power after a warm up period. It happens even on a
dummy load, so it's not SWR related. Any known problems with this rig? Does
Yaesu have a 'problem' web page?

Sounds like the power supply is a bit weak when using high power. Is this a car or home?

Like the other poster said, it could be your power supply or weak
connection. Also make sure your coaxial cable is not inducing something
into the power supply leads. Check those first. If not it could be an
instability in the power control loop. Maybe a weak filter capacitor.
See if the high power is set properly and the current drain is correct.

Hello,

I looking for the Extendend TX mod on HF for the Icom IC7800 #03 EU-version.
I found on
http://www.dw.ham.dmz.ro/icom/ic-7800-general-coverage-transmit-mod.php
something but for which version ?
Can someone provide me such info ?

Met vriendelijke groet,
Kind regards,

Hans Pluijgers

Karl -

A quick examination of the power supply electronic components may reveal the common "723" regulator chip (originally designed by Fairchild Semiconductor in the 1970s as the ua723).
Most of the chip reference sites have the data sheet and applications notes, and the theory and design information you will find there is as true today as it was when the chip was introduced.
For your education, etc. -- these web pages:
http://www.kbt-dc-supplies.com/

http://www.repeater-builder.com/rbtip/mojoindex.html

Adobe Acrobat article
http://www.repeater-builder.com/astron/seits-astron-article.pdf

Several manufacturers have had Astron build supplies for them - for example a Kenwood KPS-12 is based on the Astron RS-12, the Motorola HPN1007A is an RS-10 derivative, and the Motorola HPN9041 is an RS20 variant.

What is the bandwidth of standard narrow band FM as we use it on 2 meters? Is there a rule of thumb based on deviation? (I don't want to get into the heavy math, I just know it's more complex than AM or SSB.)

As an old timer, I remember 2 meter amateur FM started out with 30 KHz channel spacing. Then, it went to 15 KHz. Then some deviants went to 12.5 KHz. New rigs have 5 KHz tuning. Is there an official channel spacing?

There is a diffrence between FM bandwidth and channel spacing, though they can be related.

The original two meter FM gear used in the 60's were converted surplus land mobile radio service equipment. Due to the FCC imposed reduced channel spacing of 30 kHz in the VHF LMR band, the two meter band inherited the same 30 kHz spacing. The actual IF bandwidth of the receivers was 15 to 20 kHz, since the combination of crytal frequency drift over temperature, the poor IF filter quality available then and the signal bandwidth of a 5 kHz deviation transmitter would stay within that passband.

Later improvements in IF filters (ceramic compound filter blocks) and crystal oscillator temp stability allowed using 14 to 16 kHz bandwidth and that became the norm for 5 kHz deviation in the two meter band too.

At UHF, the situation was similar, converted LMR UHF gear was adequate for 25 kHz channel spacing since that was what they used. Same 5 kHz deviation and typically 20 kHz IF bandwidth since temp stability was less than VHF. Again, improved fitlers and xtal osc design allowed narrowing to the same 14 - 16 kHz IF bandwidth.

Now when you say narrow bandwidth, I wonder if you mean sliver bandwidth FM? That was the latest change to hit LMR. VHF channel spacing went to 15 kHz (or 12.5 Khz at the top end) in the VHF LMR band and deviation dropped to 2.5 kHz, plus 12.5 kHz spacing at UHF and 2.5 Khz deviation too. When I worked for Midland years ago, I came up with a dual mode modification for their LMR gear that used a compromise IF bandwidth of 9 kHz (four pole xtal filter in the first IF) and a set of audio switches to go between 5 kHz and 2.5 kHz deviation, programable by channel.

There is no specific requirement in the rules other than we must use
good engineering practice. 97.101 (a). For FM, 6 kHz (3 kHz in each
sideband) is needed. I.E. Don't use more than you need, and if you
do, other hams will quickly let you know about it.

Does anyone know what is exactly inside the "matching network
assembly" part for the R3 vertical antenna? I'm sure it's a couple of
capacitors, but I need to know the values in order to build one for my
R3.

Thanks,
Prentice

Bob-

Although 5.0 KHz peak deviation has been a defacto Ham standard for around 30 years, equipment manufacturers frequently also have a commercial product line. They will often adjust equipment the same for both lines. Recent Ham equipment is being shipped with peak deviation ranging from about 3.5 KHz to 5.0 KHz. That represents a 3 dB range of adjustment, which is just noticeable to the ear.

A more appropriate question might be what should the average deviation be? Many people like to hold the microphone several inches away from their mouth. They may not like the sound of wind-blast resulting from holding the microphone next to their mouth. Unfortunately the radio may be set up for close talking, and might easily have 10 dB lower audio as a result of holding the microphone away from the mouth.

Ham Radio is not Broadcast Radio. To keep background noises low and voice level high, I would vote for close-talking and an average level of around 3 KHz deviation.

Really?

Thats not what the Ebay 850+ positive feedback says - and about the pricing being high - where can I buy the stuff cheaper?

Please let me know as I am about to buy. Cheers

If you are referring to the original Cushcraft R3 with its remote control. There was a motor /capacitor and coil. I did see documentation on the Internet at one point (not from Cushcraft) a few years ago.

Hi All,
alas, I have an FT-ONE Yaesu on the bench to fix (its not mine, thankfully) and I have been stalling for literally YEARS on getting stuck into it. Its a cross between a small telephone exchange and an attempt to do things with micros they were not really up to at the time.......(4 bit micros meant some funny "rubberising on xtals to get it to cover the relevant frequencies with any resolution....) however, be that as it may, I need to fix it.

Searching groups show a common cause of problems is the ALC - ie, winds back PO too much. This one does it, too - but only on 40m. Rest seem reasonable, into a dummy load.

Anyone come up with a fix for this? - cant find any references besides frustrated calls for ideas (me too, I guess) I suspect its a design error, but the circuit with all its micro/pll stuff is mind bogglingly complex - the plug in boards don't help much either as far as in circuit troubleshooting goes.....

Funny - this was Yaesu's "top of the line" radio in its day, a bad idea from birth - wonder how many are still on air.....

Andrew VK3BFA.

Thanks Greg.  I have also found that alcohol is not the greatest for
cleaning boards, although it works good for cleaning flux residue
after soldering.  The problem I have always had with alcohol over a
large area is that is leaves a film on the board that looks messy.

Dick

Here's hoping. This guy's web site's a real money spinner due to ill-informed CBers. The sooner they close him down, the better. Talk about a model for spectrum anarchy....

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #59

May 20, 2007
Kindred spirits on QRP-L.
Fredbox on 2 meter AM.
New videos.
Hewlett, Packard, Garages and Terman.
LV Blake.

SPECIAL REPORT FROM DAYTON: INTERVIEWS WITH G0BPS, G3MFJ, G3RJV,K8IQY and W7ZOI!

MAILBAG: W9HAU, NC0O, WD5DZG on source for low value resistors. Scott Haley on thermal noise and the 'ZOI power meter. The need for SolderSmoke correspondents at other summer radio events.

Tired of listening to the Boston Pops or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack? Tune in to SolderSmoke!

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

All the programs are available here.

I hope you enjoy the program. Please send us

feedback.

I'm planning on putting up a Diamond V2000 (6m,2m,70cm) on a side arm with the apex of an inverted Vee HF dipole hanging underneath. The two rigs these antennas go to, overlap on two bands - 10m and 6m. With the antennas in such close proximity, is there any danger of one rig 'blowing out' the front end of the other?

Can someone provide me the wiring pinout for the Kenwood MC-60 microphone? I want to use it with a Yaesu 757GX tranceiver.

Thanks,
Jim Barnard

My Kenwood TS870 is drawing too much current. At 50W CW output it is drawing 20A. If I go for 100W it just keeps going up and kills the supply at 25A. Specs say that it should take no more than 20A at 100W.

This excess current is when the rig is fed into a dummy 50 load as well when into different antennas when matched to 1:1. The current varies slightly band to band but only by a couple of amps or so. One clue: on 80M I can detune the external tuner antenna cap (to 2:1) in one direction and the rig current can be brought down to 14A with the power out staying at 50W. Under this condition I can then increase the drive back to a current reading of 20A and get 100W. I can reproduce this effect on 40 and 30M but to a lesser extent.

It has 2SC2879 finals. Is this a final problem? I don't have much test equipment or expertise but I suppose I could change the finals if I had to. Actually 50W is quite adequate for me (only 3DB down) and I have been using it this way for quite some time with no noticeable differences in the quality of my operation. Still it bugs me as to what is causing this excess current.

>What are you measuring the current with?

I'm using the power supply meter, but I have checked the supply meter accuracy using 2 other ammeters and they all agree.

>the power supply might be where the problem is.

And I've tried 2 other power supplies, but still the same rig problem.

>Are you getting bad signal reports as in poor quality RF?

All on the air reports have been normal, even after I tell about the problem and ask for a critical report.

Thanks for the suggestions.

Very expensive classic radio, to "tinker with".
I don't let my nephew (learning) touch my classic car --
but then again maybe it has no value to you - and you are have the money to
buy a TS2000.

"w9gb" <spam_protect@arrl.net> wrote:

>Very expensive

When I bought the TS870 in 1995 it was expensive, I think around US$2500. But I doubt it is worth anything like that today.

>classic radio, to "tinker with".

If the TS870 is a classic then I'm more ancient than I thought. My idea of a classic radio has the name Collins, Johnson ect on it. Maybe even my old Heathkit DX-20 qualifies.

>I don't let my nephew (learning) touch my classic car --

I don't blame you not letting your nephew touch your classic car. But don't you touch your classic car?

>but then again maybe it has no value to you

The TS870's only value to me is in fun. And I think I have had as much fun playing around inside it recently as I do using it.

>and you are have the money to buy a TS2000.

Well I could buy a TS2000 but then I would be in the same position I am now someday.

>Service manual

I have the service manual.

>Give Clif a call at Avvid

One thing I've never done is to have someone else fix my ham gear. If I can't fix this I'll modify it. I've already figured a way to feed the TS870 VFO output to feed a set of tube finals (tube stuff I can fix). Some would be appalled at that idea. I call it hamming.

Thanks for your suggestions.

Hello,

I'me Peter ON4HP from Diepenbeek Belgium.
Maybe, you could help me...
I have no audio on my Icom 706, no audio at the original speaker and
also to the external speaker, but sound is ok on the headset socket
on the face of transceiver.
the switch speaker/phone on the back of the display seems to work
(audio up or down on the phoneconnector).
Do you know a way to repair this?
I've noticed that there is a relay which switched between speaker and
phones.
When i put a connector a little bit in the phoneconnector the relay
switches and i have audio...
i've changed the internal phoneconnector but still the same...
Who can help me? please...
Thanks in advance

Peter ON4HP
ON4HP@UBA.BE

I run an IC-751 with a Windom at 30'. The radio works fine after
replacing the old leaking caps. However, when trying to scan it will
not stop when the squelch opens. It just keeps scanning. Any
thoughts?

Thanks,
Doug/KB8M

Geez Doug I have had an old IC751 for years and did'nt even know it had
a memory scan on it so I took close look at mine and yep it shows a
scan button right above the MIKE gain control. It scans on the stuff
in the Memory chnls (1 thru 30) if I recall correctly. I thank you
for bringing that to my attention

I've a question. If these tubes would make your rig "sound loud" but
not actually amplify the power which they won't, why are there so many
people responding like they don't know what they're talking about?
Oh sorry, the new Ham generation, codeless geeks.

Regardless of your "extra," you are a classless ham.

> Oh sorry, the new Ham generation, codeless geeks.

Licensing requirements have changed many times through the years. Recently the big change is to remove the code requirement. So what? It doesn't mean new licensees CAN'T or won't use CW, which is all none of your business.

You should enjoy your privileges and let others with different privileges enjoy theirs. You were not given any ARRL or FCC sniping privileges with that Extra.

Don

Xref: g2news1.google.com rec.radio.amateur.equipment:12066

The "frequency mode" scan functions under control of memory channels 1 & 2, when both of these two memory channel frequencies are within the same band ------ and the selected/activated vfo (VFO A OR VFO B) is also tuned to this same band, repetitively scanning downward betweem the high frequency amd the low frequency memory settings in memory channels 1 & 2..

My 751 continues to scan after the squelch is activated and stops when the squelch is next closed.

Hope this may help.

Charles/W6JNF

Because he isn't selling tubes, he is selling sweep tube linear amplifiers for use with CB radios.

Even someone with an Extra Class License should understand the implications of that.

-Chuck

I meant to comment on your replacement of "old leaking caps", but failed to do so. I have not yet encountered any problem with the caps in my set. Would you please provide a little info in this regard, such as how many and what circuit boards were primarily involved. I don't have the internal power supply installed and am using an external Kenwood PS-350.

Thanks in advance for any info re your cap replacement project.

I need a power supply (PS) for my Icom 2100H; I moved and can't find my
astron 20 amp 13.8 dc volts PS.

Does anyone have one for around $50.00 ? Or $60 with shipping included ?

I'm located in Seattle (actually Burien, next to the Airport)

I will accept private emails for this item!

djay@oz.net

or just post your replies here!!!

Remarkable,

A dual triode with a max plate dissipation of 1.5 watts.

How did this spawn all the remarks from radio police?
Rhetorical question, don't answer.

It is a good question, though. From the advertisement, it is implied that what is being sold is an "enhancement" for your CB radio.

If it is simply a NIB 6GF7 tube, then all of the supposed benefits are meaningless, as a 6GF7 is a dissimilar section twin triode that was made for use as a vertical deflection amplifier in TV sets. A 6GF7 might have been applicable in an old tube model CB, but old tube model CB radios are pretty rare these days.

Perhaps it is a knee jerk reaction to the poster, and the word CB? Doug Adair, or someone purporting to be Doug Adair, seems to have a big interest in buying, selling and using CB linears.

MFJ makes plug-in external coils for the MFJ-259 that converts the
analyzer into a grid dip meter. They attach to the bnc connector.

Yep!!! My MFJ-259B has lots of guts too.
The dipper coils are used to make the Analyzer operate like a grid dip meter.
Extremely useful for tuning traps, tanks, etc.   They are an accessory to the Analyzer; I think the part number for them is MFJ-66.
There are two coils in the set, one for 1.8 MHz to 50 MHz, the other covers 20 MHz to 170 MHz.

Cheers!

I'm sorry I can't be more helpful, but someone pointed me to a German version of the Manual that a ham wrote for it. I have forgotten the URL. :-(

It includes instructions that even a non German reader can understand for making a set of coils that far outperform the MFJ ones. They can be made for a few dollars assuming you have a source for small white PVC pipe, BNC connectors and enameled magnet wire, none of which I can get locally. :-(

Geoff.

After 6 mos off for hip fracture healing, and a small fire,  I have
started to list items again: I will add daily as I can:

See my items at:
http://search.ebay.com/_W0QQfrppZ50QQfsooZ1QQfsopZ1QQrdZ0QQsassZheytubeguy

I also have 30 or so antique radios to be added beginning in the not too
distant future.

Tnx for looking, Heytubeguy

Wow! I learned something today. Even old farts can learn something new.

BTW: my grid dipper is a real grid dipper ... AN/PRM-10. Anybody remember that
old boatanchor?

Does your rig work with a straight key? If not, the problems in the radio,
or it's not really in CW mode.
You would be unlikely to see a voltage at the output since the keying
voltage comes from the radio. The keyer just uses a relay or transistor
switch to short the two lines from the transmitter. Since the keying lines
may have a positive or negative polarity, the keyers with transistor
switching have plus and minus outputs - make sure you use the right one. If
you need to check it out, use the ohmmeter to check for resistance change
and again, it is polarity dependent.
You did mention a voltage change, but don't worry - the keyers I am familiar
with run whatever they get through a +5v regulator so that probably isn't
the problem.

Solved the problem. For some odd reason the power jack on my keyer
has the polarity reversed (pos on outside, neg in center). I had
forgotten it was made that way. Switched polarity and it works fine
now.

Thanks..
Doug

This was discussed at the prize drawing at the end.  First, the want to
build up enough of a reserve so they can still have another hamfest even
if they get two washouts in a row.  After that, they will be
contributing to ham radio related causes.  They plan to post all the
financial info on the web site once the accounting is complete.

=======================
Assuming that these dipper coils are connected to a PL259 plug for
connecting to the MFJ259B 's SO239 socket ,  it should not be too
difficult to homebrew the coils .........I'll have a go at that.

Yeppers!!!   I surely do remember the PRM-10. Almost bought one at a hamfest a
few years ago, but it looked like it had been through just about every battle in
WWII, Vietnam and Desert Storm.

They were good instruments; I used them while I was in the Navy as an ET during
the 60s. I found them to be quite useful while overhauling old comm equipment
while I was aboard the USS Vulcan (AR-5) during that period. Got a tremendous
amount of experience on that ship.

Cheers!!!!

Yes, I guess "kit" is a stretch but I think that's how the K3 will be
marketed: fully assembled or "kit"

It also might not be obvious to some people but often an organization will have to pay rent to use some space for events like a hamfest. There may be other fees-costs, too.

This is not to say that the question could also be motivated by a genuine curiosity about whether anyone inside the club/sponsor might be benefitting in some preferential way that might be hidden from the average person. Sometimes these are acceptable, sometimes not. One example I know from the past, in a couple of clubs, had it that the raffle winners always turned out to be all of the club officers. In another club I was once in, it was interesting to learn that all of the club's radio gear (SSB HF transceiver, and a bunch of other stuff) was "stored" at one member's house and was always used during all of the contests by the contest-freaks in the club. "That's the way we've been doing it for years" and no one dared to openly ask about this but there were private whispers about it. But, its _my_ dues and the dues of the others that is subsidizing the interests of a very minor fraction of the membership. Club members might want to pay attention to how annual finances are discussed at meetings; do they go into depth or gloss over things?

Just a couple of things for people to think about.

The organizers put up the cash.

The organizers assumed the risks.

The organizers paid the insurances.

The organizers signed the contracts.

The organizers did the work.

There is NO REQUIREMENT that NEARfest be charitable.

If there are profits, the American Way is that the people who put up the original cash have the right [RIGHT] to return on investment.

What's your problem?

/s/ DD, W1MCE

Need a little info please.

Have a Yaesu FT-990, no service manual. The light on the meter is dead.
Anyone ever change out one of these bulbs?
Is it a major undertaking or just minor surgery? Have changed a couple of "grain of wheat" bulbs in dual band mobile radios before.
Just thought I would ask before tearing into the thing. If it is a real major operation will send it off, other wise will dig in and do it myself.
Also, if someone has the service manual, perhaps you can pass along the part number for the bulb, assuming it is a bulb and not a back lit meter of some sort.

Sam - K7SAM

The USS Hornet Amateur Radio Station has aquired several Harris RF-287 Remote Control boxes. I
believe these were used by US Navy Ships for remote speaker-handset stations. I don't know what
type of transceivers they were used with. I haven't found any information about them by googling.
I am looking for a schematic. The box is about 4in. high by 6 in. wide by 4 in. deep and contains a
speaker, audio ower amplifier, power supply regulator, two relays, two small audio transformers, a
switch and a volume control. Connection to the transceiver or patch panel is through a 10 pin MS
connector. Does anyone have a schematic they can share before I have to trace it out? Thanks and
73.
Ken Fowler, KO6NO

It is a 12v lamp according to schematic,and you would be much better off
replacing it with a led and resistor...

FT-990 "Technical Supplement":

Exploded View (Front Panel Assembly):
Meter Lamp 14V 150mA, Q1000075. If I interpret the drawing correctly,
the meter lamp goes into fuse holder P2000003.

Pilot Lamp Replacement:
Disconnect all cables, remove top and bottom covers.
Remove 7 screws from the edges of the front panel (2 bottom, 3 top, 1
upper left, 1 upper right).
Loosen 2 remaining screws at the lower edge on each side.
Fold front panel forward and down to access the inside.
Remove 2 screws in the lamp reflector.
Remove reflector to access lamp within.

Hope this helps!

73, Markus HB9BRJ / AE6MG

Markus -

Think that was just the info I was looking for.
Thanks a bunch, very much appreciated.

Sam - K7SAM

LEDs tend to have a very narrow dispersion angle. A friend (service
'mangler' for a pro-sound company) gave me a tip: file-off the lens of the
LED.
If you want to stay with grain-of-wheat bulbs, and can't get the OEM units,
you can find them at well-stocked hobby stores. To make them last longer,
you can use a constant-current source (LM317L, etc) to limit the in-rush
current. You'll lose 1.21V across the '317, which may still be acceptable.
73,
Bryan WA7PRC

Fire up your 6m rigs, I see lots of tropo on low VHF of TV. I am
receiving a channel 3 WEDU Tampa Florida here in NJ just outside of NYC.
   Also seeing interference on NYC's channels 2 and 4. 21:40 zulu May 9.

On a Motorola GM350 4 channel is there a way I can key the radio to
transmit through the microphone socket ? I know pin 6 is the PTT line
is it a case of shorting 6 to 0v ? The microphone has a circuit in
it ! I dont intend to use the fist mic and want a reome way of
putting
the radio into tx.

Hi!

Does someone have an electrical scheme for the headset (EME 12(13)) for
Alinco Dj-139 (or some other types).

Thanks in advance

Matija

I'm driving from Tulsa to Dayton May 16 and will have the following
there. I don't have a reserved spaced so I'll be getting one at the
door.
I'm in a dark blue Chrysler Town & Country mini van with Kansas tag.

HP 8924C like new for $1200.00 or best reasonable offer.
Collins 30S-1, 30L-1, 651S-1. 32V-3 with original T-3 Astatic mike &
spare final.
Spare 4CX1000s
Hallicafters S-40B very clean..

Heathkit SA-2060 very nice
HP 8590A, a bit deaf..
Webster Bandspanners.
Watkins Johnson 8718 vlf HF Rx
Watkins Johnson DMS-105-2 vlf demod, vlf Rx with Nixies
Mackay 3021A vlf HF rx.
Martin HD-28 dreadnaught acoustic guitar

My cell phone is 918 852 4996

hi,

I'm trying to assemble a wireless network between two computers. The maximum range is 300m. All the network will do is transfer data from a GPS plus an additional 34 bits of data from one computer to another. Can anyone recommend a cheap, easy to use product? Preferably something that connects to the USB or serial port.

thanks,
Jon.

Pcmcia WiFi cards with external directional antennas, or USB WiFi dongles if
line of site, or better yet, usb/ethernet WiFi game adapters with highly
directional external antennas...  Easily do-able for under $100.

Thanks for the quick reply. Are there any specific products you'd
recommend? I'd rather not utilize directional antennas as one computer
will be mobile and although it too will have an GPS having a
directional antenna means I'll have to move it in the right direction.
Is RF a better solution?

Jon.

You specified between computers, So, surplus wifi adapters with the drivers
```

are found cheaply most anywhere...
What could be much easier, as Windows and most all Linux OS have all the support built in..

WiFi is RF, it's just how the data is transfered.

Use a high gain vertical whip (7-14") high, 3-9 db gain on the mobile.
The antennas can be any type of high gain depending on your particular
requirements.... A good setup would be a matched pair of pcmcia card to
high-gain vertical for the mobile, to either the same on the fixed, or on the
fixed a good WiFi router with high-gain antenna, all of the same manufacturer.

I use the Buffalo WLI-CB-G54HP card with external 7db mag mount vertical,
talking to a Buffalo WHR-HP-G54 WiFi router with a 7db external vertical,
and have gotten over a mile line-of-site data. Total cost was just under $100
for all a couple of months ago.. I wouldn't be surprised if it is less now..

What is the latest thinking regarding cleaning populated circuit
boards. Such as the motherboard in a computer. Many of the things we
used in past years are no longer available for environmental and
health reasons. I'm thinking some liquid dish washing detergent in

warm water applied with a paint brush, followed by thorough drying before re-assembly. Any better ideas?

I still use isopropyl alcohol .. without additives.
Many drug stores.

Have you look at WASSCO (based in California) -- as your cleaning source?
Excellent store/retailer/distributor for soldering/electronic assembly,
production and rework supplies.
http://www.wassco.com/

Elecraft uses and recommends for their kit builders, as well.

HRO in Denver area.

Techs that I do know in area -- have a backlog of repair work for over 8

weeks
(go figure -- finally people are emptying their closets of broken radios to
sell -- now that new NC amateurs want cheap equipment. OF course, so are
just emptying the closet onto eBay,
"Worked last time I used it .. 15 years ago"

This would probably be best for a really dirty board. Some use dishwashers. It
even dries them. For sensitive circuits, water can seep into components
and can take a long time to fully dry. Baking is sometimes necessary
if you need it right away. For small areas I use pure alcohol, but the alcohol
attracts water vapor and creates water droplets. I make use of the heated
blower tip on my Weller station to blow around components and down the board.
Alcohol is not a good wash for some things like orange juice
or Coke.

Its long past time for me to replace the Lithium CR 1/3N memory battery
in my old FT-757. I am considering just removing the old one and tacking
in a pair of wires which will run to a nearby Lithium AA cell in a holder.
Can anyone think of a reason why I wouldn't want to do this, assuming
there's a reasonable place to mount the holder?

Rule number 1. If it ain't broke, don't fix it.
Is the AA cell the same volts as the existing battery?
Does the risk of the modification outweigh the rewards?
What's gonna happen when you install the cell backwards?
Before you answer and tell us how smart/careful you are
...nobody ever said, "hey, I think I'll
put this in backwards..."
As I recall, there ain't much room in there.
Rule number 2...see rule number 1.
mike

Guess you don't have invisible fence / dog owners in your area --
that system uses 1/3 N batteries as well.

The radio/battery is 21 years old. You figure it out.... <<grin>>

> Is the AA cell the same volts as the existing battery?

Yes.

> Does the risk of the modification outweigh the rewards?

No risk. I've spent 35+ years working on far more sophisticated gear than this....

> What's gonna happen when you install the cell backwards?

Isn't going to happen.

Thanks for the info. I see Radio Shack carries this battery, too. Problem is, Yaesu's version comes with spot-welded tabs. Now that I'm retired, I'm lazy and don't want to go to the extra effort in removing the board the battery is on so I can do a proper job of unsoldering it... I intend to snip the battery tabs from top side and just wire a new (wired) substitute battery to it.   Also, I don't like soldering to the stainless steel type cases on such batterys as the one suggested above, which is why I'm considering the option I posted here.

Thank you again, though.

Ed

All,

Our Signal/One MILSPEC 1030 transceiver is now for sale on eBay:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=230123960885 .

This is the 150 Watt version. I recently made several QSOs with it, on all the bands that were open at the time, so we believe it to be completely functional and know of no performance problems. It has only minor scratches on the sides and top, and comes with the manual, AC power cord, and 12 VDC power cord.

Sales notices are supposed to be upbeat, but it's difficult being
upbeat when you are selling such a wonderful rig!

73,

Ed Callaway, N4II
Motorola ARC, W4MOT

I just heard that a K3 is about to hit the market. I put together the
K2 last year. IF it lives up to expectation, it could find a place in
many many shacks. A true rival for top-end Yae-Ken_Com? Cost is under
$2000 I think...it comes as a kit or pre-assembled.

What do you think?

Oh Ed......my...my...my.....

Only $2000 for an OLD obsolete HF rig. Anyone can do better than that with a phone call to a dealer on a NEW rig.
Your ad says "No reserve" but it STARTS at $2000........uh-huh....That's called a "Reserve" Bunkie.
You say it works perfectly, but NO GUARANTEE once it leaves your hands.....yeah right....
"Such a wonderful rig"...oh please....give us SOME credit......were not THAT stupid.

Typical HAM radio operator....Wants to STEAL it when HE buys it..then wants "Top Dollar" for it when he sells it.....

Have you checked the current price of an OLD, obsolete 1956 Mercedes Gull Wing these days? Just because it is old, doesn't mean it isn't worth a great deal of money. Like a new ham radio, you can buy a brand new 2007 Mercedes today for a lot less than the 1956 would bring.

The "gullwings" were a classic....the Signal/Ones are not. Read the CURRENT

reviews...
They are a short run trouble prone pain in the ass. Support was poor when
they were in business...non-existent now.
Would you rather have a Heathkit SB-104 instead?

No, I would rather have a Signal One. The reviews you referenced
don't support your view at all. In the first one, the guy was trying
to get an Icom 781 converted to a Signal One. He got hosed. The
radio up for auction has nothing to do with that conversion other than
it has the name. In the second one, the guy loves them. In my
opinion, it is a classic radio in the truest sense of the word.

Hi from Ken in the UK,
It looks really great and I am sure it will be a winner for "ELECRAFT".
Just one thing though, it comes fully assembled or you can buy it in modular form, no kits has such though............cheers, Ken, G4KIR.

I don't even get how you can turn an Icom into a Signal One.

But obviously for collecting purposes, the Signal One is a standout.
I can't imagine that many being made, so that makes it collectible.
It was a great leap forward when it came out almost forty years ago.
Most rigs were still tube based, and the Signal One comes along all
solid state except for the PA, and featuring things that would take
```

some years for the competition to put into equipment. It was also
an American company, when the balance was shifting away from those
and to Japanese radio manufacturers.

It's always interesting to do some math when looking at old things.
The Signal One came out in 1969, which is 38 years ago. Go back
38 years before 1969, and that would be 1931. Very few people were
using rigs from 1931 in 1969 (though oddly some of the early Signal
One ads did have a comparison along those lines, and at least one
ad used 1920 style typeface in the headlines), and some might consider
the 1931 rigs collector's items in 1969 (though, there seemed far
less interest in collecting old radios then than now).

I remember very clearly the night a new Signal One was brought to our
radio club at General Dynamics for a demo. It was simply amazing. I
can't imagine any other ham radio ever manufactured that created such
lust for ownership. Of course the price made it only a dream for most
of us,

This is an extremely high quality 150 watt HF SSB, CW and AM Transceiver for Marine or Ham use. This is the ADSP1 model. It tunes continusely from 2MHz through 30MHz on both transmit and receive.

Click on this link to see all of the current model specifications of the ADSP2 model which are just about identical the the model I am selling:

http://www.sgcworld.com/Publications/Brochures/PowerTalk.pdf

Click on these links for picture of the SG-2000 PowerTalk I have for sale:

http://imagehost.epier.com/44487/sg-2000-1.jpg

http://imagehost.epier.com/44487/sg-2000-2.jpg http://imagehost.epier.com/44487/sg-2000-3.jpg

The radio is in Excellent condition both cosmetically and electronically. It comes with the SGC mic and the manuals.

I have two of these. I am selling one. The other one is my primary HF rig.

The price is $950.00. Plus insurance actual UPS shipping costs from my zip code to yours. My zip code is 80439. Yes, I WILL SHIP INTERNATIONALLY.

For payment I can accept company or personal checks, a cashier's check or a post office or Wal-Mart money order.

If you have any questions, pleas contact me at iamw7gsa@gmail.com or call me at 303-674-0510, I am located in Denver.

Thanks for looking,

Bill

I'm looking for a Mobile/Base FM rig that will cover 6M, 2M and 440 MHz. I see the Yaesu FT-8900R fits the bill, but are there any other rigs out there?

BTW, how common is 6M FM anyway? Could I expect some interesting DX in FM mode when 6M opens up?

Rigs like the Icom IC-706 and IC-7000 come to mind. These give you
those bands as well as HF. The advantage to radios like this is that
you can operate SSB on 6-meters. I think you would be much better of
with SSB than FM if you are interested in DX.

FM is not allowed on 6m in many places. If you are looking for that rare
east-west DX outside of the U.S. you find that although your signal
reaches there, no one can reply.

Geoff.

Icom PCR-1000 Communications Receiver
Computer Controlled
Receives 100 KHz. to 1300 MHz.
Does 9600 baud packet.
There's even a program to connect to your
sound card to do trunk tracking.

Comes with a Palm PDA
to run it portable

Or if you'd rather use a full PC

And there are other programs with more screens
Scanning capability
Spectrum Analyzer-type Displays
Programs that run on a PDA, DOS
Windows...

This is a most excellent receiver with endless
possibilities using your computer.

Serial number 2046
It's reported that serial numbers below
3500 had frequency modification abilities
that the FCC didn't like. But I wouldn't
know anything about that.

SPECIFICATIONS
�Frequency coverage (MHz)
U.S.A. : 0.010000�823.999999*
849.000001�868.999999
894.000001�1300.000000
Europe : 0.010000�1300.000000*
*Specifications guaranteed 0.5�1300 MHz only.
�Receive system : Triple superheterodyne
�Mode : WFM, FM, AM, SSB, CW
� Frequency stability : �3 ppm at 1300 MHz
(0�C to +50�C; 32�F to +122�F)
� Frequency resolution :1 Hz (minimum)
� Power supply requirement :13.8 V DC �15 % for receiver unit;
or, supplied AC adapter
(negative ground)
� Current drain (at 13.8 V DC)
Power ON (PC power OFF) : 0.1 A
Max. audio : 0.7 A
Standby (squelched) : 0.6 A

� Usable temp. range : 0�C to +50�C; +32�F to +122�F
� Intermediate frequencies
1st : 266.7 MHz
2nd : 10.7 MHz

You are correct. The FT8900 would fit that bill. A number of years ago, Standard (amateur) was bought out by Vertex yaesu. One of the absoluetely BEST rigs that has ever been manufactured and designed for ham use was the Standard C5900. I own 4 of them. It covered 6m, 2m and 70cm FM. They are not made anymore of course, however, the FT8900 looks very close in appearance to the C5900. From what I have heard though, the FT8900 does not have the receiver performance of the C5900.

My recommendation, if you can find one for sale (they show up on Ebay from time to time), is to get a C5900 that is in good condition.

I need to cut a square hole (1" x 1.25") in a standard plastic electrical box cover ... in this case, its the type with one hole for a TV jack. The new square hole will be to mount a chassis jack for Anderson Power Pole connections. (Powerwerx HS-4).

Can anyone advise of the best method and tool to do this? I am concerned about cracking the plastic if I don't do it right.

Melt the hole using a;
1) wood burning iron with flat blade
2) nichrome wire with power supply

Then using a fine file, trim to fit..

Try a hand "nibbler." They used to sell them at RS and other hand tool
outlets. I'll send you mine if you promise to send it back with a few
powerpoles.

Thanks, Tom. I'd take you up, but I already have a "nibler" tool...
used primarily for thin steel and aluminum chassis work. I am pretty sure
it would be risky to use on plastic and possibly crack it.

  Now that does sound like it would do the job.... just don't have any
nichrome wire in this little town I'm in.   Maybe I'll come up with an
alternative similar to this for this project.   Tnx.

It depends on the plastic.  I used a nibbler on a Radio Shack plastic
box, and it was fine.  It likely will crack hard plastic, but a softer
one will be fine.
```

You don't need to use a hot iron, you can drill plastic.

"Dremel tools" and the like are good, using the cutoff wheels. The problem is that the mechanical arrangement limits the usefulness. Though, they now have attachments that puts the cutting wheel at 90 from the shaft and that looks pretty good for this kind of work.

Plastic isn't really so different from metal. People used to drill a bunch of small holes close together around the perimeter of the area they wanted out, and then it was relatively easy to break down the space between them. Then use a file to smooth it out.

Of course, that trick was used if you didn't have a hole punch. I suspect those hole punches would work on plastic too, if you were lucky enough to have one of the right size.

  Michael VE2BVW

Oh, the non-believers....
Well, anyone that knows anything about the Milspec 1030 knows that the cx7 just isn't the same rig, and neither is the 1030ci.

The 1030 was a true mil-spec, hardened and wonderful radio. It operated without fail over considerable range of conditions, and the remaining examples probably do so even today. Built like a battleship inside, with individual milled aluminum compartments for each subsection, it didn't suffer from many of the maladies of later integrated rigs. For the uninitiated, the 1030ci was an attempt to cash in on the superior function and longevity of the original 1030 by taking a commercial 781 and "hardening" it. I am not aware of many individuals that actually loved the result like those that owned the original 1030. I owned one of the original 1030 radios with the high power option and multi-color led display and loved it, though succumed to it's popularity on the collector market and sold it around 5 years ago to a fellow on the east coast. To this day, I wish I hadn't, though it is hard to fault the icom 746pro and 756ProII I now have that were paid for by the proceeds from the sale of the 1030... If I thought I had a chance of winning the current auction with what's in my radio fund, I'd be in the bidding right now, just to have another one!

If you're trying to make waves because of a few bad seeming comments about radios that aren't even the model for sale, then just pleae go away. If you actually truly have experience with the original 1030, then come on, and provide just what you think was wrong with the one you had....

Thanks

Hmmm.... just had a thought... since I am only working with the inexpensive plastic covers for electrical boxes, I'll just use an extra outlet cover I have on had for testing. I have both a nibler tool, and a Greelee chassis punch. Could use the chassis hole punch to just create a large hole and file out the corners for square, I suppose. Will try later today.

Mark out the required hole and then drill a series of 1/4 inch holes
 inside your marking. Use a needle file to break out the waste and a
small flat file get the hole to size. Ten minute job in plastic.

Charlie.

Anybody happen to have the details of the dipper coils for the MFJ-259B Antenna Analyzer? Mine have become lost in a garage/workshop cleanout that went awry.

Need number of turns, coil diameter, coil length if possible. Think I can remember the rest of the details well enough to rebuild them.

Thanks for your help

hi ed,

Home Depot has Leviton Nylon blank covers
in white, medium sized about 88 cents a piece.

Very flexible and you can tool it, the regular covers will crack
once the adapter is mated to is and coax is tugged.

73 james

Thanks for that tip. Unfortunately, I have to drive 70 miles to get to a Home Depot.... I'll make a list and pick some up when I do get there. Meanwhile, will be very careful with the brittle ones I will be using currently.

Just got back from NEAR-Fest in Deerfield, NH, and while I have to say it ain't no Hosstraders (yet), still it was a very welcome event and I enjoyed it, and it has the potential to grow in the full Hosstraders tradition.

Speaking of the "Hosstraders tradition", I was just wondering if anyone knows where the profits from this event are going.

Hosstraders was always held to benefit the Shriners Burn Center (or the Shriners organization in general, I don't recall which), and from all reports resulted in a large check to that organization twice a year. I'm sure they will miss it.

Anyone know which charity (if any) will benefit from NEAR-Fest?

Pre-drill round holes in the corners of your square hole. That way, any
cracking will stop at the corners.

> Pre-drill round holes in the corners of your square hole. That way,
> any cracking will stop at the corners.
>

That's what I ended up doing to the hard, brittle, faceplate I was using. Drilled the holes veeeerrrry slowly, with no resulting problems. Then I used my fine toothed coping saw to cut out the square hole for the Anderson Powerpole chassis mount jacks. Also put a BNC antenna jack on the plate. The whole thing will be my HF radio power and antenna connection in my motorhome. It is now done, looks nice, and should be very functional.

My thanks to all who replied on this subject.

Ed K7AAT

Hi,

I have a Daiwa DK-210 CW keyer. I haven't used it in almost a year.
Today I went to turn it on, and it wouldn't work. This was running
off 13.8vDC (there is a connector on back for 13.8vdc input). I
opened it and found it can also be run off 9v battery. I connected a
9v battery and it appeared to work, until I plugged it into my radio.
My bencher paddle works with it, but it doesn't key the radio. I
checked the two keyer output leads on the back of it and found no
voltage coming out of them. I don't know what went wrong or what to
do now.

Doug

What coils?

My MFJ-259B has all the guts inside!!!

That, and most of the repeaters, especially on 440, are all
closed/private around here and therefore useless anyway.  Of course,
none of them are ever used expect for about 4 of the systems, and
therefore just tie up empty bandwidth so people can feel special about
```

themselves..

What's up with Santiago pk? Is there a secret society you have to
join first to put a repeater on that mountain? It's the best site in
so cal for north/south comms, yet 95% of the things up there are
"private"... Talk about pretentious...

I was, well technically am still on the county ECS team, but I became
inactive cause no one really did too much. They still do their thing
which is good, but I just didn't have time. Of course being a local
RACES (does that still exist?) member does u no good if a high-level
machine is taken over and you want to use it for 1 minute...

Hello!
I have downloaded the PI driver kits from both the FTP repository at
UCSD, and of course from the Packet driver kit that Russ Nelson
created.

I also have the KA9Q software, both from his site, and from the FTP
place.

Problem-- When starting the NOS program with its default autoexec.net
file, it complains that the PI driver has an unsupported "type 9" set.
This is with the PI driver straight from the FTP site, not with the
binary from the Packet driver kit.

Can someone supply or point to a location, a known working binary for

the PI driver? (That the most recent KA9Q application won't complain
about.) And while I am at it, also a location for the schematic for
the board that the individual in Ottawa CA built.

I confess that I am not "frocked" that is I do not have my license to
make use of the transmitter functions, I am planning on studying how
the device decodes packets. I do hope to obtain that license RSN.

Hello, I have two sections of Andrew 3/4 inch hardline for sale. One
piece is around 110' and the other is around 220'
Both pieces have N connectors on each end. The price is a dollar a
foot or $250 for all. I am in central Iowa and this is pickup only. If
you have any questions please email me. Remove NOSPAM from my address.
Thanks for looking.

Hi Greg,
Just to satisfy my curiosity, what is this power supply for? Mouser &
DigiKey have pretty good reputations. My company orders a lot from
both (for prototypes). I prefer to use their online catalogs, because
they show available stock -- you can't do that with a paper catalog.
73,
Bryan WA7PRC

We are in the process of down-sizing the house so I am selling some of my HF rigs.

I am selling the following as one package.
""A Ten-Tec Jupiter model 538 - The matching 705 Ten-Tec desk mic - The Ten-Tec model 310 external cooling fan which is installed - A KLM model 09 external speaker - and The original Ten-Tec manual (NOT A COPY)""

The Jupiter is in perfect operating condition. There are a couple small scratches on each side. The front and the top are perfect. There is a small piece of velcro on the top at the rear or the case which can be used for holding something in place. I am not sure what it was used for, but I never removed it. I am the second owner of this rig

. For more information on the Jupiter model, please click on this link. http://radio.tentec.com/Amateur/Transceivers/TT538

I will double box and ship the Jupiter, and insure it for full value. The cost of shipping & insurance will be the actual UPS shipping charges from my zip code to yours. My zip code is 80439.

The Price is $975 plus shipping.

For payment I can accept: Post office and bank money orders. Cashier's checks. Or, Cash (Please send in a registered letter) With these forms of payment I can ship the radio immediately.

I can also accept personal and company checks. These will have to clear my bank which should take about 14 days.

I can accept PayPal ONLY from International buyers with a 3.5% added fee, which is what PayPal charges me.

If you have any questions, please email me at: iamw7gsa@gmail.com or give me a call at 303-674-0510, I am in Colorado (Mountain daylight time).

Bill W7GSA

Hi All,

This may sound like a very silly question, but what is the "true" frequency of, lets say, a Kenwood TS-530S? What I mean is, when it is said that a particular CW calling frequency is exactly "7.040MHz", then should I set the TS-530S' frequency display to 7.040MHz (in receive mode), or to 7.0392MHz (for a display of 7.040MHz during transmit) to be spot-on a designated Calling Frequency? I obviously would like to make 100% sure that I'm exactly on frequency, and not off by 800Hz, when monitoring for any CQs!

Thanks for any clarification,

-Bill

Hi Bill. I will be interested to hear the replies to your question since I have a similar problem with the TS-570DG. When I work CW it seems that stations (as in your example) that are supposed to be on 7.040 MHZ always sound better to me on 7.040.10 MHZ. I seem to be able to work them fine but I always wonder if I should move back to 7.040 for transmit.

Regards,

Pat

Bill is referring to the fact that older Kenwoods display at one frequency
while listening and the offset frequency when transmitting (the offset being
equal to the sidetone of 800hz). I used to operate a Kenwood TS-130SE when
I was new and it took me awhile to figure out what was going on. In this
case, one should set the monitoring frequency to read as transmit minus 800
Herz or 7.0392 in the example above.

On the other hand, Pat, your radio is one of the newer ones that displays
the transmit frequency at all times (i.e both receiving and transmitting)

when in CW mode. Therefore on your radio, the issue could be one of several things: the default pitch used doesn't appeal to you, the radio is out of adjustment, or something else entirely.

Dee, N8UZE

Hi Bill,

It sounds silly, but it isn't.

I don't know the answer with high confidence, but maybe I can help you to get it.

I "believe" that when you tune in to a station with 800 Hz beat, you will transmit on exactly the same frequency as the station that you are listening to. Make sure the RIT is in the middle or off.

You can check it yourself.
Do you have a separate frequency counter (or other receiver)? If so, try to tune to a source with a known frequency (with the TS530S, for example a broadcast station or). Now you can compare the actual frequency with the reading on the TS530S and you know the difference in reading and actual transmitting frequency of other station.

Now the transmitting case
Press the key (check frequency in use or use dummy load) and read the frequency from the counter, or tune with the other receiver to find out the difference in the transmitting frequency of the other station and your frequency.

I hope this will help you a bit.

I had several problems with adjusting old equipment to make sure that SSB receive and transmit (carrier) frequencies are the same.

Best Regards,

Wim

Thanks for the info Wim. The TS-530S's actually show you only the RX frequency on the digital display dial while you tune around or sit on a frequency waiting for a CQ, and then -- but only when you transmit -- they shift the dial display (and I assume the TX frequency too) 800Hz higher. Frankly, I had thought most other radios did *exactly* the opposite (I.E.: Their BFO's shifted the RX frequency by 800Hz or so, while their TX frequencies where as displayed on the dial -- but I must be incorrect about that!). But I'm still hoping to understand if it is correct to set a Kenwood to "7.040MHz" on the digital display when listening to the 7.040 MHz Calling Frequency (but it then shifts 800Hz higher on TX...), or set it to 7.0392MHz (for a display of 7.040MHz during transmit with its 800Hz TX offset)? With all the Kenwood rig's out there, you'd think that someone would have the answer -- but maybe no-one has really thought about this? (Hard to believe!!).

-Bill

Did you read my answer??? You have an older Kenwood radio. It displays the transmit frequency only when you transmit. It displays the receive frequency the rest of the time. So set your receive at 7.0392 in receive mode. When you transmit it will then be transmitting at 7.040 as shown by the readout.

NEW radios (including new Kenwoods) display the transmit freq. at all times whether receiving or transmitting.

Dee, N8UZE

   Cool Dee -- thanks for clarifying that!  It was confusing the death
out of me (I've been on the wrong darn frequency all this time too!).

     I didn't see your original post on my Google newsreader under
'sci.electronics.design' because, for whatever weird Google reason,
your response didn't cross-post).

Thanks again!

-Bill

Hi Bill,

You can think of the displayed receive signal as that of a signal that is *zero-beat*. In CW mode, the pitch increases as you tune up-frequency from the zero-beat frequency. 800Hz is the defacto "standard" for Morse, which is the difference in your rig's carrier oscillator frequencies for receive and transmit. While in a QSO, if you find a different pitch more acceptable, use your RIT (and IF Shift if necessary and so-equipped). RIT keeps QSOs from walking up/down the band. hi!
As noted above, the carrier oscillator frequencies should be different between receive and transmit, but in *only* CW mode. In all other modes (LSB, USB, AM, FM), they should be the same between rx & tx.

Vy 73,
Bryan WA7PRC

PS: Dee's response wasn't crossposted to sci.electronics.design.

The manual for the IC-P7A says that it covers 495 KHz to 821 MHz, in
both AM and FM modes, but doesn't list any sensitivity specs and isn't

not real clear on how one would tune a frequency from 225-400MHz in
AM.

Does anyone know for sure whether this radio will receive in the (US)
UHF aviation band?

Thanks,
Heath

Another consideration, particularly for VHF operators, is what happens
when you switch from SSB to CW. For example, the TS2000 says that it
always displays the carrier frequency regardless of mode. If you are on
SSB and need to switch to CW becaue you have a weak signal look at what
happens. If the displayed frequency is the carrier and does not change
when you change mode you are now transmitting zero beat with the
receiving station and he won't hear you. You actually have to tune off
a bit (by the sidetone amount) so the receiving station can hear you.
The TS2000 actually has a menu choice to allow the frequency to
automatically make this correction if you wish.
John

The circuit as designed is subject to significant drift.

Has anyone found a mod or knows of a link to a mod? I prefer NOT to get into matched 6BA6s.

I am a retired EE and before I jump into the circuit I was wondering if someone jumped in ahead of me.

I have posted a similar request to boatanchors.

We are down-sizing the house so I am selling some of my HF rigs.

I have two of these and I am keep one as my primary HF rig, and am selling the other.

It is an SGC model SG-2000 ADSP PowerTalk HF 150 watt Transceiver. It is operates SSB - CW & AM.

This unit covers 2Mhz to 30Mhz on transmit and .5Mhz to 30Mhz on receive. This is continous transmit and receive coverage. It is ideal for MARS work.

The power range is selectable from 50 watts on low power to 150 watts on high power.

The ADSP stands for Adaptive Digital Signal Processing. You can read more about this and the SG-2000 on the SGC website: http://sgcworld.com

This unit is certified for Marine use as well as ham use.

It appears to be in normal working condition. I used it this afternoon on 40 meters. It comes with the SGC mic, the SG-2000 book (240 page book), the ADSP PowerTalk book and the SG-2000 PowerTalk quick start card.

These radios are built like a tank. They are very sophisticated and will equal if not out preform any of the Japanese Ham radio units.

These are used primarily for Marine, Government, Commercial and Military communications.

If you have any questions, please contact me.

I will ship this radio Internationally.

Shipping will be actual cost from my location to yours. My zip code is 80439.

If you have any questions, please email or call me. I am located in
Denver, Mountain Daylight Time zone. My email address is:
iamw7gsa@gmail.com

The price for everything is $975.00 plus shipping and insurance.

As with all electronic equipment, this item is sold as is but is
quaranteed not to be DOA.

Click here to see a photo of the rig: http://imagehost.epier.com/44487/
sg-2000-1.jpg

Thanks, Bill

After a 20 year hiatus from activity, I'm getting the shack going again. I dusted off the old Icom 22S and discovered no one could hear me because the rig doesn't have sub-audible tones. Even the old simplex watering holes are using tone squelch.

Is D-STAR going to be the next 'tone squelch'? Should I get a D-STAR rig to stay ahead of obsolescence, or would it be a waste of money?

--

I need to set the tuning on my Sony car stereo from Japanese to US tuning; service manual?

Hi there...

I was wondering if someone has any idea if ANY of the Sony "WX" series of double-din car stereos (japanese or usa models) can be "hacked" so that their tuners can be changed from japanese fm tuning to us/uk or world band tuning and vice-versa???

I recently purchased a Sony WX-C88REC double-din cd/md recorder from eBay. This is a japanese market deck and is factory set for japanese fm tuning. However, the design and physical layout of this deck is very similar to other US models (such as the WX-4500X and the WX-C5000, as well as the WX-C55 which looks nearly identical). I'm nearly convinced that there MUST be some way to hack the japanese models so that their tuners can be "switched" to us or world tuning. I find it difficult to believe that Sony would design two distinct different tuner hardware modules for japanese and american versions. Problem is, I have no clue HOW to "hack" this feature. I don't have a service manual for ANY "WX" series stereos, but I'm thinking that it may possibly be an option in a service manual for ANY of the "WX" decks. Again, I find it difficult to believe that this isn't "set-able" some sort of way.

Does anyone out there have an idea? Does anyone out there have ANY service manual for ANY "WX" series Sony stereo? Or, for that matter, does anyone have a service manual for ANY Sony car stereo that addresses in ANY way setting the tuner for different bands?

I realize there are adapters available to transpose the FM frequencies. I've used them before, always with poor results (stations usually overlap and are weak). I mainly record off the radio with my MDX-C800REC's in my other cars, but always thought it would be cool to be able to dub cd's quickly in-dash digitally without having to mess with a cd changer. But, radio recording is my primary concern...and the adapters don't provide the quality I want for recording.

PLEASE help ANYBODY if you can steer me in the right direction or help in ANY way. If anyone has ANY Sony service manuals for ANY stereo, please let me know...perhaps if setting the tuner IS an option, maybe it is a standard procedure to set ANY Sony stereo's tuning in a similar fashion.

Thank you VERY much!
Jeff

The CTCSS encode is a VERY EASY fix - either an internal (SS-64) OR external (TE-32) encoder board.

Communication Specialists

Ken Fowler wrote:
> Would you like to add Computer Control to your Harris Radio? Please visit my website,
> http://www.ko6no.com, for information about an RS232 Remote Adapter for your RF350.

Ken, this is a great idea!

From the manual on your web site, it appears that the audio channels are brought out to the DB25 connector and that the baud rate could be jumpered for 9600 thus making your board compatible with the Harris RF-352 (C-11329/URC) Remote Control Unit. (At least in RS-232 mode, obviously two/four wire or RS-422 would not be supported.)

Is that correct? Is your board compatible with the Remote Control Unit (with those restrictions) or is it intended for use strictly as part of a software solution?

Either way, this is still a great idea and it must have been a significant engineering effort. Very commendable -- thank you!

Coax relay, SPDT, SO-239 contacts, auxiliary contacts, 115 vac coil, in reasonable condition.

I am re-assembling a 1960s class Novice CW and early General station and need this relay in reasonably usable condition.

My schedule does not allow me the luxury of 'lurk & jump' on eBay. So, I'm making this direct request.

Direct email to above address.

Thank You Hank.

I don't know. Maybe someone in the MARS community has a Remote Control Unit to test it. If the C-11329 can get by with RS232, it should work. It looked to me like Harris used the 300 Baud Audio Modem to connect various units like tuners and amplifiers. I used four of the RS422 pins for RS232 Handshaking and there are no provisions for the Telephone Modem. I also left out the connections for AUX TXD and AUX RXD because they don't go anywhere. We found that some of the commands did not work when the jumpers were in the non-ADAPT baud settings. The radio would return its status and would change frequency but there was no control of Mode or AGC. There are also differences in Command vs Response between the V601C and V604M EPROMs. Our intended use is as a

CAT opertion.

Thank you for your comments.

Ken Fowler

================================
The likely reason is that the FCC considers the device a CB power
amplifier . Lately this federal agency has stepped up its combat against
  the sale of these illegal amplifiers.

Some time ago  a US road side truckers-centre selling  illegal devices
was heavily fined.

Frank     GM0CSZ / KN6WH

**************

Considering his retail outlet, Ebay, has blocked every attempt to sell
the product, His sales has probably been rather low. Thus not
profitable. Also the fact that the amp is rather low powered for most
"competition" CBers and with the plethera of older 100+ plus ham rigs
out on the market, there is not a large market for his amp. Who needs
an five watt radio, and a 100 watt amp to drive a big competion amp
when you can get a Kenwood TS440 or similar and use it.

james

I just listed a nice, clean, working Wavetek Sweep Generator
on e-Bay. 1 - 1,000 MHz coverage.
Got an HP 8350 so this one is surplus.

Take a look:

Looks unused, in original box. With conversion data (simple),
will do 100 Watts out with 10 mW in at 902 MHz.
Nice amp for 902 weak signal work.

$75 plus UPS from 02421.

Thanks, Dick, W1KSZ

I'm looking for these Ten-Tec items for my 546 Omni-C:

#217 500 Hz CW filter
#218 1.8 KHz SSB filter
#280 power supply with DC power cable
#243 remote VFO

I also need pages 3-3 and 3-4 from the owner's manual.
Mine is missing those two pages. A good clear scan is
fine, in any "normal" IBM PC format (PDF, JPG, etc).

Thanks and 73,
Dean K5DH

I think solar storms would prove to be a far greater danger to both
satellite invigilation and communications. Just one major X class
solar mass ejection pointed right at us and it's going to get mighty
quiet down here.  The GPS signals have been interrupted a couple of
times and we weren't even in  a direct path.

I perused the datasheets of both the BYM36E and 1N5408. Of the
specifications that could matter (that differed):

Reverse Current:
1N5408 = 5uA @ 25�C Ta, 500uA @ 100�C Ta
BYM36E = 5uA @ 25�C Tj, 100uA @ 150�C Tj

Reverse Recovery Time:
1N5408 = Not Rated
BYM36E = 150ns

Nonrepetitive Peak Forward Surge Current:
1N5408 = 200A
BYM36E = 65A

While the BYM36E shows better Reverse Current figures at elevated
temperature (and the measurement point isn't the same), I think it unlikely
that the OP is going to operate them at such temperatures. Considering the
application is 50/60Hz (Period = 20/16.6 ms), Reverse Recovery Time is not a
factor. However, when it comes to Nonrepetitive Peak Forward Surge Current,
the 1N5408 is clearly better. Allied shows 23 hits for 1N5408, the least
expensive being $0.092 each in 1-24 piece lots (stk #568-0554).

Bryan

OK Guys. Let me lay it out for you so it is perfectly clear.

"Blue Box Thief" said that ham radio is ending because the internet and cell phones have reduced it to an old guy's hobby, and it contributes nothing of value to the advancement of knowledge or humanity. He also said there is virtually no interest in ham radio by the current generation of kids and young adults.

I responded with the following points:

1. The internet cannot be relied upon in an emergency.

2. Cellular telephones cannot be relied upon in an emergency.

3. The telephone system itself cannot be relied upon in an emergency.

4. Packet radio is losing favor for passing messages, but WinLink 2000 is taking its place.

5. APRS is not a waste of spectrum, and is very important for use in tracking emergency vehicles.

6. Ham radio is still very important to the government as evidenced by the millions of dollars being pumped into it by Homeland Security.

7. Young people ARE getting into ham radio as evidenced by the number in our area currently testing for a license.

8. Interest in ham radio is dependent upon how much work the local hams are willing to expend on young people.

9. Ham radio will continue to be important for emergency communications until satellite communications are fully developed.

Please point out to me which of the above are theories or involve ranting.

After many years of inactivity, I'm resurrecting the old ham shack but I want to keep it simple. I think one of these new fangled 100W HF, 2m, 70cm would fit the bill nicely. Here's a couple of features I'm looking for:

A real squelch KNOB for 2m & 70cm FM. (IMHO, the squelch control should not be buried in some menu!)

I'd like to set up a 2m priority channel that will interrupt any band or mode I'm in. I've seen this demonstrated on a Yaesu Ft-857D, but unfortunately this rig puts a substantial 'hole' in the audio every 5 seconds when it checks the priority channel for activity. This hole is long enough to swallow complete words and is very annoying!

AM/FM broadcast and shortwave would be nice but not necessary.

You know, I would use a dedicated transceiver for that.
A good used 2m rig can be had any where from $100 and up,
and it doesn't have to be a new one either..

I use a Kenwood TR-7950 for just that purpose. The audio
and selectivity is much better than on a lot of newer rigs,
and it does have a squelch knob, and an easy to read display!
It's hooked up via LMR-400 to a home made j-pole made out of 1"
thick-walled copper tubing.. This rig is also used for packet.

Good day all,

There are other factors that make avalanche rectifiers a good choice over standard types. Of course he should not exceed the specifications on the data sheets for either. Comparing apples to oranges here and overlooking the advantages of the basic behaviors of an avalanche device in an application that can be plagued with spikes.

Here is a couple references on the subject. There are many more out and about.

http://www.dynexsemi.com/assets/DNX_AN5370_Jul02.pdf

http://www.highvoltageconnection.com/articles/avalanche-diodes.htm

The "non-snappy" behavior, minimizes circuit ringing and can reduce RFI too! They are rugged and able to withstand reverse energy much better than conventional diodes.

If the OP was actually thinking of using resistors and caps as has been batted around relentlessly in this group and others, and when compared to other avalanche class devices, the .30 cents is a good price.

I have no doubt that if he decides to slap in 5408's with or without all the extra stuff, it will give him years of service taking for granted he has the PIV and "I" requirements properly. I simply wanted to offer him an alternative that eliminates the compensation network argument and adds another layer of protection.

Best regards to all,
Paul
WD8OSU

It is up to him as to how he wants to approach and remedy his situation.
  He is the engineer on the project.

I am having a perculure problem with the 570, when i tune up on all bands i get full power out put on all modes except for CW. When i switch to CW i can only get (typically 10 watts) out I can get 20 watts out on the higher frequences. I am wondering if this is an operator problem. I have done the full reset (a=b while power on) and the rig reset okay... but the low power on CW mode remains.

ANY HELP WOULD BE APPRECIATED... thank so much in advance.

Gus

Hi All,

I have a Kenwood TS-530S, but I'm sure this question applies to most other tube rigs: Why is there even a TUNE setting on the MODE switch? I know that with this switch engaged the "input power to the final section is reduced to prevent tube damage during tune-up", but why not just adjust CAR (CAR LEVEL CONTROL) downward for this step, since CAR also controls "carrier level during CW operation". Is it simply a matter of convenience, or do these controls actually do somewhat different things?

And while I'm on that subject of carrier level, I need to lower my 100 watts to about 10 watts. Is the best way to do this by simply lowering the CAR control? Does this technique give all the advantages, such as more protection to the finals (with a high VSWR) and generally longer tube life?

Another quick question for anyone who is familiar with the Kenwood TS-530S with the 500Hz CW filter installed, but I noticed that unless I move IF-SHIFT counter-clockwise, the audio output is not centered on 800 Hz, but more like 1200 Hz or so. Is this normal for Kenwoods?

Thanks for any help!

-Bill

>
Bill,
Do you have the correct CW filter installed?
Kenwood offered the C filter and the C-1 filter.
The difference is the center frequency.

I remember on my 930, there was a pitch control.
Do you have one? If so, how is it set?
73,
Ed, N5EI

Hi Ed,

Thanks for the response! Yes, I have the proper YK-88C filter installed. And it is not the actual CW pitch/tone that's off, but the filtered passband output into the rig's speakers. The audio output, unless the IF-SHIFT control is moved counter-clockwise to center it, has the CW signal at 800Hz, as it should be, but the 500Hz passband itself is not centered on it and extends too high from about 800 Hz to 1300 Hz...

Best Regards,

-Bill

Bill-

I haven't worked on the TS-530. In other similar models there are typically three crystals associated with the product detector, one for CW, one for USB and one for LSB. If the crystal is off frequency, it will cause a signal to be offset from its correct place in the IF filter passband.

For the TS-520, these crystals appear to be on the carrier unit along the left side of the radio on the bottom. Each crystal has a parallel trimmer capacitor. As you adjust the frequency of the detector's CW crystal, the background noise will sound different as you tune across the filter's passband.

You need a counter and a diagram to set the crystal frequencies correctly. The TS-520 service manual I downloaded does not seem to have directions to do it. I would connect the counter to the output of the carrier unit, and adjust each crystal to its correct frequency, selected with the front panel CW/USB/LSB switch. The IF-Shift control should be centered when making these adjustments.

If you can't read the frequency marked on the crystal, it should appear in the parts list.

hello gus,

are you using a dummy load for the test in cw ?

come join other ts-570 fans here,

http://groups.yahoo.com/group/TS-570/

you may want to post the question there also.

good luck with the radio.

73 jim

hi bill,

join other ts-5xx/8xx hybrid fans here

http://groups.yahoo.com/group/TS-520_820_530_830/

When in tune the power level is reduced to under 2 watts.

if you want to lower your power out the car control will do
this only for CW mode. If you want to use reduced power for SSB,
in the files section in the above yahoo group there is a small
external circuit that will use ALC to lower the power out.

Hi Fred,

Thanks for the tip! So that I don't FUBAR this up, please tell me if I have this right (changed from your original description to take advantage of my very limited equipment):

1. Set the MODE to CW and the IF-SHIFT to center detent position of the TS-530S.
2. Find the single trimmer capacitor located near the 500Hz CW filter (the trimmer capacitor will be able to shift the 500Hz CW filter center frequency by some small amount).
3. View the TS-530S's audio speaker output noise on my audio spectrum analyzer.
4. Adjust the TS-530S's trimmer capacitor until the audio (mainly noise) output is -centered- on 800 Hz, according to the audio spectrum analyzer's screen.

Would the above technique work?

Thanks!

-Bill

You can't shift the CW filter, so you must shift the xtal oscillator
that provides the BFO injection signal for the CW mode.

> 3. View the TS-530S's audio speaker output noise on my audio spectrum
> analyzer.

That is correct, you must adjust the xtal BFO trimmer so that the IF noise
shows up centered on the desired CW note frequency.

Hi Bill,
The carrier oscillator frequency used for CW(Rx) is the same as for USB. Because you want to have 800Hz difference between RX & TX, it would be best to just ensure the carrier oscillator frequencies are correct (and adjust as necessary). My TS120 & TS130 (same IF & filters) use:

USB = 8.8315 MHz
LSB = 8.8285 MHz
CW (Rx) = 8.8315 MHz
CW (Tx) = 8.8307 MHz

By the way, I have the narrow (270Hz) CW filters in my rigs. They're VERY sharp!

Vy 73,
Bryan WA7PRC

MILITARY AUDIO CABLE ASSEMBLY FOR SALE

NOMENCLATURE: Cable Assembly (Audio)
AN DESIGNATION: CX-1334/U
QUANTITY: 1 Each
LENGTH: 6FT-4IN
CONNECTORS:
Cable End 1: Frank U-77/U
Cable End 2: WHC JJ-026 (mates w/ PJ-054)
PINOUT:
U-77/U Pin A = JJ-026 Tip
U-77/U Pin B = JJ-026 Sleeve
GENERAL CONDITION: Very Good
PRICE: $20
PAY BY: U.S. Postal Money Order
SHIPPING: At Buyer's Expense
AVAILABLE TO: U.S. addressees only. No third-party
arrangements entertained.
GUARANTEE/WARRANTY: None expressed or implied
other than the representations in this announcement.
RETURN POLICY: No returns on this item.
PICTURES: Ask
CONTACT: BOB W5BTC
EMAIL: dc2light[at]md[dot]metrocast[dot]net

I recently bought an Icom IC-R3 (hand held communications receiver) and a Yaesu VX-7R handy-talky (can tune .5 to 1000 Mhz). Both of these devices can't pick up a single shortwave signal. And this is on a long wire antenna, not the rubber duckies. (They both receive great on VHF/UHF. The IC-R3 even manages to pick up fringe TV channels.) The same antenna connected to my old Kenwood 599 receiver brings in plenty of HF signals, both shortwave broadcast and amateur.

How can these two new receivers be soooo bad????? I live within a mile of an AM broadcast station, could that be the problem? (It doesn't bother my old Kenwood though!) Is anyone successfully listening to shortwave stations with either of these radios?

I'm was going to buy a new HF rig, but now I'm scared that it might overload on the broadcast station.

Does anyone have information on the Radio Shack HTX-10 10m radio? I am looking to get into HF on a shoestring (and before I get flamed 1) I know that 10m will be at best sporadic for the next several years; 2) the HTX-10 is a 10m only (and so I will not be able to access other HF that are open now; and 3) apart from a hack, the HTX-10 is phone only) and a used radio, power supply, and antenna seem to be inexpensive.

1) Are there known equipment problems (the mysterious silent transmitter)?

2) What is a good price for one of these?

3) Is there anything else that I should know?

My preference would be to purchase one at a Hamfest rather than ebay,
but if the price was right...

thanks

Mike (KD8EIB)

I was handed a TM-G707A this evening to use
on a business trip / rental car ... complete with
a cigarette lighter plug and a mag mount.

I am totally unfamiliar with this radio.
I'm sure that I can figure out the beast but if
my own experience holds true it will take
a good while before I am totally comfortable
with it... and being a loaner I won't have it
that long.

Hence my next question... rather than reinvent
the wheel...

Does anybody have a pre-prepared cheat sheet
that they can email me?

I will be using the manual that I downloaded
from Kenwwod's web site to preprogram a
half - dozen frequencies that were emailed
to me...

Hi Glenn,

well thats the main reason why i was looking for a tnc - i could run it with any os, and a rs232 prt.

the tnc i managed to pickup (pk232) comes with manuals so it should make things easier for me!

thanks

I remember reading about a little project in the 70s in hawaii called
aloha-net (maybe?)..

this did not *specifically invent* the internet, but I don't think
you can say that ham radio has no worth in this world of reliable instat
inexpensive comms.

granted, the internet is cheap and relatively instant..but as someone who works
in mobile telephony, i can tell you when the shit hits the fan, i would have
no problem to fall back onto ham radio.

you show me a UMTS phone that works 500Km when every radio mast has been ripped t
shreds by some storm.

or a hobby of someone who is interested in communications.

to be honest, i dont think getting every kid interested in ham radio
would be a good thing.
not a "snob" mentality, but the same reason not every skid should learn to play
the guitar :)

  The Internet provides reliable world wide communications for a
> low monthly price eliminating the need for ham radio's traffic

I dont agree with you on that.
If the cell sites have connectivity to the switching centre by E1/T1, uwave links
its quite possible that the infrastructure is dead after a storm/emergency
situation.

  Internet connections
> in concert with portable cell sites have eliminated the "Health and

And hea, thats fine. Radio hams is not the answer to everything.
Just the same as Internet is not the answer to everything.

> In summary, Ham Radio has joined the model trains, boats, planes and

No, I can't agree with you here.

Soccer (insert sport here)doesn't contribute value to humanity, does that mean
soccer is

a useless hobby?!

As someone who uses the Internet every single day on my life, I agree with the last bit.

But, also, on the Internet everyone can be an expert (or a dog, depending..).

The Internet has its places, but so does amateur radio.

ta,
bernard

When/If all comms is via satellite, then that will give a target/one place
of insecurity in comms.

Amateur radio works, in emergency situations, because if its unorganised
(in the best sense of tha word!) nature.

Much the same way as the Internet was/is intended to operate.

The only way to knock out amateur radio would be some EMF pollution (that
and kill all the old farts:)).

On 2007-04-14, Dick <w6ccd@k7yca.org> wrote:
> OK Guys. Let me lay it out for you so it is perfectly clear.

I think its me that has to lay it out for eberyone.

I said I had argued that Internet was actually a good thing
for Amateur radio:

"
> I remember going to a radio meeting(probably the only meeting i went to!)

> , dunno, about 7-8 years ago.
> I argued that Internet was good for ham radio, while alot of people (waay more
> experienced than I) argued the opposite. It'll kill DX, Packet etc.

> I argued the opposite. It'll give people opportunity to find information, access
> to other sides of the world, as if they were in their backgarden.
>
> A little bit of both seems to have happened. Is that a bad thing?
"

"Nobody" <rock_sci@hotmail.com> then argued the counter, that in fact, amateur radio was dead, and nothing more than an old guys hobby:

"
Actually, no that is not a bad thing for the masses. It is the end of ham radio for anything other than talking about your guns, cars, or aliments to other old farts. I am one of those old farts who has no illusions about the worth of ham radio in this world of modern reliable instant inexpensive world wide communications.
"

I then agreed completely with what Dick had said about the value of amateur radio.

I did however disagree with him about the demise of amateur radio when all communications go to satellite.

Now, to carry on with the conversation..
> "Blue Box Thief" said that ham radio is ending because the internet
> and cell phones have reduced it to an old guy's hobby, and it
> contributes nothing of value to the advancement of knowledge or
> humanity. He also said there is virtually no interest in ham radio by
> the current generation of kids and young adults.

I hope this is now fixed. :)

> I responded with the following points:
>
> 1. The internet cannot be relied upon in an emergency.

There will be times when the internet stops working, partially somewhere in the world.

> 2. Cellular telephones cannot be relied upon in an emergency.

Again, pretty much same as point 1.

> 3. The telephone system itself cannot be relied upon in an emergency.

This I might not agree with, but essentally correct.

> 4. Packet radio is losing favor for passing messages, but WinLink 2000

```
> is taking its place.

I don't knmow much about winlink 2000 so i can't say.

> 5. APRS is not a waste of spectrum, and is very important for use in
> tracking emergency vehicles.

Yes I agree. If this is a waste of spectrum, so is wifi, gps, etc..

> 6. Ham radio is still very important to the government as evidenced by
> the millions of dollars being pumped into it by Homeland Security.

This may be the case in America. No idea.

> 7. Young people ARE getting into ham radio as evidenced by the number
> in our area currently testing for a license.
>
> 8. Interest in ham radio is dependent upon how much work the local
> hams are willing to expend on young people.

Yes, I mis-quoted you.  It was "Nobody" that I was quoting.  Sorry
about that.

My point about satellite communications was not that it would do away
with ham radio per se, but that it would make ham radio much less
important for emergency communications (ARES/RACES.)  When technology
advances to the point where all telephones communicate directly with
satellites, with no earthbound connection, then the only thing that
could knock them out would be to take out the satellites.  Much less
likely than an earthquake, fire or flood here on earth.  I know there
are services available today like Iridium and Globalstar, but it won't
be practical for everyone until the price gets down to current cell
phone costs.

and until the available bitrates increases abit :)
last time i saw satellite phone it was something around 64Kbps.

There are a nr of TNC'S commercially available such as the MFJ
series, the KAM+, the PK-232's.  etc.  The limitations involved.
depend on whether the KAM's and PK232's have the upgraded ROM
chips in them. Make sure they do as the features are vastly improved
if the Upgrade chips are in them.

Exactly.  Didn't China just show that it can shoot down satellites?
I'm sure the US and Russia can, and possibly the EU as well.

Yes, but it that happens we won't have to worry about communications.
We need to find a deep cave.

There is a lot of digital traffic locally and via a gateway to through
the Internet. We use both voice and digital modes on VHF and UHF.

There is a lot of experimenting and building as well.

>>> has dissapeared in that time! Anyone have any creative ideas?

It depends on the area. Some are very active and other's are like a
desert.

I use a TM-D700 in the car, an all band all mode 897D in the shop and
an old Alinco DR610T in here for VHF and UHF. I also use a pair of
VX-7RBs and often run locked cross band.

Emergencies. If there is a major disaster and the power hasn't failed
yet, the cell towers become overloaded, often by the press and
therefore useless for any thing else. Nor can they remain on
emergency power indefinitely. The same is true for the Internet. No
power, no Internet. Strong storms can also render satellite
communications unusable as can solar storms. Of course those storms
take out GPS as well.

Storm chasing around here makes good use of packet/APRS and voice over
much wider areas then WiFi or WiMax

>>

Maybe the group here is just a bit more forward thinking as they
embrace many faces of ham radio as well as the Internet.
>>
>>A little bit of both seems to have happened. Is that a bad thing?

I see the Internet and Ham Radio as compatible and that, to me, is a
good thing.

Bill-

You may be able to accomplish your goal without a counter, but the trimmer you need to adjust is one of a group of three next to three crystals on the carrier unit. It is probably not on the filter board unless the two boards are combined in the TS-530.

I don't know for sure if the TS-520 manual is applicable. Although it shows the crystals and trimmers in a photo and on the circuit diagram, I couldn't find a procedure for their adjustment. It would help if you could find a copy of the TS-530 service manual.

The 520 and 530 are about as close as an elephant and a donkey.... About the only thing they have in common is tubes finals and the brand.

I'd have to agree with most of your observations...

I am in the southern california area, so yeah I see the lack of packet and even APRS use. In the real world for day to day use, it apparently has no value. Why should I care were some guy I don't know is driving? Do I need to know where there hams are in a disaster? I can just ask them on the radio.

I can basically dump any kind of data I want (voice, telemetry, messaging, file transfers, remote control) on the internet. Heck, I was instant messaging and watching myself on google earth via gps in literally the middle of nowhere, Wyoming last summer (nothing but freeway and a few cows) via Verizon 1xRTT/EVDO. I don't see 1.5MB speeds on ham radio at the moment ;) I have Verizon's EVDO in my laptop, a Sprint EVDO card from work (talk about dual-band!), and a cell phone from Cingular. Oh and an old-school 2-way pager. Other family members have Verizon cellular, and 1 has a 2-way pager on a different carrier than mine. Our main house has 2 electric feeds (#2 to a guest house) on reasonably seperated ciruits and 2 phone lines, 1 with DSL. I maintain a generator/UPS for my computers, refrigerators, microwave oven, and of course radios. We also have a vacation house 80 miles away with its own DSL. That is the only place not covered by simplex ham radio. We'd have to rely on repeaters and quite a distance at that... Or get some HF stuff, but why bother...

So why do I need a ham radio????

Well, cause I expect 80% of that stuff to fail when we have our next large siesmic event. I have a mobile 2/440 unit in my car and the other two have $99 cloned 2m HT's programmed both for repeaters and simplex. So amateur radio does serve as the last backup in case that long list of things all crap out.

However, our family expects to be out of communication during a large event. Our need to communicate really will just be for "health and welfare", just to see how everyone is. I don't expect to have anyone listening on the other end if stuck under a building. One of us will be working at the hospital, one at home, and myself will either be in school (at a different hospital) or at the local police dept. (volunteer) as soon as I can get there. We know to stay off the phones. "Yes dear, we all felt the same earthquake!"

Our local city fire dept does have a team of amateur radio operators, organized at the county level, which is the only way to go if u want to be successful. They have been used in the past in real conditions. During the fires in so cal, they used them mostly for fire watch patrols in the arson prone canyons around here. During a disaster, they're primary purpose will still be "eyes and ears". There is an HF station at our EOC for talking to "the state OES" but I dunno how that would really be used. They also have sat phones, so unless the chinese shoot us down, I guarantee you the emergency officials will pick that up first. Our local 800mhz trunked system is very robust with multiple sites for each system, with the abillity to run local in failsoft at each repeater site in case the main controller goes away. And don't forget everyone has a "Nextel" lol.

So yeah, I still see ham radio as the last resort. But honestly, I don't expect to use it much during a disaster. I will be doing my job/volunteer work. But I still keep everything charged and tested just in case!!!

As for the future of the hobby, yeah, keep getting kids interested in it. Since they all have cell phones now, it will be a challenge however to find some reason to use these "antique CB radios". I heard a QSO on the winsystem the other day between a local and a guy from Australia and then one from Japan a few minutes later. via IRLP of course...   It's this kind of integration with other services that *might* keep the hobby alive. You more creative types out there may have to some up with something new! And no, showing up to a modern school with a dirty t-shirt, greasy beard, Yeasu hat, and 6 radios, speaker mics, and oversized antennas hanging off of your beer gut will not inpress the kids. (Yes, I've seen this!!) One suggestion is to integrate with local public safety and present the hobby in this light; as an adjunct to police and fire. I wish I had more ideas as I think we can still be a valuable resource, but it may not be in the traditional sense that's been the "standard" for the past 50 years.

OK, enough ranting... back to the real world.....

Joey

Mike-

The Radio Shack HTX-10 is nearly identical to the Albrecht AE485S. see
http://service.alan-germany.de/Amateurfunk/AE485S/
for some more information.

If you search the web, you will find a CW adapter for the HTX-10. I wrote up a mod to add a lithium backup battery to keep memory contents alive when disconnected from power. (There are mods for the AE485S that do not work with the HTX-10.)

The HTX-10 was sold at a discounted price after Radio Shack discontinued it. I don't recall, but it may have been around $49. I've seen them selling for close to the original price at Hamfests. If it was over $100, you might find a better rig for just a little more. (Examples might be the Kenwood TS-520 and TS-130, which are around 20 to 30 years old now.)

The HTX-10 should work quite well when the band is open. The way things are now, the band could be wide open but you don't hear anyone. Nobody is on because they don't expect the band to be open! Learn to listen for the CW beacons.

Something to keep in mind is that, if the President declares a
national emergency, no one will be able to use ham radio for anything
unless they are a member of RACES. So the decision will be made for
you unless you are a member of that organization.

Might be useful to talk to someone in the same cave with you, but not too useful if the rest of the world has been melted down to the basic elements.

i was trying to get an order together and ordered all parts from Digikey. I got into
discussion with support, and I said the catalog could be a lot smaller and easier
to hold if they listed stocked parts. From the very beginning I always had problems
with DigiKey with stocked parts. Ordered the diodes from Mouser. Nice that many companies
have no minimum orders. That was a big deal years ago.

Unless you plan to have every single one of your team members get their amateur radio license, or you have authorization from a public safety agency to use their frequencie(s), I would suggest FRS radios.

With that said: I don't believe that Motorola is a good choice right now. Overpriced, bad support after the sale, and steadily-declining quality in terms of getting spare parts. They also sold off their major service depot to another company, who promptly relocated it to Guadalajara.

I would, assuming the proper licensing, suggest you have a look at Kenwood, M/A-Com, or Icom.

Happy hunting.

I am looking for a good used SG2000 the PowerTalk model, the one with the tuning knob. Either Ham version or Marina version is OK.

It can be WORKING or NOT WORKING.

It should be in good physical condition.

If you have one available, please contact me at: 73w7gsa@gmail.com

Thanks,

Bill
W7GSA

     I suspect that unless the fugitive hunting is done as a charitable
event, that Amateur radio wouldn't be allowable as a useage anyhow.

     I envision that you would want GMRS radios, and probably would want to use a repeater for reliability. I don't know if mobile repeaters are allowed, but would allow you to put an antenna up a little higher on say a Van, then transmit with a little more power to the "satellite radios carried by the bounty hunters.

http://en.wikipedia.org/wiki/General_Mobile_Radio_Service

is a good place to get started.

Schematic Needed Technisonics Model TFM-403 (Or TFM-30 or TFM-138) UHF FM Air to Ground Radio.
I am trying to troubleshoot an early serial number radio (25 KHz BW) that has a display multiplex problem. Only the upper left quadrant works and only briefly for about 30 seconds. The other 3/4 of the LEDS have all segments illuminated. When first turned on the upper left quadrant works and I can see and use most of the main radio functions. Then after 30 seconds, the upper left quadrant either fades away or some segments light up like the rest of the display. I am suspecting physical damage since the front lens is cracked and a keyboard button (#2) is popped off. Otherwise the radio seems to TX and RX OK!.

I need help finding a schematic of the control board and display. I have a TFM-403 UHF radio but I think the other two models mentioned above probably are similar.

I would also appreciate hearing from techs with familiarity of this

model. Also need some cosmetic parts if you can help. I want to fix
myself. not to send to a depot. Its for my ham shack! Thanks!

I have a Heath SB101 available. Pictures available.

Please send email if you are interested. Located in Clifton NJ USA.
Regards

I never could quite figure out exactly what a "Q Multiplier" does.

There is a Heathkit model QF-1 Q Multiplier on ebay and that got me to wondering.

I know what "Q" is regarding inductors and capacitors ("Quality factor", reactance divided by resistance) but I don't know exactly what a Q Multiplier does or how it connects (I assume it connects to a receiver but am not even sure about that). Obviously it "multiplies the Q" but of what component(s) or stage(s)?

Any of you boat anchor enthusiasts know about this?

Well this isn't the boatanchor newsgroup, though you'd often be confused by the recent equipment that gets posted about over there.

A Q-multiplier is a regenerative stage.

You might be familiar with the regenerative receiver, where positive feed back is introduced to a stage so the same signal is amplified, fed back to the input, and amplified again. This re-amplification allows for far more gain than if the stage only amplified the signal once, and it increases the selectivity of the tuned circuit involved. There is a means of controlling regneration, so you can limit the amplification, or kick it up so the receiver goes into oscillation, providing a beat note for reception of CW signals.

A Q-multiplier is the same thing, though it doesn't bother to demodulate the signal. Generally, the point is to increase selectivity in the IF section of the receiver. It connects to the plate of the mixer with a single connection, in parallel with that stage. INcrease the regeneration of the Q-Multiplier, and it increases the selectivity. It gives a nice peak, though does little to improve the skirt selectivity.

It's prime was in the days of the 455KHz IF, where the improved selectivity would actually make a difference. At a higher frequency, it would still increase the selectivity of the tuned circuit, but not enough to narrow the passband for voice or CW.

It was often an add-on for low end receivers, because for the cost of a single stage, you'd boost selectivity. Sometimes it was included in the receiver (and sometimes the effect was done by adding some positive feedback to the IF stage, so it could go into regeneration).

It was sometimes seen in more expensive receivers, where a variant was often the reason. A rearrangement of the circuit, and it could be used as a notch filter, to knock out a nearby signal, which was often more useful in receivers with good IF selectivity where the peaking was less of an improvement.

One early use for the Q-Multiplier, which never saw that much use, was for boosting the received carrier in reference to the sidebands of an AM signal. This peaking of the carrier made sure it was strong relative to the sidebands, and made for better AM demodulation. The Q-multiplier was good for this, since it peaked up the carrier but the bad skirt selectivity didn't attenuate the sidebands too much. The same basic notion that is the point of synchronous detectors for better AM reception today.

For a brief while in the sixties, there'd be construction articles with Q-Multipliers at the front-end of receivers. Someone described an early single conversion receiver with a 9MHz IF, and put a front end Q-Multiplier in to improve the selectivity of the single tuned circuit at the front end, to improve image rejection. (Though, it never fully made sense, since image rejection was much easier with the high frequency IF.) The scheme was continued in a few other receivers, basically because it had been done. And that was the end of that.

Q-Multipliers faded as IF frequencies increased, and good filters such as mechanical and crystal came along to replace a string of IF transformers.

So what about audio Q-multipliers? Do they function on the same principle?

Yes. The idea of a Q-Multiplier is to increase selectivity. They use regeneration (positive feedback) to decrease the bandwidth of a tuned circuit. The frequency can be whatever is desired. Q-Multipliers were popular at a time when most receivers had inadequate selectivity. They are relatively cheap and, with some limitations, work pretty well. As receivers with more sophisticated filters (like mechanical filters or multi-pole crystal filters) became available the Q-multiplier fell out of use.

BTW, the old regenerative receiver works on the same principle. In fact, one can see a Q-Multiplier as a sort of regenerative receiver working at the IF or audio frequencies.

Originally yes, though I've seen "audio Q-multipliers" described in
construction articles that are more strictly average audio filters.

They may even come out of the same place. The selectoject was described
in QST in the late forties, by O. G. Villard, and it uses the principle
of regneration to get better selectivity at audio. And O. G. Villard is
the name I'd associate with the use of the Q-Multiplier for better
reception of AM (there are references to a QST article by him on that topic
in an early ARRL SSB manual). But I've never seen a specific link between
the selectoject and the Q-Multiplier at the IF of a receiver, so I don't know
 if he came up with the IF Q-multiplier as we know it, or someone else did.
Certainly O. G. Villard, who died only three years ago, came up with
quite a few things important to amateur radio, including a lot of work
in SSB in the early days.

Interestingly, this month's QST in the 50 Years Ago column lists a
variable band width Q-Multiplier by Ronald Ives (April 1957.) The
article references the original Villard article in the April 1952
issue of "Electronics" magazine.

Among us kids who were licensed as teens in the mid 50's, the Q multiplier was a hot item. Most of us could not afford the latest and greatest receivers so the Heathkit Q-Multiplier was a desired accessory . I believe is could also do a notching function. I never had the Heath version myself, but many friends did. I had a Hammarlund HQ-100 immediately upon its introduction and as far as I can recall that was the first commercial radio to have a Q-Multiplier built in as opposed to an add-on accessory. More expensive radios had crystal filters and the Cadillac of the era, the Collins 75A4 had mechanical filters. The $500 price tag of the 75A4 put it in the "dream-on" category to those of us who only had part-time jobs or in my case (I was 13 when licensed) too young to even work at anything legally. It actually was pretty effective once you got to learn how to use it. As I remember it was far more effective on CW than phone (which was still heavily standard full carrier AM phone.) The Hammarlund version only had a "peak"
function. I believe the Heathkit version's notch function could be used for reducing heterodyne squeals although I have very liitle experience with that. I believe the Heath also had a third function, but I don't remember what it was.

     <snippety>

Best advice I can think of is to use a high-quality microphone, designed for either teleconferencing or broadcast (Shure has some nice ones -- I use their 503BG myself), and adapt that to your radio. You'll probably be best off using a low-impedance dynamic.

Happy hunting.

hi all,

i have been out of amateur radio for a good number of years.
i have finally got the room (garden and house!) for a few rigs,
and i'd like to get back into packet.

I would like to have the capability to do packet on V/UHF and also via
satellite (if I can get an antenna up for it).

I am also very interested in aprs (looks very useful) so the TNC
would have to be usable with GPS/etc.

I run a Icom IC-207 V/UHF, a Kenwood TH78e handie, and a Yaesu FT707 for HF.

I mainly use Mac OS X, or at times Windows XP, so the TNC would have to be
supported
by Mac TNC software.

any help greatly appreciate,

73s de

BERNARD,
I too am still active in PACKET however I use a Commodore 128 for all my uses. One for internet use and another setup for Packet on VHF only.   I use GERMAN software called DIGICOM V5 which uses the worldwide compatible software. I built my own TNC strictly for PACKET/VHF. In Hawaii we have a statewide packet digiptr setup, with the digi on top of Mt Haleakala.   I can easily reach that. I think its APRS which has a lot of addnl cmds I am not familiar with.   As to TNC'S that will work with PC's and or COMMODORE computers the following commercial TNC's are all suitable.
MFJ (makes several versions)
Packrat PK232's with latest upgrade ROMS also (useable with
          Commodores if adapter is also included.
KAM+   Kantronics also with latest ROMS is MBX and fully compatible.
Hope this helps. I was handling all MARS traffic via Packet between Ft Huachuca Az and Schofield Barracks in Honolulu for many years till I finally resigned last year. After 70 years with pre WW2 then MARS till last year I decided I better rest and take it easy.
                       Joe/KH6JF (previously ABM6JF) MARS Call

Make your own, from single diodes.  1kv at 3 or 5 amps are easy to
find.

A TNC can be operated from a dumb terminal through an RS232 port. You can use any terminal program with your computer--I've used
Windows HyperTerminal. You tend to need to keep the TNC command line book handy when using a terminal program. Software specific
to TNCs (e.g., HostMaster) make operating the TNC more user friendly.

Hope that helps.

The ARRL handbook might be helpful for building you own. You might also
try Peter Dahl. Here is a link to his rectifiers.

Check Kantronics and also the AMSAT and TAPR websites and bulletin boards. Some of the digital satellites required a manchester modification to the uplink, but I think that is passe. Bob Bruiniga is the guru on these so you might look him up and send an e-mail to him.

Hi Greg,

In addition to Joe's suggestion, Linear "Amplefire" guru Richard Measures
talks about rectifiers here: http://www.somis.org/D-amplifiers3.html
For reasons of heat-dissipation (and I expect also cost), he's not too fond
of the epoxy-encapsulated HV rectfiers -- he prefers to build his own stack
on perforated circuit board. If you want to heed his advice, you could
build a reasonably tidy bridge with a dozen 1N5408 (3A/1KV) rectifiers.

73,
Bryan WA7PRC

It would be wise to NOT use load-sharing (aka equalizer) resistors & capacitors. With modern rectifiers, if more than one diode is in a string, there will be no problem as long as they are of the same type number. See http://www.somis.org/D-amplifiers3.html.

Just curious how many out there still have active 2m packet radio in their area? Aside from APRS, I don't think anyone is listening... and even that seems to be fading here.

I've been rather inactive for the past 7-10 years and it seems packet
has dissapeared in that time! Anyone have any creative ideas?

I honestly can't come up with any use for it that I can't already do
over the internet... My laptop even has built in EVDO on two cell
networks (redundancy!). What more can I ask for? :(

PS. 3 month old TH-D7A for sale ;)

J

I am not sure about that (aprs I mean). In Ireland there seems to be alot
of activity. Maybe its only by a small number, but it looks busy.

> I've been rather inactive for the past 7-10 years and it seems packet
> has dissapeared in that time! Anyone have any creative ideas?

Well the only thing that hasn't been sent is pr0n..that seems a money-spinner
on cell networks. :)

> I honestly can't come up with any use for it that I can't already do
> over the internet... My laptop even has built in EVDO on two cell
> networks (redundancy!). What more can I ask for? :(

I remember going to a radio meeting(probably the only meeting i went to!)
, dunno, about 7-8 years ago.
I argued that Internet was good for ham radio, while alot of people (waay more
experienced than I) argued the opposite. It'll kill DX, Packet etc.

I argued the opposite. It'll give people opportunity to find information, access to other sides of the world, as if they were in their backgarden.

A little bit of both seems to have happened. Is that a bad thing?

> PS. 3 month old TH-D7A for sale ;)

How about you and me have a chat ;) http://www.runningwithbulls.com/blog/contact-us/

thanks,
bernard

Wise?
I could put just as many links saying the opposite , as in series , Not parralel and not paraletic , few few ohms aint gunna do what you yanks say "diddly squat" unless you get perfect diodes , read as matched ..paul

I wish I could find a use for it, but all good things come to an almost-end, I guess :)

I can't say the internet has been bad for amatuer radio... look at IRLP, echolink, etc. success. It seems everything comes back to voice traffic.... look at VoIP on the internet, we have a big fast data

network, and guess what? we want to TALK on it :D (or download p0rn.
lol)

I guess my voice capable HT will never be obsolete! And that's why i
keep it up and running...

Actually, no that is not a bad thing for the masses. It is the end of ham radio for anything other than talking about your guns, cars, or aliments to other old farts. I am one of those old farts who has no illusions about the worth of ham radio in this world of modern reliable instant inexpensive world wide communications.

Packet Radio has been reduce to APRS and a few DX clusters. I got rid of my packet station in favor of Internet based DX clusters 4 years ago. APRS is a completely useless waste of radio spectrum. The only real use of Packet is as a means of accessing and gathering remote data. However, there is little ham interest in this type of activity due largely to the fact that most sites that have power from the grid also have Telco access which means Internet. Most repeaters are idle now, even during drive time. SoCal used to be jam packed with repeats on 2 meters and 70 cm during drive time. There are more cell phones in use at the TRW and other local swap meets than hand helds. During the evening there is more activity on 2 meter simplex than there is on the 2 meter repeaters.

The Internet and Cell phones have reduced ham radio to an old guy's hobby. The Internet provides reliable world wide communications for a low monthly price eliminating the need for ham radio's traffic handling system. Even the slowest dial-up Internet access leaves packet radio in the dust. Chat rooms make random world wide conversations with people possible by anyone without requiring a test to prove that you can memorize a bunch of answers to questions without having to understand anything. Portable Cell sites have eliminated the need for ham radio emergency communications. Internet connections in concert with portable cell sites have eliminated the "Health and Welfare" traffic as well. Both portable cell and associated Internet access allow anyone to be trained to handle emergency traffic as well as health and welfare - no license needed. Cell phones have eliminated any of the freeway accident reporting needs formerly provided by hams through repeaters at "drive time".

In summary, Ham Radio has joined the model trains, boats, planes and other old guys hobbies as something to pass time away but which contributes nothing of value to the advancement of knowledge or humanity.

There is virtually no interest in ham radio by the current generation of kids and young adults -- hand held radios and repeaters are archaic to them (and rightly so) since they walk around with world wide reliable telco and internet access for pennies a day without having to prove that they are worthy of some arcane title.

About three years ago I retired and moved from California. Packet activity there seemed "sparse" at best. I had been deeply involved in packet radio in the beginning, but my interest faded, as did packet radio, with the growth of Internet activity.

When I moved to Oregon, I was surprised at the extent of Packet activity in the Pacific Northwest. Oh, it isn't like it used to be in the early 90's, but it exists, and the networks are pretty good.

The domimnent reason it still survives is probably emergency services. ARES and RACES groups are pretty strong up here, and apparently Packet radio is one of the key portions of ARES communications.

In fact, I'd say that the newer TelPac nodes are the primary reason Packet remains a viable communications use for emergency services. The mere fact that now we can easily send, and receive packet radio messages from areas without any other communications services, and route them to the Internet, and receive them from the Internet, makes it a pretty neat resource.

Add to that APRS and Weather watch using packet.

I think I am willing to try using them without caps and resistors.
I allready have 1KV 3 A HER308's. And I have a bunch of thermal
epoxy. I just might purchase some of these to make things easier.

I for one am still useing Packet and run a beacon on 145.07 vhf.
We have a statewide system with the main digiptrs on tops of
Haleakala and Maunakea so coverage is near statewide. They
use APRS, but all the worlwide params are effective as the params

settings etc are standarized all over the world.   Different
types of software and different types of TNC's are not a problem.
They may offer addnl cmds in the params, but the essentials
are still standardized!

The parallel resistors and capacitors in parallel with series diodes dates from the early days of semiconductor diodes.

The resistors were there to "equalize the reverse voltage drops". The diodes back then weren't particularly great, and there were worries, I can't remember if real or imagined, that the diodes couldn't handle the reverse voltage they'd see. The diodes were there to make sure each saw the same reverse voltage.

The parallel capacitors were to protect against spikes. Again at a time when there was real or imagined worry that the precious semiconductor diodes would be easily damaged.

This was the same period that would always warn about heatsinking the leads of semiconductors when soldering them, to protect them against heat.

YOu'll see this talk of parallel resistors and capacitors with the use of series diodes in older handbooks and magazines, and then it fades away. I doubt it will hurt anything, but either the diodes got better (in those early days one often had no choice but to put some diodes in series just to handle average B+ voltages, let alone outright high voltage), or the whole thing was an illusion, and wasn't actually needed.

Series resistors limit the current, to protect the diodes against current surges. The 1971 ARRL Handbook says you need them if the winding resistance of the transformer are too low to do the limiting itself.

Most of the time when people make statements like the above, they have spent little time in actual emergency communications. Nor do they understand why we still need amateur radio in emergency situations.

Emergencies in our part of the country, as well as many other areas, are usually forest fires. Telephones, cel phones, public service, television, the internet, etc. rely on telephone lines and mountain top locations. When there is a major fire, those things are toast. I have yet to see any portable cell towers available in our county. Even when the phone lines manage to stay alive, they are soon taken down with too many calls to and from the area trying to calm relatives. This has happened time after time in major emergencies. So you have no telephone, no cellular telephones, no internet and no communication between public service entities like police and fire.

Our county, the largest in the state, has state-of-the-art public service communications with links all over the state. But guess what, every single police department, sheriff's department, Red Cross, Salvation Army etc. has an amateur radio station permanently installed in their facilities because they know some day they will need us. Why do you think the Office of Homeland Security is currently spending millions of dollars equipping ARES/RACES stations throughout the country? It's because the government knows that all the expensive equipment in the world can be taken out with a major emergency. That's also why amateur radio continues to hold on to a major portion of the frequency spectrum. It's sure not so a bunch of old farts can play radio and talk about model trains.

With regard to packet radio. Yes, it has seen better days. Most ARES/RACES organizations are going to WinLink 2000. But APRS is sure not obsolete. If you send out several Jeeps on a search and rescue mission, and want to know their exact location at all times, what else will give you that information?

No young people entering amateur radio? How do you explain all those that are testing for their license every month? Last week we had two 11 year-olds, and a 13 year-old all pass their technician licenses. And their father drove them 100 miles to get to our testing location! It's true there are more older people in the hobby today than young, but there is still a steady stream of teen-agers and even college students coming into the fold. It's a matter of how the local amateurs present the hobby to them. If you don't work at getting people interested, then you aren't going to get new hams. It's as simple as that. We use things like IRLP and balloon flights tracked with APRS to interest young people. If the only thing you show them is how to use an HT, they will just show you their cell phone and smile.

Some day, when ALL communications are via satellite, and nothing on the ground can be destroyed by flood, fire, earthquake, tornados, terrorist attacks, etc., then amateur radio will lose its value to the country for backup emergency communications. Until then, people will continue to depend upon amateur radio even when they don't realize it.

The HER308 looks like a 1N5408 with a specified reverse recovery time. I like specifications those FFPF04F150S damper diodes. Digi-Key has them available in only large quantities (non-stocked) but Mouser shows them in-stock in small lots. Not knowing the dielectric capability of the plastic TO-220 case, I'd probably mount them (with heatsinks) to an insulating base.

Bryan

Dick,
I do not follow your ranting and theorizing of Ham radio nor
useage of Packet, PSK, and other forms of msg handling.
As we all know by now, the WWW is not infalible, nor the
CellPhone industry nor many of your other theories.
After 70 years with AARS/MARS etc I for one am proud to be
a member of Ham radio and all its requirements. And yes
Hams have access to the Space Ship as I understand it.
So accept my dissent to your comments!!!!!
Joe/KH6JF

I'll chime in, too, on the opinion that "no caps, and no equalizing resistors is OK." I've built a lot of full wave center tap diode strings and full wave full bridge diode strings and with a lot of diodes. I _would_ recommend, however, that you put in lots of diodes (eg. all 1 kv). I put in enough in each leg so that my PRV sum for the diodes is *at least* two times the peak AC volts. So, for a 1 kv DC output, I would have at least a sum of 3 kv of PRV diodes (or, three 1 kv diodes in series, preferably four, for each leg). If you get spikes going up that high, they are usually going to be very transient and the diode will act like a zener diode and start drawing zener current in the reverse direction. As soon as that happens, it puts a _load_ on the transient and, unless there is a ton of energy in the transient and it is quite long, this will keep the voltage from going higher. I've seen lots of gear with lots of diodes in the HV legs without balancing resistors or capacitors, and I've been using big diode strings in 2-3 KV DC supplies (kw level) for decades, and no

problems. Also, the inductance in the primary of big transformers should
tend to limit current surges anyway. You might get bigger voltage surges
when you turn the power switch off.

I have no idea what you are referring to in my message.  Please list a
couple of the specific points in my message, and what you disagree
with.  Nothing I mentioned are theories, nor is it ranting.  I can't
believe you even read my message.  It would help if you would leave at
least part of the message you are responding to.

------A total SNIP of everything and on to a better idea.-------

Consider using avalanche rectifiers and it makes all the stuff about the caps and resistors a mute point. There are some good application notes out there on this subject and the whys and wherefores of it all.

For your needs the BYM36E might be a good choice. At around 30 cents a piece hard to beat.

http://www.alliedelec.com/Search/SearchResults.asp?N=0&Ntk=Primary&Ntt=bym36e&sid=461EC8009E6617F

Best of luck in your project!

Regards,
Paul

Jim, I agree with Antonio's diagnosis of a shorted tube. However, you
can also post at http://groups.yahoo.com/group/ham_amplifiers/

The Yahoo amps board is a good place to ask for info about improvement mods for the TL 922.

Dloyd

Taking a quick look at the schematic I'd guess the control-voltage power
supply, also used in the bias circuits, isn't working.

It would be interesting to measure the voltage across the keying jack.
("RL CONT" on the schematic) My guess is it will be very low or zero.
I'm not entirely sure what it *should* be but my guess would be on the
order of 100 volts DC. (so be careful, it may be enough to give you a
shock!)

If this voltage *is* very low or zero, I would be suspicious of D1 or C3.
(or the transformer T2, but I hope not as the transformer will be
difficult & probably expensive to replace...)

I *doubt* it has anything to do with the Soft Start module.

You have described the classic symptoms of the heater-grid short inside the 3-500 [at least one of them].

The heater is tungsten. Tungsten grows crystal 'whiskers' over time. It is well documented physics. These whiskers are thin as silk thread [or thinner]. In many instances they can be removed with a simple application of 110 VAC between the heater and the grid. Some people will charge a 10 uF capacitor to several hundred volts and discharge it into the grid/heater short circuit. This will 'cure' the 'whisker' issue [pop the fuze] in about 90% of the instances.

A second option exists. When you first power up the 922 don't panic over the current being drawn and jump to turn it off. Wait for 10 to 15 seconds to see if the filament heating and resultant thermal expansion will eliminate the short for you. [This is much less expensive than buying a matched pair of 3-500Z's]. I have been running my AL-80B with a transient [heating] grid/heater short for over a year. Once the transient state has returned the circuit to normal operation, the amplifier works 100% as designed. [BTW: I have a spare 3-500 that I will use if the short eventually becomes a 100% hard failure].

Hi Dave

Wouldn't the 15 second run burn out the filament supply transformer though?

I'm not aware of the 922 design details that contributes to the 'transformer' issue.

The normal filament current is about 14 amperes at 5 volts. The grid/filament short generally draws less than 100 ma of grid current and less than 300 ma of plate currnet. An abnormal current of less than 0.5 ampere is not a problem for the major floating secondary winding of a filament transformer.

The design of the bias circuit can be a totally different circumstance. In Ameritron amplifiers it is a self bias through a series of resistors and/or zeners. My Al-80B uses about -15 VDC as cutoff bias. In the 922 ... I have no data.

Restated, remove the tubes and 'pop the short' if there is a concern in the 922.

In the TL-922, the filament transformer would burn after a short while because on that same transformer there is another secondary (80 Volts) which gets nearly shorted to ground when a filament-to-grid short occurs in a tube.

Dear All,

Update:-

Had the case open and indeed 1 of the 3-500zs was showing a grid/fil short, however a little inadvertent rough handling cured this and when reassembled the amp worked fine for an hour or so. Then it was switched off for lunch and after lunch the problem had returned and this time is persisting despite removal of the valve. I haven't yet tried the mains blast across the pins as I'm not that confident!

good news is that the filament transformer seems fine and hasn't been apparently damaged by the few very short excursions into short territory.

A new valve will be ordered. May try the whisker zap if feeling brave at some point

Learnt a bit today, I now have better understanding of the innards. Interstingly the previous owner had done some but not all of the Measures mods, e.g. cathode and low Q VHF parasitic suppresors.

thanks for all the advice

Jim G7NKS

You can use a charged cap to "blast" the short, might be less
dramatic than the unlimited current behind the mains.. This
sometimes vaporizes part of the grid structure and affects
tube operation..

Pete

Do any of you know the characteristics of the cigarette lighter adapter
that is used with the Yaesu/Vertex VXA-700 2 meter and airband HT?

Does it just convey the 12 volts (or 13.8 volts or 14.2 volts or whatever it is at any moment in time) directly to the HT, or is there any kind of filter or voltage limiter that's internal to the adapter?

In other words, can I just feed 13.8 volts directly from a car battery to the HT to run it and charge the battery?

Looked on the Yaesu and Vertex Standard websites for information and couldn't find any reference at all to the VXA-700 ... wonder if it has been discontinued...

Not as good as Sunrocket. They are much cheaper. 200 dollars per year, and 3 extra months free when you first sign up. This comes to about 13.50 per month. Nice try!

The first pre-production pcb has been built and put into service.
Pictures of this board are now available at
http://www.telstar-electronics.com/default_files/NewProductDevelopment.htm
Several other additional boards will be built and put in service
within the next two weeks. After this pre-production pilot... final

adjustments will be made to the pcb to allow for easier/better manufacturing before the final pcb is released.

P.S. I may be looking for several radio techs in the next few months that would agree to do some beta testing. Email me with your qualifications to be considered. The beta units will be free of charge... and I would only expect a detailed performance report in return.

Real Compaq Pro Signa Server. THIS IS a oldly Pentium 75 running NT 4 Server.

I was told these vintage machines were good for a Linux reload and to run them for IRLP.

9 gb SCSI drive. 64 mb or ram.

The computer is on Long Island. I am willing to trade for something I can use.

Maybe a kick around 2 mtr HT. something I can throw in my back pocket.

Mike WB2GLW

Xref: g2news1.google.com rec.radio.amateur.equipment:11741

I have a TS-930s That has been in storage for 13 years. I fired it up and it receives fine. Everything seems in good shape except there is no RF output. In the tune mode the VC reads almost full scale where the IC reads low at about 1a. On CW there is no output and I get the same meter readings.

It has been so long since I have used the radio can anyone tell me what I am missing? Oh Yes, the carrier is all the way up. hi hi

I am getting real frustrated. I have been off the air the same amount of time the rig has been and really want to get back on. I can use an old 830 I have here but it's controls are so corroded I am going to have to go inside and attempt to clean them.

Any help would be appreciated. Many thanks,

Tim, KQ8M

Why do you sell a rf amplifier that covers "26-30MHz Coverage"
It sounds like you are selling a CB amp which I thought was illegal.
Just curious, Thanks

Hello,

I'm planning on picking up a VX-7R but wanted to know if the transmit
audio problem from the waterproofing was ever fixed and if so, which
model numbers to look out for? I'm planning on getting the black
one...

Thanks

OK using a bit of 'sideways logic' I see that the 12V 'adaptor' (E-DC-5B DC Cable with Cigarette Lighter Plug) listed for this radio also cross references to a yaesu handy (VR500) I've got that, quite happily, takes a 'neat' 12V in to charge the 2 'AA' cells that are in the radio. So I would say the 13.8V from your car would be fine.

I just repaired a TS-930, that had the RF PA driver transistors blow

up due
to overheating of the power supply.

your VC goes full scale ? ?   ! ! ! ! ! ! up to 42 votls ! ! !
it should go to 28 Volts.

it sounds like the power supply pass transistors failed, and shorted
out, (due to heat)
and put the 40 volts to the RF Final PA. This will blow the driver
transistors.
A common problem in this radio.

are the fans working? it is important that the fan to the power
supply comes on,
or the power supply will over heat, or results I just mentioned will
happen.

what is the serial number to your radio ? ?

Kenwood added to the power supply circuit, later in production,
but it will not help the overheating problem.

Good afternoon, Brian.

The point of my question was, I want to fabricate a DC power cord for the
VXA-700 with a Powerpole connector on one end, and I need to know if I can
just feed 12 volts into the side of the VXA-700, or does their cigarette
lighter adapter have some kind of voltage reduction or current limiting
circuitry in there?

The Yaesu adapter which I bought for use with my VX-5 apparently
contains a surge suppressor (a varactor or zener, I suppose) and a
fuse.

I believe that the intent is to make sure that a high-voltage spike on
the car wiring (triggered by "load dump" - e.g. turning off the

headlights and thus abruptly reducing the current load on the system when the alternator is running) doesn't reach and burn out the radio. Automotive electronics for "12-volt" systems are normally engineered to be able to withstand a short spike of as much as 50 volts above ground... that's the magnitude of what you have to be concerned about.

I've fed my VX-5 power directly from a 12-volt gel cell which was not connected to a car electrical system, and it was perfectly happy with it. If that's all you're planning on doing, you can probably just use the PowerPole arrangement.

If you plan to have the radio plugged into the lighter outlet when the car is turned on, however, it'd be safer for you to provide some voltage clamping and filtering, just as Yaesu does.

I have just brought a second hand VX7r black model about 1.5 years old and
the transmit audio is fine so I have been told and I asked one ham who would
have told me if it wasn't

AFAIK noise suppression and spike removal is all thats in the box, and maybe
a fuse.

For current limiting, use a 2 amp fuse in the supply.

Also note that they sell a lead with no plug on the far end to connect the
radio to a shacks supply.

The MFJ-998 IntelliTuner� has been advertised on the cover of MFJ's 2007 Catalog since late 2006. Orders have been placed at several major equipment vendors/dealers for several months. Production was promised in March 2007! But that date has not been met. I am sure that there are many folks out there that would like to know the latest information of this new product. Many are waiting to hear how it works and when they can add it to their systems. Feedback is requested.

I have the old MFJ "Differential T tuner which has served me well.
Only thing that irritates me a bit is that the roller inductor
is not gear driven.  It handles 3 KW power, but slippage with
the belt driver is a nuisance.  MFJ had a later version that was
gear driven, but I just accept the slight irritation of my slipping
belt coming up with different readings on the counter dial.

Tim -

Kenwood released 15 service bulletins for the TS-930S, while it was in production.
Here are some of them:
http://www.qsl.net/ki4nr/kenwood/

Original soldering and power supply issues are often mentioned in repairs for this radio.
Personally, I would perform a close 'visual' inspection of the electrolytic capacitors and components in the power supply section.
Some additional resources and reference materials:

W6NL/HC8L, D.B. Leeson's TS-930 notes (2001) - Adobe Acrobat
http://www.kkn.net/~k5tr/ts930fix/w6nl930.pdf

N0SS, Tom Hammond - TS-930 digital board
http://www.kkn.net/~k5tr/ts930fix/ts930doc.pdf

Piexx has an upgraded microprocessor board for the TS-930
http://www.piexx.com/index.p....s_id=25

KI4NR, John Bolduc (LPC Wireless) - Phone 386-774-9921
http://www.eham.net/reviews/detail/5210
was performing TS-930 and TS-940 repairs,
BUT check with him (he may have stopped recently, due to health).
http://www.qsl.net/ki4nr/index.htm

Clif Holland at Avvid is a good resource -- and is again accepting radios
for service.

Tim -

Regarding your older TS-830 -- no reason not to have this in good shape.
Maybe you have not read K4EAA's web site:

About Kenwood Hybrids
http://www.k4eaa.com/about.html

Kenwood Hybrids - FAQ
http://www.k4eaa.com/faq.htm

The output power is not adjustable in SSB.
For carrier modes (cw, am, fm) it is adjusted with the CAR control (outside ring on Mic gain control).

I have some paper copies of the S-Comm 7K Repeater Controller manuals. All
I'm asking is $5.00 + shipping which will be around 1.50 media rate or if it
can't go media rate then $4.10 for flat rate envelope. The $5.00 is to
reimburse for the copy cost.

FOR SALE: RADIO RECEIVING SET AN/GRR-5

JAN DESIGNATION: AN/GRR-5
NOMENCLATURE: RADIO RECEIVING SET
CONSISTS OF:
CABINET, ELECTRICAL EQUIPMENT CY-615/URR (1)
RECEIVER, RADIO R-174/URR (1)
POWER SUPPLY PP-308/URR (1)
FREQUENCY RANGE: 1.5 - 18 MHZ
MODES: AM, CW, MCW
OPERATING POWER: 6 OR 12 OR 24 VDC OR 120 VAC 60~ 1�
POWER CABLE PROVIDED: 120 VAC 60~ 1�
ANTENNA PROVIDED: 4 THREADED MAST SECTIONS
OTHER THINGS PROVIDED: TM 11-5820-284-15,
ORGANIZATIONAL, DS, GS AND DEPOT MAINTENANCE MANUAL;
SPARE POWER SUPPLY PP-308/URR
REMARKS: I USED THIS RECEIVER FOR YEARS. UNFORTUNATELY,
IT NO LONGER FITS INTO MY OPERATING PROFILE AND IS
EXCESS TO MY NEEDS. OVER THE YEARS I ROBBED A VIBRATOR
FROM THE SPARE POWER SUPPLY AND AT THIS POINT THE
RECEIVER PROBABLY NEEDS A NEW TUBE OR TWO BUT THE

EQUIPMENT IS OTHERWISE COMPLETE WITHOUT CATASTROPHIC
FAILURE FOR THE TIME I HAVE OWNED IT WHICH HAS BEEN A
BUNCH OF YEARS. PRESENT OPERATING CONDITION UNKNOWN;
SOLD AS-IS.
PRICE: $75.00
PAY BY: CASH OR POSTAL MONEY ORDER
DELIVERY: BUYER PICK UP IN SAINT MARY'S COUNTY, MD
RETURNS: NO RETURNS ON THIS ITEM
CONTACT: BOB CARTER, W5BTC
EMAIL: dc2light[at]md[dot]metrocast[dot]net

Hello,

I am looking for a good used SG-230 or SG-237 antenna tuner.

Please contact me if you have one available.

Thanks,

Bill

Is there any way to add IF-stage DSP (not AF DSP... I know that's already there) in the Icom IC-706MKIIG?

The pilot lamps burnt out again on my brothers Kenwood TR-751 for the LCD screen. I replaced them a couple years ago for him. Has anyone ever changed over to a LED in place of these grain of wheat bulbs? What kind/color LED used and what value dropping resistor?

Tks JCB,   N9JB

The Puyallup hamfest was this past weekend (biggest hamfest in Washington State). For the second year in a row, it seemed about the same size as the year before. In previous years, it was shrinking about 20% a year or more. Lots of boat anchors and other stuff that is expensive to ship, the lighter stuff seems to all be going to Ebay. Impressions:

1. There is only one store in attendance (HRO), and they were doing a lot of business. Other stores should consider coming as well. I guess the last "local" ham store has gone under, they weren't there.

2. A couple of ham related from previous years organizations weren't there.

3. Most of the heavy smokers from 20 years ago, who were pushing their oxygen carts around 10 years ago, aren't there anymore.

4. A lot of people were looking for newer stuff.   Some "new technology" vendors could make a killing. The first that comes to my mind is MPEG FTA satellite TV. If someone had set up a demo outside, when would have been sold out. There needed to be seminars like there was in the past. ICOM is local, and while they had their normal nice booth, should have a D-Star traveling road show.

5. The crowd lines up about an hour before the opening, the line winds back and forth, and when the doors open, there is a mad rush from different parts of the line. They really need to set up "velvet ropes" to organize the line; one person saying "please stay in line" doesn't cut it.

6. The snack bar needs to improve.   People are often travelling several hours to attend and probably leaving early because they are hungry. They probably should be selling coffee and doughnuts to the people in line before the opening.

7. The "talkin" repeater was pretty quiet. I think this is a bad sign for future growth in ham radio.

I always enjoyed the Puyallup hamfest when we lived in Spokane.

It's hard to read the future of ham radio. I think it depends greatly on how a community works to develop the hobby. Where I live in northern Arizona, we have a lot of growth. We have been testing from 5 to 15 applicants at each VE session, and we have three sessions just this month alone! And not just technicians. At our test session last Friday we passed 3 new generals and 2 new extra class. Also our local ham radio club is bigger than ever.

Much of this is due to very effective local training, frequent demonstrations at places like art fairs, good leadership at our radio club, and a very active ARES/RACES emergency communcation group. On the other hand, I have also lived in communities that don't have these things, and the ham population is stagnating or even decreasing. If you want the hobby to grow, it takes work and dedication, but it is still possible.

Dick - W6CCD

Speaking as a long-term buyer/vendor there, I would like to offer some observations of my own.

> 1. There is only one store in attendance (HRO), and they were doing a lot of business. Other stores should consider coming as well. I guess the last "local" ham store has gone under, they weren't there.

Regrettable, but true. The fellow who owned the place was running it out of Bremerton for a while, and then finally retired.

> 2. A couple of ham related from previous years organizations weren't there.

??? Did you check upstairs? Seems like all the club tables were up there.

> 3. Most of the heavy smokers from 20 years ago, who were pushing their oxygen carts around 10 years ago, aren't there anymore.

Also ??? I don't ever recall seeing more than 1 or 2 folks with portable oxygen in the 12 years I've been attending the thing.

> 4. A lot of people were looking for newer stuff.   Some "new technology" vendors could make a killing. The first that comes to my mind is MPEG FTA satellite TV. If someone had set up a demo outside, when would have been sold out. There needed to be seminars like there was in the past. ICOM is local, and while they had their normal nice booth, should have a D-Star traveling road show.

Agreed. Icom didn't seem to be doing nearly as much with their booth as last year. Only two people staffing it, too.

HOWEVER -- The downside to this trend is that it feels like the art of tinkering is struggling for life. I had a pair of serial data analyzers on display, and I got several questions about "What OS they were running," and more than one assumption that they were simply odd-looking computers.

That would not have happened, say, ten years back. Anyone skilled enough to know about such gear would have recognized them for what they were.

There are other signs. Boxes of parts that normally spark much digging and probing barely rated a glance, and I saw a lot of sellers going home with much of what they brought. Even I found myself (finally) giving stuff away that would have easily sold, for at least a minimal amount, some years ago.

> 5. The crowd lines up about an hour before the opening, the line winds back and forth, and when the doors open, there is a mad rush from different parts of the line. They really need to set up "velvet ropes" to organize the line; one person saying "please stay in line" doesn't cut it.

Did you suggest this to the Mike & Key club staff? The best suggestions on the planet (and I think this is a good one) won't ever get a tryout if you keep it to yourself.

> 6. The snack bar needs to improve...

Essence, no argument there! $3.75 for a questionable hot dog? $2.75 for a bottled drink?!

FWIW, this has always been a sore point for the event.

> 7. The "talkin" repeater was pretty quiet. I think this is a bad sign for
> future growth in ham radio.

I'm surprised you would make such a broad assumption from so little evidence. The talk-in channel was very active early Saturday morning, at the crack of dawn. I would also point out that the Puyallup swap has become well known enough that many folks already know where it is.

Also, a clear map is provided on the flyer. Most of the hamateurs I've met are pretty good at basic navigation.

I will say this much. I've noticed that the overall quality of the Puyallup event, in terms of quantity and quality of stuff, tends to run in three-year cycles (first year phenomenal, second year good, third year mediocre), and 2007 was at the bottom end of one of these cycles.

With that said -- It wasn't actually as bad as the one in 2004 (which was another bottom-of-cycle event). In fact, this one reminded me more of the mid-cycle swaps.

If the cycle continues to run true-to-form, 2008 should be amazing.

In conclusion, I would add that amateur radio is like a mirror. You get back exactly what you put into it. If you truly care about the hobby, do whatever you can to help it grow. Teach a license class, volunteer at a club demo booth, participate in an event that's using amateur radio for communications, etc.

Keep the peace(es).

The biggest issue with LEDs is the dispersion angle -- even the wide-angle types are pretty narrow for backlighting a display. A friend who runs the service department for a commercial sound company says to grind/file off the lens of the LED(s) you intend to use.

What kills the lifetime of incandescent lamps is inrush current. If you stay with that type, you could use a constant-current regulator (an LM317 configured as a current regulator comes to mind). You may need to use lower-voltage lamps, to offset the regulator's 1.2V drop.

73,
Bryan WA7PRC

In previous years, it was shrinking about 20% a year or more. Lots of boat anchors and other stuff that is expensive to ship, the lighter stuff seems to all be going to Ebay. Impressions:

Ahhhhh, but the real "Question" on everyones mind IS.....

was KL7BB in attendance?????????

I have this Courir PA (with 2 ea. 811A) but need info about how to repair
the broken tuning wire
or tuning string to be able to read the scale on the frontpannel that shows
the position on the PA-coil.
Hope this info can be scanned and sent over, or is the manual available
somewhere?
73 frm Jon/LA8WF

Micheal

You have a good memory. MHZ Electronics was dumping
5.9XX USB, LSB and CW filters in full page ads in Ham
Radio Magazine back in the late 70s or so if my memory
holds. I remember buying several of each for future projects
that never have materialized.

Pete

Yes, and there was at least one from previous years that was missing, and I
think more. But for the life of me, I can't figure out which one(s).
Amsat, perhaps?

I'm not sure if that is funny or sad. Probably both.

The best hamfest I ever attended was at the Charles Wright Academy in
Tacoma. They let the sellers unload right outside the door, had free coffee
and doughnuts for the sellers when they showed up and all morning long.
They might have even fed them lunch, too. The sellers were in such a good
mood/sugar high that the deals were really good.

>> 7. The "talkin" repeater was pretty quiet. I think this is a bad sign

I should have elaborated more. In the past, I've heard a lot more
out-of-towners/first-timers on the talk-in repeater, which I tend to think
of (perhaps wrongly) as new blood (or maybe potential new-blood). When the
talk is more of "Hi Charlie." "Hi Mel." "Gonna be 15 years in a row for
me." "Ten for me." "Ok, see you there." it makes me think of "preaching
to the choir".

I was wondering if you could help me with a problem. I have a TMD-700a. I also use a Digital Motorola radio in my police car. When I transmit on the Digital it breaks squelch on the TMD-700a and I have to turn it off or all the way down. I have rerouted antenna as well as power cords. We have several of these and I seem to be the only one that has this problem. Do you have any ideas how I might fix this problem.

I'm at my whits end, for the life of me I don't know how to make the HM-14 produce DTMF tones with the IC-48A.

Usually you hit PTT and dial away, but i'm getting zilch. Is there some trick on this rig?

The IC-48A was my Dad's but he's SK now so I cannot figure out how to make this produce DTMF, the manual doesn't even mention it.

HELP!

I'm interested in getting into HF PSK-31 and RTTY. And maybe I'll try
some of the other sound card based modes too. Comes the question of
how I should configure the dedicated ham station Winbox. Is there
anything to be gained by spending money on say some Creative Labs or
Turtle Beach sound card or another or are the usual generic
motherboard "sound cards" good enough   . . ?

Thanks,

Brian w3rv

Kelly:

The quality of your sound card beyond a SoundBlaster 16 is wasted. The effort is better spent in a better quality audio interface between the radio and the PC. The transmit and receive audio MUST be transformer isolated for best results. I also like to keep D.C. off of the transformer windings by using a .1 uf series capacitor. Your PC is ground referenced to the A.C. main electrical system and your radio is ground referenced to something else. Use a lot of ferrite beads to keep the RF out of the audio and the use of transformer coupling cleans up the rest.

Tom

If the card or on-board system is "SoundBlaster Compatible," and made within the last 5 or 6 years, it should be OK. I have used PSK with many computers and cards and have never had one that didn't work because of the sound card. Put your money toward a good interface. It's hard to beat the RigBlaster line. I have never used one, but I have heard good reports about the the MFJ interfaces.

You are doing it correctly. Hold the PTT and press the DTMF buttons.
I have right beside me an Icom IC-28H using that mike, which should be
wired exactly like the IC-48A at the microphone jack. Could be
something wrong with the HM-14.

I picked up a loop antenna made by Electro-Metrics (Model ALR-30M).
Does anyone have any info on this ? I need to know what to do with
the BNC jack marked ..."Injection In"... . I expect it requires some
signal input, CW or Swept or ??

Thanks,

73, Dick, W1KSZ

Want to buy a manual for the AZDEN PCS4000 2 meter transceiver.
For some reason I cant retain the stored freqcys even though
I substituted the original tiny 3 volt battery thats supposed
to keep the memory channels alive.   I brought out the leads
(after severing the old battery) so can substitute nicads
or LION rechargeables externally but still cant figure out
why it will only hold the memories for maybe 1 or 2 days.

Did you try measuring the current drain on the battery?
Some of this old stuff was designed to be plugged into power all the time.

This fellow sells them for about $16.

 http://www.myradioroom.com/manualsales.html

However, the other poster makes a good point about measuring the draw.
I had an old KDK-???? of that vintage that lost its marbles after less
than a week without being powered up.  No problem in the car, but a
hassle in the house if I was gone a few days.

> 3. Most of the heavy smokers from 20 years ago, who were pushing their oxygen carts around 10 years ago, aren't there anymore.
>
> 4. A lot of people were looking for newer stuff.   Some "new technology" vendors could make a killing. The first that comes to my mind is MPEG FTA satellite TV. If someone had set up a demo outside, when would have been sold out. There needed to be seminars like there was in the past. ICOM is local, and while they had their normal nice booth, should have a D-Star traveling road show.
>
> 5. The crowd lines up about an hour before the opening, the line winds back and forth, and when the doors open, there is a mad rush from different parts of the line. They really need to set up "velvet ropes" to organize the line; one person saying "please stay in line" doesn't cut it.
>
> 6. The snack bar needs to improve.   People are often travelling several hours to attend and probably leaving early because they are hungry. They probably should be selling coffee and doughnuts to the people in line before the opening.

And, they had sold out of the good silver coax ends by the time I got around to that vendor :(

Hello,

can someone please send me a digital picture of the kenwood TS-940S
power amplifier board (the one under the rear cover on the left when
looking at the rear of the rig. I have one which seems very abused
and I don't see any diode in thermal contact with finals and drivers
so I was wondering if they have been removed perhaps.
The email address is valid of course.

Thanks in advance

Francesco IS0FKQ

Well I could'nt imagine that the On/Off switch must remain on all the
time.  If it was in a Vehicle instead of in my ham shack who would
want to leave the darned rig on all the time.   I use it in the
home shack, and all I did was substitute the tiny 3 v (rechargeable)
cell and gring the +/- leads out so could use Lithium Ion or other
longer lasting rechargeables.   You gave me an idea however so will
crank in 5 freqs and leave it on for a few days to see what hapens.
                     73's and tnx
                         Joe

Read it again. Plugged into power is not the same as having the on/off
switch on all the time.

FWIW, a typical car radio these days draws about 1/4 amp when the power
is off. Vendors will deny it, but get out your meter and measure the
current thru the power wire when the radio is off.
There's a second wire that keeps the memory alive when your
ignition switch cuts the main power. Learned this the hard way
when I hard-wired a modern car radio into a motorhome. Battery
went flat in a hurry.

Dear All,

My kenwood TL922 has developed a strange fault. When I switch it on (via an Ameritron Soft Start module) I get a negative reading on the Ig meter of -50mA and a positive reading of around +100mA on the Ip meter with no key down.

Keying the amp has no effect and the relay does not energise. I have checked the ALC and relay connectors and the coaxial cables

I've tried starting it directly bypassing the soft start box and this has made no difference.   Obviously I do not leave it on for more than a few seconds as there is clearly a fault. I have had the covers off and can see nothing untoward in terms of burnt components and there is no burning smell and the fuses don't blow. Also both valves (3-500zs) light up.

Any suggestions as to what may be up before a trip over to Castle, has anyone else seen similar

thanks

Jim G7NKS

Get the diagram out & fix it yourself.Why do so many people just send stuff
off.A 922 is not rocket stuff.
Keith.

Easy diagnosis: one of the two 3-500Z tubes has developed an internal grid-to-filament short (quite a common fault).

The short causes the tube filament to effectively stay at ground potential even during stand-by, and that is the reason why the tube conducts and the plate meter then shows some idling current.

The grid shows negative current because, due to the short, the positive DC voltage applied to the filament to keep the tubes interdict during stand.by founds a path to ground through the grid.

WARNING: you are running the risk to blow the service transformer (T2). This is a Kenwood design fault: when a grid-to-filament short occurs, the 80 Volt generated by T2 is shorted to ground. DO NOT SWITCH THE AMPLIFIER ON AGAIN until you have replaced the faulty tube.

Hello,
I got hold of an IC-SM5 Mike, that came with an IC-730. Unfortunately, it appears that the wiring of the mike got screwed up. Result is no output of the mike. It would be great, if somebody with access to this kind of mike, could make a photo of that wiring and possibly mail it to me. (Reply is working)

Any help is greatly appreciated.

Vy 73 de Bjoern, DH3BP

NB: I do have the schematics, but I can't work it out since the PCB looks totally different than the schematics in the manual.

Let's honor it for its historic value and the impact it had on our ancestors.
It was the world information highway for many many decades.
Let's keep the tradition as Amateur Radio operators do to this very day and will continue to do so for many years to come.

Before you bash the code, read URL:
http://www.unesco.org/courier/1999_08/uk/connex/txt1.htm

You don't have to learn it or like it or even pass an Amateur Radio exam requiring it, but all reasonable persons should respect it.

Your WWII Fathers and Grandfathers certainly did. As well as your WWI and Civil War ancestors. The passengers on the Titanic would have appreciated Maritime Laws concerning its mandatory use at sea.

And what does this have to do with amateur radio equipment?

There are now three newsgroups for this kind of stuff, .policy .misc and .moderated

Keep it in those ones.

This is just more proof that the problem wasn't just with the obvious posters, who spew the newsgroups with their corss-posted junk. People who should know better aren't keeping it contained either.

Don't forget, this newsgroup, rec.radio.amateur.equipment is for

discussing amateur radio equipment. It's not for discussing other
things and it's not for buying and selling said amateur radio equipment.

I would like to buy a Ten Tec Jupiter transceiver WITH the antenna
tuner. Also, a 708 or 709 mic for the rig.

If the price is right I would consider the Jupiter without the tuner.

Please contact me at: 73w7gsa@gmail.com

Thanks,

Bill

Bjoern -

Well you have the schematic. Do you think someone changed (replaced) the microphone pre-amp in the base of the microphone?

My club, the Roseland (NJ) ARC, has the original Yaesu FT-1000 as our HF station. Recently, the autotuner will not find a satisfactory SWR, and a suggestion was made to perform a reset. We do not have the

technical manual for this rig, so if anyone identify the keys to hold
on power-up to do a reset, it would be appreciated.

73, Dick, AB2SV

Hi Dick,
Have you tried looking for manuals on http://mods.dk? You may find what you
need there.
73,
Bryan WA7PRC

Hi,

I am selling my Kenwood TS-850S-AT.

$650.00 plus shipping. The radio is in excellent condition

To see pictures and the discription please click on:
http://marklinbuyer.googlepages.com/ts-850s

73s,

Bill

The link for the manual is for the FT1000MP , Dick wants a servicedoc of the
original FT1000 which is produced till 1995/96.(The best of the best)
Look at : http://foxtango.org/foxtango001.htm , you can join this club for
free when you go to their Yahoo-group.
When you joined them , you can get a password to acces their downloadsection
to get your FT1000 servicedoc.

Processor reset: hold SUB and ENT then hit the power switch. That will also clear all memories.

```

I asked about "good" receivers for broadcast radio a while back, and the GE Super Radio was highly recommended here and elsewhere. So, I got one for Christmas and it does seem to be good at pulling in and separating many stations. Thank you. However, there is one annoying problem: The indicator on the dial is "offset" by some distance. Since the printed frequency scale is non-linear, one can not simply remember a simple rule like "Station plus 500 kHz". The manual that came with the radio doesn't say anything, really; it's very short.

So, any ideas?

```

Dial inaccuracy is usually caused by poor tracking of the oscillator. Is the problem evident on both AM and FM? If so, both oscillators will have to be adjusted.
To set the oscillators, locate a moderate strength station towards the low end of the dial and then set the tuning dial to the setting that corresponds to the frequency of the station. Then slowly tune the oscillator coil until the station comes in strongly.
Do the same with a station near the high end of the dial, and adjust the oscillator trimmer capacitor.
Repeat until the dial tracks accurately.
You might have to tweak the RF stages, but the IF should be OK without adjustment. Adjust the coils on the low end, the trimmer caps on the high end.

If you're not handy with electronic equipment, it might be best if you let a friend who is handy do it for you.

That does sound rather daunting.  But thanks for the advice, and thanks to
the previous poster for pointing to the PDF of the manual.

Put a piece of markable tape under the actual dial, and then put markings
for the stations you regularly listen to.

Or if you are actually listening to distant stations (which may not
reliably be there) start working on calibrating that new "dial". Wait for
a station to ID, then look it up, and you'll find it's actual frequency. So
that takes out yet another point on the dial. Do this enough times, and
you'll have it all right.

This applies to a lot of radios, whether or not they have a serious problem.
A lot of low end analog radios have big spaces between the calibration marks,
so the dial isn't particularly helpful. But marking it as you desire (or
with that tape), you can tune to a given frequency so much faster. It's
easier to tune that boombox I have by looking at my bit of tape than trying
to read the original dial.

By chance would that be NEC CQ-110E
If so W7FG has the manual
http://www.w7fg.com/manuals.php?manufacturer=NEC&center=

Good Luck

Has anyone attempted repair of said YIG Ocsillator sealed assembly ("A6")?
in the HP 8558B Spectrum Analyser? If so, were you successful?

My copy is putting out -32dbm (spec is +15dbm); otherwise seems fine: sweeps
OK, freq is right on, etc.

I suspect the 3 transistor amplifier inside the sealed assy.

Any suggestions?

-georgeK KB1HFT

These are sealed, and even if you could open them,
you don't have the tools or parts to repair. Check
the power supplies and contacts on the bias board,
but this is a common failure mode (blown power amp).

                           Steve

The simplicity and directness of this approach has a certain appeal, aesthetically displeasing though it may be.

Does the tuning procedure described upthread improve reception? I.e., do I give up any of the capability of my superradio by leaving it as is and using a masking tape scale?

```

For Sale: Demo MFJ-403P Travel-Keyer in MINT condx. It's a full-featured CW keyer with a built-in Iambic paddle. Ultra-compact size perfect for traveling or for home use with QRP or "big" rigs. Thumb wheel control lets you adjust speed on-the-fly; 3 to 65 words-per-minute. Dot-dash weight is adjustable 25% to 75% . Sidetone w/

speaker. You can select fully automatic Iambic or semi-auto "bug" mode. Reverse paddle. RF proof. Positive keying output. Battery saver. Specifications: Voltage requirements: internal 9-volt transistor battery. Keyer speed: Typically 5 to 60 WPM. Sidetone level: 50-mW max., adjustable internal trimpot. Sidetone frequency: 727 Hz default, adjustable 300 to 1000 Hz. Keying limits: positive keying, 50 volts at 100 mA max. CW generation: Iambic A or B, Automatic or Semi-automatic. Memory: dot-dash memory. Weight: 50% default, adjustable 25 to 75 percent.

Photo is available at QTH.com. We can accept Visa, Mastercard and Paypal.

$80 new. My price ONLY $49.95 plus $5.95 shipping. First e-mail gets it! 73, Bill - WA8MEA - http://HamRadioFun.com

This is a unopened kit from RF Electronics, Maker of solid state amplifiers.Paid $50 asking $35 plus shipping.

Filter Specifications:

Cutoff frquencies: 2, 4, 7.3, 14.4, 30 Mhz

Operating range: 1.6-30 Mhz (for freqs. between bands select the next higher filter)

Band switching: 6 position rotary switch with bypass

Design type: low pass Pi 7 pole Chebyshev

3rd harmonic attentuation: 64dB+

5th harmonic attentuation: 83dB+

Maximum RF power: 1KW SSB, 1KW CW (50% duty cycle)

Impedance: 50 ohm

RF connection: SO-239

Dimensions: 3"H x 8"W x 6"D

Weight: 3 lbs.

No, if the procedure is done correctly and thoroughly, the performance should not be affected unless by virtue of component tolerance build-up, one of the tuned circuits just doesn't have the range it's supposed to have. The procedure given in the manual is pretty standard alignment technique for a superhet radio. Nothing unusual about it. If you have a signal generator that is pretty accurate on the frequency setting, the whole procedure shouldn't take more than ten minutes, including the time to open the radio. The signal generator will make the alignment possible even if there are no stations to use for alignment.

Another thought occurred to me... how is the dial pointer arranged in the radio? If it's on a string, like radios of days gone by, just move the location of the pointer on the string so its position agrees with the station frequencies. That would eliminate the need to realign the radio.
Cheers!!

Hi,

I have listed my TS-850S for sale on ebay.

Click on this link to see that listing and the pictures:
http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&ih=018&sspagename=STRK%3AMESE%3AIT&viewitem=&item=280092199988&rd=1&rd=1

At $675.00 is should sell very quichly.

Thanks,

Bill

If you have Microsoft Streets or AutoRoute, you have all you need for live APRS tracking. You can now take advantage of the superior maps that comes with it and use it with APRSPoint. We have update the installation process of APRSPoint so that it now supports Streets or AutoRoute. You can visit http://www.aprspoint.com for a free download and trial.

I for one welcome the Techs to 10M. You are probably too young to remember
that Amateurs once had 11M (now the CB Band) -- some say we lost it because
we didn't use it.

The same thing could happen if we don't use 10M (even at the bottom of the
solar cycle)

We need to encourage new folks and new licensee privileges to be welcome in
Amateur Radio. Your post doesn't help a bit.

Man, HRO and Icom sure are proud of their IF filters for the IC-706MKIIG
... average more than $100 for each filter.

Anyone know where I can get a 500-Hz CW filter and a 1.9-MHz SSB filter
for something approaching a reasonable price?

Are there any third-party manufacturers that make replacement filters that
are compatible with the Icom gold-and-platinum ones?

The code hating losers were too stupid and lazy to learn and use CW,
they're also probably going to be too stupid and lazy to solve TVI
and interference problems with their neigbhors. There will be more
amateur to amateur and amateur to non-amateur conflicts. Hams will look
bad and the FCC will regulate the service more because of all the retards
we let have HF privledges.   CQ Breaker, CQ Breaker.

Welcome to CB everybody.

You're in the wrong newsgroup, just like the posts about CW.

There is rec.radio.amateur.policy and rec.radio.amateur.misc to ask in, and of course now there's yet a third newsgroup for this stort of thing, rec.radio.amateur.misc

For most people, one newsgroup would be enough, but instead we have not two but three.

ANd that's still not good enough, people have to come to the "riff-raff" newsgroups to ask questions that belong in one of those three newsgroups. Yet the rest of the hierarchy would be in fine shape if they could just keep their junk contained in those two or three newsgroups.

Thanks for the lecture, but no help on my question

As for "Yet the rest of the hierarchy would
> be in fine shape if they could just keep their junk contained in
> those two or three newsgroups."
YEAH BUT THEY DON"T

I am neither for or against a moderated NG, just wanted to know if it is up
and running? Thought I'd take a look and see what's there.

Have you refreshed your list of newsgroups from your news provider? Depending on how your news reader works and how your news provider handles things, you might have to download their complete list of newsgroups. If it's still not there, you'll have to complain to your news provider and tell them to add the newsgroup.

> Anyone using it ?

Yes; there's currently traffic in the group.

FS Icom IC-PW1 Amplifier
HF/50 MHz All Band Amplifier.
This amp needs power supply.
Was sent to Icom and everything is fine except power supply.
Serial Number is above 1400
You can add an external power supply. Or fix the one in it.
All other componets are fine,Just the power supply.complete with
Owner's Manual and Schematics of the RF section and all cables are
included as supplied from ICOM.
Have the original box and remote head.
Best offer or trade. Ready to sell. Nice condition.
Open to all types of trades. Or as I said make offer.

I like to leave my Yaesu VX-7R turned on in the CD15A charging cradle. But after a number of hours, the display goes blank and the strobe indicator rapidly flashes blue. The unit appears dead until I lift it out of the cradle. Then everything is back to normal. Note that the "Automatic Power Off" feature is disabled. What gives?

Hello,

I am building the cable to hook up the 706MKIIG to the SG-237 smart tuner
SGC's instructions for the 230 say to use a 1000uf Cap + a 91k resistor is
this required for the SG-237 unit? or just the SG-230?

SGC's Documentation Below!

http://www.sgcworld.com/smartuneric706technote.html

http://www.sgcworld.com/Publications/Downloads/ic706connecting.pdf

I thought it was sold, guess I was wrong !! So here it is again.

No need to move two of them, so backup radio must go. FT-990DC, with 4
filters (2.4, 2.0, 0.5 and 0.25 KHz). ROM Version 1.20, Serial Number
2E14XXXX. Original Operating manual and power cord included. Radio is
in excellent condition. DC Model is a lot cooler in RTTY operation.
$750 if you come and get it (Lexington, MA). $825 shipped to Lower 48.

73, Dick, W1KSZ

Looking for a good used TS-B2000. It doesn't have to be perfect as it will reside under the back seat.

I am having a problem with being able to program a ht1000. the error message i keep getting is a trs error. i am using multiple revisions of the software. I am thinking it is a computer speed problem. Is there any way to slow the processor speed down on a compaq presario 1610? or maybe some other fix with the software?

Hard to say without knowing more about your setup. I will say that the HT1000, being part of the early 'Jedi' series portables, is very picky indeed about how it's programmed. I can at least provide a short checklist.

(1). Your computer should be "old and slow," preferably not faster than a 486/100, and should be booted under true MS-DOS 6.22.

(2). DO NOT, if you value your radio's codeplug, attempt to read or program it through the fake "DOS Window" provided by any late-issue (Windows 98 and up) Windows system.

(3). Your RIB should be either a genuine Motorola RLN4008 series, or one of the Sandy Ganz designs.

(4). Your programming cable should, again, be genuine Motorola, or a third-party copy that has been tested with another radio and known to work. Many of the so-called "RIBless" cables on Greed-bay are nothing that I would ever trust to program anything important to me.

Those are the basics. See http://www.batlabs.com for more handy hints, programming cable diagrams, etc.

If you get frustrated to the point that you want a second opinion, I can program and test your portable at my normal rates. See http://www.bluefeathertech.com/rf.html for details.

Happy tweaking.

Geez what a bunch of tossers you all are - you don't like someones postings so you try and get him evicted from the net, why not just use a kill file - you DONT have to read his posts/threads now do you ?

Why is it the net is getting populated by the biggest bunch of self absorbed little Hitlers ? You don't like someones posts so you bloody complain or mail bomb them - grow up you bunch of fucking sad gits !

Richard.

Fred Read (postmaster@foxhouse.demon.co.uk) wrote:

: He posts this drivel every week or so to a number of groups that
: I subscribe to and nothing seems to stop him. *ALL* of his posts
: are off topic and unwelcome to the groups he posts to.

: We have complained about him to his postmaster on at least four
: previous occasions and he still posts the same crap. As his SP
: seem unwilling, or unable, to do anything about him, we were
: windering if there was anything you could do?

If he is not actively using tactics to avoid or sabotage killfiles (posting from various systems, forging, massive crossposting to create cross-newsgroup flame wars) then it should be quite easy to killfile him.

It does seem that the frequency and the size of his posts are approaching net abuse. However, IMHO, they aren't quite there yet. If his postmaster were to act in this instance, it would raise troubling censorship issues.

My homebrew project is now on the air.  8000 modulated by a pair of
813's driven by the Ranger.

Those within range are invited to join the Noon Time Forum on 3875
weekdays at Noon, Chicago time.

Jack, I really enjoyed reading your writeup and looking at the photos.
You have a wonderful one-of-a-kind transmitter there. It looks great.
Hope to talk to you on the air one day. 73 de Randy, WB5KCM

Really nice, Jack. Did you use the Ranger audio system to
drive the 813s?

Such a project is never really "finished", because there are
always new ideas and parts to be tried out.

I cannot confirm this.  Maybe someone else can.  But leaving the rig
on while in the drop in charger isn't beneficial to the operation of
the rig, is it?  I've the VX2R and somewhere it mentions in charging
proceedure that the set should stay off until charge is complete.  The
charger is just that, a charger, not a power supply.  It could just be
the radio freaking out.  Just my thoughts, I could be wrong.

N2EY@AOL.COM wrote:

> Really nice, Jack. Did you use the Ranger audio system to
> drive the 813s?

Roger. I started a thread earlier on using 813's as triodes and it was like falling off a log. The modulator consists of a very small chassis with a fil trans, tube sockets and a meter. This sits next to the mod iron on a wood deck. I like the idea of the mod iron isolated from ground.

> Such a project is never really "finished", because there are
> always new ideas and parts to be tried out.

Roger again. I want to eliminate the Ranger for one thing starting with the audio. I bought a 4W audio pre-amp and when I get tired of playing with the new rig I want to see if this will drive the 813's. I need some ideas on interfacing the two... some sort of interstage audio transformer I suppose.

Then, a simple xtal controlled exciter would be fun.

No end is there?

JACK K9ACT

I have for sale like a new Yaesu FT-857D HF plus 6 and 2 and 440 Transceiver, used less than 20 hours, $585; Yaesu FC-40 Antenna Tuner, New in Box, never used, $210; and Kenwood TH-F6A Tri Band HT, 2/440/220, also hardly used, $255. All have original manuals, boxes, accessories that came with them new. Thanks, Charlie Hugg, K5MBX

I am looking for a power cord for a kenwood r-500. I don't know if anyone knows this or not, but N4XFH passed away over a year ago, and left me most of his old radios. I know some of you have done business with Bob in the passed. Well I also need a VS-1 synthesizer for this radio. I am a blind person and could use one of those. If you have such, e-mail back to this address. TNX from n4pge in Griffin, Georgia.

There is also a low power switch on one of the circuit boards. It switches it to a 50 watt output max. Might (a big might) be the problem. It's been a few years since I used an 890. I don't recall exactly what board it's on.

73,
Ed KA9EES

Version 4.1 improved on the basis of 4.0. Added show/hide track in
addition to track removal. Also, the color in which the mobile station
names are displayed can be customized. And you can set up a tactical
call sign, and choose to beacon it instead of youe regular call sign.
In filter settings, you can choose to accept stations in the track
list without manually adding them. This version has improved legacy
TNC support as well.

Thanks, Michael KF6ZDM

I have a Kenwood TH 27A that has a problem that I am trying to isolate. I have the operators manual and schematic bit I do not have the board layouts and parts placement.

Does anyone have the board layouts with parts placement that they can PDF.

Thanks

Thank you for your responses. These filters were definitely from the very early 70s or maybe mid- or late 70s. The guy who sold them to me at the swap meet mentioned that they may have come out of a Cubic or Astro rig of that era, but he wasn't sure and I just wondered if there was anybody here who might be sure of that.

Thanks again, you guys.

Al W6LX

The name of the filter manufacturer that you mentioned, that did sound like the company that made the Swan filters (Cubic and Astro came later in the seventies, but my hazy memory connects them all together so I think there is a connection). I remember ads (and a quick check didn't find one) of them touting a really good filter made by that company. But I'm pretty certain it was in the 5MHz range.

What does come to mind, maybe incorrectly, was that the Swan 250, the six metre SSB rig, had a 10.7MHz IF, but I can't be bothered to check that. I can't even remember why I would think that. But I can't see them going to 10.9MHz.

I'm with the others, 10.9MHz is most likely a scanner (and I too would say Regency). And if it's not that, then it's some non-amateur piece of equipment. Not everything has to be for ham radio rigs, and I have my share of oddball crystal filters that came from somewhere but couldn't have been ham rigs.

Load the inputs and outputs down to some extent, and then use a sweep generator to get a general idea of their bandwidth. If you're looking for SSB-width filters, then they aren't useful if they were for FM receivers.

Post the information printed on the filters, and maybe someone just happens to know.

Michael VE2BVW

Hi, Michael and others,

Ron W6ZI was kind enough to solve this mystery and respond with the
following:

"The 10.9MHz C-F Networks filters were used to replace the standard filter
in
the Swan 250. The 250 had a 10.7MHz I.F. so a bit of retuning was required.
The stock 250 filter was a 4 pole, 3KHz (more or less) B.W. while the C-F

was an 2.8KHz, 8 pole which provided a very noticable improvement. Hope this

helps."

Thanks, Ron.

Regards,

Al W6LX

I have only a 290R and a 790RII. It should have a button ?STEP? at front
panel for change step and 12,5 kHz works only at FM mode.

Regards,

Ralf

The following was just posted to Usenet by the news.announce.newgroups
moderator on behalf of the Big-8 Management Board:

http://www.big-8.org/dokuwiki/doku.php?id=nan:2007-02-13-
rec.radio.amateur.moderated-lcc

This is a Request for Discussion (RFD) and Last Call for Comments (LCC)
to create a new moderated discussion newsgroup for amateur radio on
Usenet. It has been relayed to rec.radio.amateur.antenna,
rec.radio.amateur.dx, rec.radio.amateur.equipment, and
rec.radio.amateur.homebrew, as announced in the RFD/LCC. Please
consider contributing your opinions regarding this newsgroup to
news.groups.proposals, where followups to this message have been set.

And for the third time, you still ignore part of the hierarchy.

While the first RFD ignored the hierarchy except for .misc and .policy, and the second RFD added .antennas and .dx, this third RFD long after the discussion started still ignores three of the newsgroups in the hierarchy:
  rec.radio.amateur.boatanchors
  rec.radio.amateur.digital.misc
  rec.radio.amateur.space

In the end, you can't speak for the hierarchy if you don't even know which newsgroups exist in the hierarchy. No wonder you have such disregard for the hierarchy, you only think of yourself as some "administrator" type rather than a participant.

You aren't building bridges, you're imposing your vision on the hierarchy. The fact that you still don't come to the hierarchy and simply talk to us, isntead hiding behind the structure of creating a new newsgroup, says everything about your relationship to newsgroups.

IN the end, I conclude that you like moderated newsgroups because Usenet never sat well with you, and the only way you can deal with it is impose your need for rules on something that is a haven from that.

Ultimately, you are like the problem posters. Neither of you can live without rules, though you need them because you can't tolerate the lack of rules, while they need them because they think the lack of rules is license to do as they please.

You've spent the decade trying to impose rules on the hierarchy, while the rest of us were actually trying to make the hierarchy good by participating in the discussions.

Useless administrators are always trumped by people doing things.

Its me speedster2006 I had to change my Ebay name because ebay threaten
to ban me for good this time.
You know i sell alot of 10 meter radios for 11 meter use.

I put the Ebay name in my wifes name safire2007  for this auction

I have a MTS2000 (48 Ch. VHF) that I purchased off ebay last fall. I
recently had it programmed and it worked fine for a day, but now it
displays "F001" when it turns on. I read somewhere that this error
code means the synthesizer is out of lock.

Can someone please tell me what this means, and what it takes to get
it fixed?

Also, when it worked for that one day, I noticed the three buttons on
the side all did the same function, even though I watched the tech
program each button to do something different (backlight, scan on/off,
unprogrammed). Is this a related issue?

Any help at all anyone can provide will be appreciated! Thank You!!

"Scramble" rules out amateur radio.  You might be able to use MURS, I
suppose, but I don't know of any MURS radios with scramblers.

Hi,

This is my first posting to the Group !

I have just purchased a Ten Tec Scout 555 from another radio amateur.
```

Unfortunately he has lost the power lead. Can anyone tell me what type of power plug I need, I am in the UK so any suggestions on where I might locate such a plug in the UK would be helpful. I have the Ten Tec part number from the manual but want to avoid shipping costs across the Atlantic if it all possible ! It may be that it's a standard generic two pin connector, but I don't recognise it.

Thank you in advance for any help.

73 de John

If you subscribe to QST you can access their back reviews in the
members portion of the ARRL website. Otherwise you can order reprints
of articles from qst/arrl at their website for a modest fee.

I have a new Hammarlund variable capacitor for sale, model MC-325-M is the model. This is NOS and NIB and has been sitting on a shelf for many years. $30 plus whatever shipping is.

I have the following old repair parts for sale as a lot or each. These are all NOS and NIB as far as I can tell. Let me know what you are interested in and make an offer. Buyer pays shipping of course.

General Radio Parts   846AK Variable Caps 2-11uuf , 846BK 2.5-20uuf , 119-A Choke .25H , 301 Potentiometer 200 Ohms

UTC Parts   Variable Inductors VIC 7 .13 H , VIC 14 3.4H , VIC 18 21H , VIC 21 83H
Peterson Radio Crystals   Z-1 Type 5000 , 2500 , 1000 , 500

Hammond Choke 1506 1.6mH

Meissner Parts   19-6842 RF Choke 30 mH , 19-4551 RF Choke 5.5 mH , 19-6846 RF Choke 80 mH , 16-6668 LF Input , 16-6658 Input IF 454Kc

Miller Parts 4525 High V RF Transformer , 6203 4.5Mc IF Input and Interstage , 6204 4.5Mc IF Discriminator , 6205 4.5Mc IF Ratio Detector

5480-C 455Kc Oscillator , 6320 .2-3 mH tapped , 6196-TV Hor Width Cont 55 Sweep , 6195-TV Hor Lin Cont 55 Sweep

I can provide pictures if you would like. Shipping costs are actual shipping costs, no handling charges. Please quote prices in US dollars. I really prefer Paypal but other arrangements can be made.

Thanks

Dave

Any U.S. public library should be capable of getting it -- through
inter-library loan if need be.

Bob,

Thank you very much, that looks just right.

73 John

Call To Arms, means, you will inspect your weaponry and prepare to do battle. Duty Stations, means, all men and women must assume their duty stations, weapons at the ready. Fire When Ready, means, man or woman your weapons, sight the target, finger the trigger, and fire when ready. Cease Fire Procola, means, continue fireing until the enemy targets are dispatched, and there is no sight of an enemy anywhere on the horizon. Procolas means, after ending all possiblities of any lingering survivors staying alive. It means to wipe them out, and leave no survivors.

This means, it is time to kill all Lesbianists, and all other enemies in my universe, the many groups of naughty kids in my universe, rascaleers and others, and we will continue this fight, untill they are all dead, and in my Epcot Centers, or untill they have surrendered. Rascaleers are evil people who wish only to harm others.

Religious Practices

This is a little confusing, but hold on, and I'll try to explain it. There are many parts to my religion. We call them, parts, but we can also call them, practices, some of them, but not all of them.

We have the fundamental 'root' practice, which is sexaling. From the root practice, comes all other practices.

There are side practices, and there are derived practices. There are also, accompanying practices. There are many other types of practices, but I don't remember the names for them all, right now, as I'm still amnesiatic, and will be for a long time.

Fistiker Practice

Bringing about orgasming in another person is a fistiker practice. A fistiker practice is a side practice, but it is also something a little different from a side practice, depending on how you bring the orgasming about, and depending on how many people are involved, and depending on who is the primary person, the person whom we are working on, and who are the helping people, the people who are joined together, to help the primary person to orgasm. There are a number of other dependencies as well.

What Is A Dependency?

A dependency is some thing that is needed that will help to define something else.

As in the case of an accident victim, we have a crutch to define one level of severity of an accident victim's situation. But we might also have a wheel chair to define another level of severity for the same, or other, accident victim. These objects help to determine how badly or miserably a person is injured.

A crutch can help define a level of severity in the injury. A wheel chair can help also to define a higher level of severity. These are both dependencies. They help us to define something, and they are used to help us to define an accident victim's level of severe injuries.

When Sexaling

You can use your lips, for example, or your tounge to twiddle the toes of a woman, and the woman begins to orgasm. That twiddleing of your tounge on her toes to help her to erotem, and to experience erotistical orgasming, can be any number of things, depending on the involvement and complexities of dependencies.

Rubbing the vaginal face, the vaginal wall, or rubbing to either side of the vaginal crevice, the labial folds or felates, can help a woman to erotem and erotistically orgasm, and depending on the involvement and complexities of dependencies, the dependencies can be any number of things, if we try to define the sexaling activity more fully and completely.

We'll skip this for now, as it is a little too difficult to remember, right now. Just remember, the primary practice is sexaling, and that sexaling is like the roots of a tree. All other religious practices grow out of the 'roots' of the tree, sexaling, and can be defined in many different ways, such as a helping practice, a side practice, a subsidiary practice, a canceling out practice, an accompanying practice, and there are many many other terms for what kind of practice some thing is, depending on what dependencies are involved.

Labia And Felate

What is the difference between a felate and a labia?

A felate is the skin tissue of the outer surface, and some of the tissue of the tips and edges of the labia. It does not include the inner side of the labia, but only the outer side, and the surrounding edges, as far as I can remember.

A verb, or action word, as I call it, is 'felate' as in 'Felate that woman's or girls' left felate'. That means to suckle on the left felate of the woman or girl.

Felate is a verb, but it is also a 'nominal' word, or naming word for objectifying an object.

Do we say 'Labialize that woman's felate!' To labialize something is to make something into a labia. We wouldn't, unless we were a doctor, say that about a felate. But we might say it if we were doctors, and we had a woman who met with a bear, and the bare clawed at her genitals, and the sharp claws ripped her labial skin up, then we might say in a surgeon's room 'Labialize that woman's ripped up labia.' That would mean to stitch it up, and make it nice and neat, and clean and well stitched up, and then useful to her, again, and it would involve a lot of surgery, as many nerves would need to be connected, as they had been ripped apart, and the wiring was all dislocated. But in the end, we would be able to fix her labia, and her genitals, if they were also hurt, and then we could dismiss the patient from the hospital, after the labia healed, and after she recovered from her trauma of having her labia shredded by an impolite, rude, mean, uncaring, and hungry bear.

Genitals, Titties, The Labia, And The Many Sexaling Organs

The labia is not the genitals, but some people do consider them as a part of the genitals. The genitals are inside the woman's vagina, in my way of thinking. The vaginal wall is not part of the genitals. The vaginal orifice is part of the genitals of a woman. This seems odd, doesn't it. Well, that is how it works, in my brain, and I designed women, as well as men. If you notice, in my writings, I've talked about the draft table, and the throttle. These are major parts of a woman's genitals. They are inside the vagina, and you can reach them through the vaginal orifice. Before you get inside of the vaginal orifice, there are a few things outside, such as a pee tube, and an ejaculate tube, and the clitoris, as well as the labia. These are not part of the genitals, but are working parts of her sexaling organs. A woman's or girls' sexaling organs are not equal to her genitals. Genitals are for baby making, and for other purposes. Titties are not part of the genitals, but they are part of the womans' sexaling organs. This will require a long discussion to clear up, so I will save it for another day.

Bears In The Woods

That's the way it happens some times, when women or girls go out into the woods, and sexal with their female friends. They can get hurt by bears, if they are not accompanied by men, who are tough, and strong, and who stay alert, to guard and watch out for dangerous animals, such as bears, wolves, cayotes, bobcats, puma, and even racoons. Racoons do attack humans, if they smell some thing that will taste good to the racoon. If a person has a skin tear, and is bleeding, even a tiny bit, the racoon will smell it, and come running, and then find the person, and so will panthers, and all kinds of animals will come, and it's just like a bunch of sharks and fishes of different kinds, and Moray Eels, they like the smell of blood, and they come and investigate, when they smell it.

Women and girls have periods, and it is not every twenty eight days, as I've explained about before, and blood runs down, out of their vagina, and they generally do not know it, as it is only a tiny drop of blood, or less, most of the time, and the blood is often wiped from the skin surface, when the woman or girl is on the potty, or toilet, and the woman or girl will not even see the tiny drop of blood that comes out of the vagina and drips down the labia, on the inside, and then falls or dribbles down to the felates, and then falls off the felates, while she is on the toilet into the toilet, or while she is out doors, and walking about, onto the earth, if the woman is walking on a park walkway, or bicycle path. If she is wearing underwear, it will not fall onto the earth, but it will dry up on the panties, or underwear, and the smell of the dried blood will attract wild animals if she is out doors, walking or jogging in a wooded or regional or rural area, where there are lots of, or even just a few, animals.

Pumas can smell the blood, from miles away, and so can tiny oselots, and bears, and many animals can. They can smell blood, because they know they need meat to survive. That is built into their brains, that are located throughout their bodies, and not only in the skull, and animals are very sensitive to the smell of blood, as well as to the smell of urine, and to the smell of poop. Some animals, such as racoons, will come up from behind a woman, and grasp at her panties, as the racoon may smell the odors of fecal matter, from her butthole. Men may be raked by the claws of raccoons from behind, as they smell the odors of fecal matter, and try to find out more about it, as the racoons know that there is something delicious hiding behind those odors from the buttholes of women, girls, men, and boys.

Expecate

When women and girls go out hiking, it is best to wash out the vagina, first, and then use a fermented oil, as a douching agent. The oil will help to slow the flow of the blood down the inner walls of the vagina, and it may help to trap the blood, and make it difficult for it to leak out, unless the amount of the flow of blood, is very large. In that case, it is best to stay home, and not go out, when a large amount of blood is expecated from the vagina. Expecated means to expell outwardsly. Expectate can also be used, as it is generally the same word, that is, and it also has generally the same meaning, but perhaps it has a few more uses, maybe, but it is from a variant language of the English language, and is basically the same word.

You should expecate your fluids in your vagina, from your vagina, before you go out hiking. If you know when your period is, and there are ways to tell when you have a period, or when you know when you are about to have a period, than if you normally have a large amount of blood flow from your vagina, as that has been your experience, it is probably best to go and sunbath at the beach, far away from wild animals and their habitats, or by the pool side. Racoons sometimes come out of the woods, to the shores of beaches, and trumbel along, listening and watching, and sniffing the air, when they smell dried blood, or wet or moiste blood, inside of the swim suit lining in the groinal area.

How Do You Tell When Your Period Is?

To learn when your period is, you need to look into the toilet bowl that you pee into, and then see if there is any red droplets. You can place a piece of toilet paper onto the surface of the water, and it might help to show the redish color mixing with the urine.

Another way is to take a piece of toilet tissue paper, and wipe your felates, in the morning, or during the day, or at night. Night is a good time, but during the day, it is just as good. Some women like night time because they feel the day is finished, and they are now going to make a final check. Well, it doesn't always happen the way we want things to happen. You might start leaking blood fluids, at two or three or four or five, a.m., or at six, or seven, or eight, or while you are in the shower, or in the bath tub, bathing, before you plan to go out for the day.

It may take you several years for you to find out when your period begins, and when it ends, by checking for blood flow. When you have determined the number of days between one period and the next, and you are absolutely certain of it, and you have confirmed it, many times, and you have checked to see if there might be something you didn't notice, at other times, when you checked, eventually, you'll learn when your blood flow begins, and how long it lasts, and when the next blood flow begins. Once you know, then you can time your excursions to the woods, or to the beach, with your friends, both women and men.

Bears, Wild Animals, And People

Men are needed to help scare bears away, if they come to close, and pepper spray is a good way to get them to leave the area. Bears do not like the small of pepper spray, and you need a cannister of pepper spray that will fire fifty to eighty to one hundred and eighty five feet or more, to scare away a bear, safely.

Loud noises surprise bears, but hungry bears get angry and feel challenged by you, and may come at you at a fast pace, and not stop, once they are angered. If you are a good shot with a rifle, and you see a bear, from a few hundred feet away, and it is moving slowly, towards you, following you, you can shoot it with a good fifty calibur weapon, from that distance, and it will go down, in an instant, if you hit it square in the noggin, about one inch or less above the nose.

You need to be a good shot, and several people should aim, and fire at the same time, to kill the bear, to be sure some one hits it, and then puts it down, and kills it.

Do not think that because you have one rifle, or two handguns, and a rifle, that you are safe. If you do not know how to shoot, and if you are an inexperienced marks woman, or marks man, than your chances of hitting the bear are near zero, for all three of you, at three hundred feed.

You need years of practice to become a good marksmen, and you can start with the lower calbur weapons, to get a feel for weapons that fire projectiles, and that make loud noises.

There is no such thing as a friendly bear, and people think, 'Oh, look! Isn't she cute, that bear.' If they think that way, they might as well have left their last will and testament behind, and signed all their assets over to another person.

Bears are animals that need to eat just as humans do, and just as all animals do. If you are so foolish to think that bears are cute, you are a lame brained idiot. Bears are dangerous animals. And so are all wild animals. If you think a racoon is a cute animal, you get the lame brained award for the year award, and trophy to sit on your desk at home to remind you of how stupid you are.

Brad Pitt, And Angelina Joline

Only idiots would think that wild animals, that eat people, are cute. They need remedial training, as they do not understand that their lives are in danger, every time they walk out the door of their home. Even in the cities, there are nasty people, who smile, and pretend they are your friends, and these same people, such as Hillary Clinton, Brad Pitt, Cheryl Davis, a friend of Brad's, but that's his current girl friend, Angelina Jo-line. She is not a Lesbianist, and Brad pretends to be her friend. He likes to watch her get eaten by bears, my abominant kids, when the Lesbianists feed humans, one at a time, to the bears, or to the crocodile abominant children of mine.

Abominant Elephant Kids

I have carniovorus, human being abominant elephant kids, and they are rude, mean, nasty, and really terrible. They scare people, and then they pick them up with their trunk, and place them on their head, and then they tell them not to move, or they will stample on them, or tromp downwards, and crunch them, painfully, from the foot, to the shin, to the thigh, to the pelvis, to the waiste, to the lower tummy, to the mid section, to the chest, and then the neck, and then the head, finally killing them. They will take a person, pull the person up and lift him or her up into the air with his or her trunk, and then pull the person into his or her mouth, and then crumple up the person, and then spit the person out, and the person is all broken up, and chewed up, with all the bones, broken, in the legs, and in the arms, and in the waiste, pelvis, torso, neck and shoulders, and head.

The Lesbianists use lots of these elephants. They are pretty to look at, but they are mean, and nasty. When strangers see them, they think, 'Oh, what a pretty elephant.' They don't know that the elephant is my abominant kid, and can speak English, as many people recently found out near Africa, in Sri Lanka, and then also in New Guinea.

They were very surprised at the talking elephant. But they didn't know that the Lesbianists had let the Elephant, my abominant kid, lose from the cages that they kept him sealed up in. There were one or two, or maybe eight of them, in Sri Lanka, and eight or nine in New Guinea. Lots of people got eaten up, and killed. The elephants are still lose in New Guinea, but in Sri Lanka, they herded them into the pens, and brought them to New Delhi, to then begin a rampage in New Delhi.

Well, the Lesbianists are doing this, daily, because they feel they have lost this battle, and that they are just wasting time, doing nothing, as they can not get to me. So they want to have a lot of fun. Now they are releasing lots of my abominant kids, in many places, and in New Delhi, Bombay, Sri Lanka, and New Guinea, many people have been hurt and killed by these idiot kids, these abominant elephant kids of mine. The Lesbianists have thousands of animals they want to release, out into the public, in England, in Switzerland, Georgia, South Carolina, Paris, and many other places.

The Lesbianists think they are going to have a lot of laughs watching the abomniant kids of mine, tear people up, and rip them to shreds. They also think that the animals, who are not abominant kids, but are just bizarre animals, that catch people in very large, nets, that have threads as thick as ropes, and that are very sticky, are going to do a lot of wierd and crazy things, no one here on this planet, other than them, have seen. They think they are going to get a lot of laughs when they see the mayhem and havoc, the disruption to society, and frustration on the faces of people who get caught in the nets, and then turned into living mummies sealed up in a type of pulpyish paper so the person can slowly disolve, but stay alive, for up to a year or more. Maybe as long as ten to thirty years, in some cases, and I'm not kidding.

You may think I'm kidding, but I'm not. This began a few days ago, and the Lesbianists are intent on continuing this, for the next few years. Isn't that surprising. I never expected that. They are very strange people, aren't they. They are real sicko's aren't they.

I think you should all go and meet my kids, with a day pass, and ask them about it. Other wise, you might find your self in a very large spider's web.

Labiating A Labia

To labiate is to suckle the labia, and to take one or the other of the labia into the mouth, and tickle it with the tounge, or twist it gently with the lips.

'Labiate that woman's left labia!' 'Felate that womans left felate!' The difference is, labiating is to suckle the entire left labia, inside or under the edge of it, on the inner side, and the edge of it, and the outside of it.

Felateing the felate, is to suckle the edge of the labia, the upper exposed edge. It does not include the labia, in its entirety. Only the upper, protruding skywards, or in which ever direction it is pointing, that portion of it that is extending outwards. If you lift it up between your finger tips, you'll pull up on the entire structure revealing the underside, or the unexposed underside of the labia. There is also the outer side of the labia.

The Felate is the top tip edge of the labia, generally speaking, and it is itself an isolated system, and not part of the labia. It's connected to the labia, but it serves a different function. It droops downwards, to seal out the possiblity of any thing entering the vagina from below, in an upwards moving manner. Bugs can not fly up into the vagina, as the felates prevent them from flying up into it. Without the felates, the vagina would be unprotected. The labia would not protect the vagina, as the labia is merely the skin tissue mass that the felates are attached to, and in an instance of removing a felate from a cadaver, or dead body of a woman, or girl, once the felate is removed, the labia have no closure over the vagina, in most women and girls.

There are exceptions, as we've had many animals in our heritage line. There are many differences when we line up ten women, and inspect their vagina, their felates, and labia, their bumbey pack, as children are encouraged to call the lower hanging sexual organ of the vaginal cape, as it is also called by doctors.

On this planet, the bumbey pack may not be called a vaginal cape, with the inferior texts with unadvanced, primitive, witch doctor level sexual sciences that do not help any one along, such we find with the myth that women and girls have a period every twenty eight days.

That is total nonsense, as I've explained about it, before. The truth is, every few days, to every eight to fifteen days, to even eighteen days, or evern thirty two or fifty five days, depending on where the woman has grown up and where her ancestors have grown up, the number of days between one period and another period can be very dissimilar, from one woman to another woman. Some women have a period every two or three days, or even every day. There is no reason an ovary can not fall, every day, several times a day.

An ovary is so small, no one can see it, without special optical technologies, such as pass through see through technologies, and other optics, and other videoing technologies. A microscope is an out moded, ancient, and novel device, fit for only museum use on display shelfs. It's like an old car of the twenties, or there abouts, or even earlier, of course, depending on how sophisticated it gets. Micron microscopes, the so called, 'electron' microscopes, are a misnomer to begin with, as an 'electron' is not a fictious concept, but no one knows what an electron is, generally speaking except for the Lesbinists.

An electron is a small bit of electrically heated plasma, that you can heat, with the right technologies. It can fit on the tip of a pencil or pen. This is a big joke to the Lesbianists, as are also their jokes about protons, and neutrons, and nuclei, or the so called combined nucleus, as in 'nuclear' family. Nuclear family, is not a 'tight' organization of two persons, and their children.

A nuclear family is a family that has been nuclearized, that is, exposed to radiological salts kiddies, and their radiative or radiological energies. That's another one of the Lesbianists' jokes on all of the scientists who the Lesbianists could get to swallow it.

What Causes A So-Called "Nuclear' Explosion Or Detonation?

A vast number of children are making babies at a very high rate of speed, and the energies that they give off, as they make babies, and then peel off from the area where they made their babies, one after another, as they rocket away, is what causes a nuclear blast. The tummy mommies and tummy daddies are making babies at such a frantic pace, they make millions and billions, and trillions, and more, before you can even send a signal to your eye lid to blink, from your brain part that sends the signal out. The signal will travel just a very short distance across a crupture, not even half way, more like, one or two feet in distance, if we are to look at the size of a crupture as the same size as our current universe. It travels about not even one foot, not even one inch, and not even one millimeter, and not even one millionth of a millimeter, and far smaller than that still, before the parents are already through making babies, and they have retired, and passed on, and several kabillion generations of families, and multiply that by a very large number, and you'll get how many generations of families lived and died, and passed on their DNA to their sons and daughters.

It's a hail storm of erupting magnitude when the tummy mommies and tummy daddies begin making babies, and making their families larger.

It all happens so rapidly, with more than that number of successive generations of families, in less time than the energy pulse will travel down an optic nerve, across a crupture, that very minute or very tiny distance, as I stated above.

That kind of frenetic baby making activity, makes for a lot of heat, as well as, it generates a lot of stresses, and a lot of energies go flying off in all directions, as the sexaling couples experience many nice orgasms and eroticisims, together.

Temperatures, their body temperatures, collectively, and the incredibly vast number of movements, which also generate temperatures, by the animals, the tummy mommies, tummy daddies, tummy babies, the relatives, and the many generations of families, go skyrocketing, and the magnitude of numbers, and the intensity of all the activities the animals are busy with, as they make tummy babies, simultaneously, or nearly simultaneously, is of phenomenal proportions.

If we slow them down, to our pace, and then compare them to our pace of life, they would be just like us, and things would move slowly for them, and not much would change, for many kazillions plus years, and then many, many more years.

However, they are moving so much faster than we are, and the length of time they live, to them, it is a long time, four or five, or eight or nine hundred years, in our time, maybe, in some cases, depending on the type of radiological salts kiddies making babies.

On their scale or pace of life, they live that long. But on our scale, the length of time they live, is so tiny, we can not measure it, unless we have a very high level of advanced mathmatics that can account for such a small time period, or span of life.

Anyway, the frenetic adventures of the colony of radiological animals, when they start to make babies, after they are woken up, and prompted to make babies, with a detonating surge of heat energies, light wave energies, pressures energies, trampolining energies, which get them started, with the right combination, of heat, light, atmospheric temperatures, atmospheric pressures, food sources avaiability, drinking water avaiablity, trampolining energies, and a number of other types of energies, that awaken them, and then get them turned on, and sexaly active, they will suddenly erupt into a frenetic, mass of baby making furor, to us, any way, and with that, we have our so called, 'nuclear' detonation.

Cleansing Your Self With Your 'Built-In' And 'Attached', Cleansing And Washing, Clearifying And Erasing Energies Producing Genitals And Sexaling Systems, Eroteming And Orgasming Nervous Systems, And Baby Making Related Purifying Energies Generation Stations Aparati, Or Apparatuses, And Armatures

You women and girls, your vagina is your Holy instrument for assisting you to cleanse your self, and wash away the dirt and grime of daily living, the insults to you from strangers, the verbal abuse you experience in your arguments and conversations with friends and family, neighbors, relatives, work associates, and community acquaintances.

Your Holy body is a weapon to fight back against all the negativities you experience in your life, as you orgasm and erotem, showering off purifying energies, and lots of other beautiful other things and dings, as you vibrate your entire body concordially, in harmonic rythym, cadence, and rapture, with my Holy Body.

Your breasts, your butty butt, your butty butt hole, your vaginal hole, your groin, your throes, your vaginal cleavage or labial folds as they are called here by these nitwittish doctors on this planet, who do not know any thing about the human body, your chest, your back, your legs, your arms, your hands and fingers, your ankles, feet, and toes, your ears, lips, mouth, tounge, cheek, your rectal cavity, your tummy button, your stomach, throat, your brains, and you have many more than just one in your body, but many millions and more of them in your body, and that is not an overstatement, and every part of your body, inside and out, your many nervous systems and all your organs, they are all set to orgasm and erotem, and generate purifying energies with the help of the power company, as I've explained about them, before.

Ticklement Tuning Forks

You have ticklements, tuners, or pitch fork tuning forks, that chime, in every cubic millimeter to every cubic inch, and in even tinier places, you have tinier ticklements, or tuning forks, and in larger areas, you have larger ticklements, or tuning forks, and they are all set to vibrate in various patterns of sexual thrilling eroticisms, and orgasming ecstacies, as you pump up the levels of sexalating energies you have available to you, in you, and showering off from you, and those patterns and focal points change, slightly, minutely, as every micro second goes by, as we change our location in our universe, and our relative location or position to every thing else in our universe changes, from night to day, and from day to night, ongoingly, non-stopingly, never repeating the same set of tuning focal patterns. Focal patterns are frequencies.

Focal Patterns

These frequencies, or harmonic consistencies, are harmonic displays or the 'in rythm' with GOD, consistencies that allow you to be united with GOD, me, my devine and holy body, and my devine and holy mind, and being or GOD SELF and GOD BEING, every moment.

Men and boys have the same ticklements, or tuning forks, and they are located in every organ of their bodies, just as they are in women's bodies and in girls' bodies, and they allow all of you children of mine to stay in frequency with me, as you sexalate, erotem, and orgasm, practicing my religion, and as you live your daily lives.

These many ticklements and tuning forks are all connected to your brains and to your nervous systems, and each living being in your body, has them as well, and every living being has them as well.

All my children, animals, living beings, and human beings, are all connected to me, through these tuning forks, and also, through the holy bodies all my children have inside of them, and also through a myriad of other mechanisms that I have functioning in your bodies, in your astral 'energy' bodies, and the many millions of energies bodies each of you have in you. My animals children and living beings childrens have fewer connectivities and fewer energies bodies, as they do not need as many as my human being daughters and sons. This is because you, my human being children, need to be more connected to me, as you are the only ones who can actively practice my religion, with your own self determination, and desire to practice, to become closer to me, GOD, purer, and holyer.

I'm connected to all of you, day and night, three hundred sixty five days a year, in countless many fold untold numbers of ways and manners, and with countless many fold untold numbers of mechanisms. All of my children are likewise connected to me, in similar ways and manners, and with similar mechanisms.

As you women, girls, men, and boys sexually rapture, erotem, orgasm, and reach sexual peaks, and then sustain them, you grow holyer, as you become purer, brillianter, and closer in GODLYNESS to ME, GOD.

Obviously, then, the primary means for you to grow pure and holy is to sexalate, and as you continue, over the days, and weeks, then months, years, decades, hundreds of years, thousands of years, millions of years, and more, you slowly grow more pure and holy.

Sexaling is my primary and most fundamental religious practice and your primary religious practice for you to become cleansing machines, washing machines, purifying and sanitizing machines, so that you can clearify and erase your karmic markups, and purify your lives, and the lives of those around you, with your selfless actions of grace and serenity, sexaling and showering purifying energies in all directions for the sake of your self, and for the sake of others.

You women and girls need men and boys to assist you to become the powerful cleansing and purifying machines that you are capable of becoming.

Men and boys used to be somewhat nearly as useful as purifying and cleansing machines, as women and girls, but men and boys have different jobs, and different priorities, and there fore, the burden of work to purify my universe, and to clearify the karmic markups of all my children rests on the shoulders of all women and girls, with men and boys assisting women and girls.

You men and boys need women and girls to lead you, and to help you to become more proficient, powerful, and more capable cleansing, washing, purifying, and sanitizing machines.

Assistive Religious Practices

The practice of praying Nam Myeo Ho Ren Ge Kyeo is an assistive practice that allows you to become in touch with my GOD SELF, equally as well, but the time it takes, is much longer, as very little purifying energies are produced, merely by using your brain, muscles, ligaments, sinews, bones, mouths, tounges, and jaws, as energies sources.

There are many other assistive practices, from meditation, to breathing techniques, to yogic techniques, to ballet like techniques, to dance techniques, to body movements of various kinds, to help you to increase and or also store up your energies, and then for you to release them, for you to then become more firmly and closely connected to ME so that you can eventually begin to gain a higher appreciation of ME, GOD.

My many religions teach many ways to do this, and before my many religions were corrupted by the Lesbianists, they worked to varying degrees of success.

Therefore, sexaling is the primary fundamental religious practice, and all other practices in my religions that I've taught over time, spanning all of my previous teachings from the begining of our time together, since I, my GOD SELF, created you as my children, are assistive practices, of one kind or another.

Sexaling, eroteming, orgasming, phlumetting are important practices, and as you orgasm, you are purifying your self, and others by pushing out and spraying your self with purifying energies as your holy and sacred energies shoot out to cover you and emmerse you in full body coverage, from head to toe, showering and shattering energies every where around you. They then build up and cover over all others who are around you, as well, with your purifying erototistic and orgasotistic purifying energies, clearifying yours and their karmic markups.

Astral traveling is another type of practice, but we'll define it, another time. Experiencing hyper trance states of mind and being, and a nearness to GODLYNESS are also a practice, and we'll define it, when I can remember every thing I need to remember about it.

Participating in my religious ceremonies is an assistive religious practice you can enjoy, as you become purer and holyer, and after you recognize that I am your Mother and Father, and your CREATOR, and that you exist because of me, as I made you from pieces and parts of me, your CREATOR.

After you realize this, you can enjoy participation in ceremonies with me, as training priestesses and priests, and you can make your way up the purity ladder, the more you participate with me, GOD, in my religious prayer hand signaling ceremonies.

Praying Nam Myeo Ho Ren Ge Kyeo to my Holy Body, or to the Gurkian Mandala, as I've explained about, is an assistive practice that will bring results.

It will not bring results as well and as effectively and as quickly, as sexaling, which is the most holy and virtuous practice, along with eroteming, orgasming, phlumetting, astral traveling, peaking, and so on.

I've spoken about peaking, before, and women and girls can peak, and experience wonderful feelings.

In any case, do not confuse assistive practices, with the fundamental and primary practice of sexaling. We'll get back to all those other things, to define them, betterly, another time, after my brain heals, a little bit more, and after I erase more karmic markups that keep my brain karma from improving, fast enough for me.

How To Make Prayer Statements

Remember to include a prayer statement, such as 'I pray to the holy ephemeral body of the Creator, John Francis Ayres, for the [insert private prayer statement]', such as, '... for the serenity of mind, and the gratefulness of heart, for all those around me, who have helped me to become the person I am, and can become.' or, '... for the peace of mind, and serenity of heart, for the love of all men and boys, and the cooperation of all women and girls.' These prayers said by a woman or girl. Men can pray, similarly, '... for the grace and deviness of the women and girls who surround me, I am greatful to them, and I pray for their continued good health, and prosperity'.

You can also say, 'I pray to the holy body of the Creator, John Francis Ayres, for the [insert private prayer statement]', but only when I am in the middle of a religious hand signaling prayer ceremony, i.e., while I am doing a prayer ceremony, and saying my prayers with religious holy hand prayer signals that my special kids who are religious kids, can pick up and then act on, in concert with other groups of kids of mine, who also are religious kids, most of them, I think, and who work together with my primary groups of religious kids.

I have lots of kids, and some are normal kids, who go about their jobs, as expected, for earnings, just as most people we know. But I also have lots of other groups of children, who are more, religiously oriented, to varying degrees, and who are very religious as their work is all for the sake of my religious self, my GOD SELF. My religous kids catch my hand signing, and then they pass the messages along to others of my groups of children, and with all of the different groups of children I have doing 'good' works for me, as well as groups of children who do 'religious' works for me, as well as groups of children doing normal work for me, but for the sake of my religion, nevertheless.

They all coordinate themselves, somehow, I have yet to figure out how they do it, but between them all, they get the jobs done, that I ask them to do, while I am religiously - and the prayer statements I am signing are very holy - hand prayer signaling, i.e., hand signing.

So, unless you know for a fact, by seeing me on a tv, such as during a live broadcast, once I get my religious conveyance set up, and built by my children, after all the conditions are met, for securing this world from the grasps of the Lesbianists, and after killing all the Lesbianists, and / or after making the remaining Lesbianists surrender, and then after all other conditions are met, as I don't know all the conditions, I've set, as my memories are still foggy, as I'm amnesiatic, as well as mentally retarded, but in any case, if you see me on tv, on a live broadcast, doing my hand signing, you'll know I'm in the middle of one of my prayers, and then you can say, 'I pray to the holy body of the Creator, John Francis Ayres, for the [insert private prayer statement]', and you can omit the 'ephemeral' if you like, as it will work better if you omit the word 'ephemeral' as while I'm praying, I'm my normal, GOD, self, though I may not look to you, on the surface, to be any different, over the video links, or even in person. It never the less works better if you use my recommended methods of making prayer statements, this way, for you to maximize your private prayer statements.

All of my groups of kids have lots of friends, and they do lots of work for me, and I do not remember how many groups of them there are, and how many children I"ve got, as yet, but in time, I'll be able to give you a better idea of how they work together to get the work done, that I ask them to do for me, with my religious hand prayer signals, or hand signals, as in hand signing, or signing.

My kids use signing for all their work assignments, so I use hand signing that they can catch, pick up and read, and it is all pretty much very religious in nature, and it is very solemn, as I am GOD, and when I'm signing, they know I'm GOD, and do not doubt it.

When I am not signing, they might now and then, doubt that I am GOD, but never the less, I am GOD, and my signing proves it to them - when I am saying my religous hand prayer statements, by hand signing - with out any room for doubts in their minds.

In other words, I'm a typical person, just a little mentally retarded, brain smattered, or brain damaged, after my many youthful and other brain bashings I recieved, the wiring is a little scrambled up, upstairs, and after many poisonings by the Lesbianists - from makeing coffee from kerosene, diesel fuel, gasoline, and motor oil contaminated coffee beans and then from drinking that coffee, without knowing it was contaminated with petrol fluids, as often happens to people - and with ill health karma that has me on disability, and I've been through a lot, life after life, and sometimes, my children may have had a thought or two, 'I wonder, if he is going to make it, like he said he would?'

Well, to dispel all doubts, I sign, and when I'm signing, I remind them of my old self, back in the old days, when I used to sign, religiously, and they know how serious a guy I was, so they do not harbor any doubts, so long as I am hand signing.

What To Say, When You See Me Using My Dick Or Other Parts Of My Body

To Purify Others, And So Forth

You can say, 'I pray to the holy body of the Creator, John Francis Ayres, for the [insert private prayer statement]', also while you see me praying, Nam Myeo Ho Ren Ge Kyeo, or also while you see me in a ceremony, using my dick and scrotum, or other parts of my Holy Body to purify others, during the middle of a prayer ceremony, and I need not be hand signing, or praying Nam Myeo Ho Ren Ge Kyeo, as I am in the middle of prayers and activities ceremony, which is just as good as a religious hand prayer signaling ceresony, any day.

My dick and scrotum package is very Holy, and it has a very useful function, and that is, it purifying others. My lips do, too, and my butt hole, does as well. They all purify others very effectively and efficiently during my religious ceremonies.

My entire body, during a religious ceremony, butt hole, mouthal hole, lips, tounge, cheeks, legs, knees, feet, toes, butt, chest, back, arms, elbows, hands, fingers, head, neck, throat, ears, nose, and so forth, is entirely the body of GOD, as I am GOD, and therefore, while I am useing my body, during my religious ceremonies, and for my religious ceremonies, and you see me on tv doing so, then after you have verified that I am in the middle of a prayer ceremony, you can say your private prayer, in the manner as I've explained, 'I pray to the holy body of the Creator, John Francis Ayres, for the [insert private prayer statement]'.

I only use my dick and scrotum package for prayer ceremonies, except when I need to pee, so if you see that I am using it, during a prayer ceremony, or if you see me using any other part of my Holy Body, during a live broadcast prayer ceremony, then you'll know right away, that I am in the middle of a prayer ceremony and it is okay to use the statement, 'I pray to the holy body of the Creator, John Francis Ayres, for the [insert private prayer statement]'.

The same is true, pretty much, for any priestess or priest, who practices with me, in my religious holy body prayer circle, their bodies become very Pure, Holy, and Devine, but only after many life periods, that is, after many, many aeons, as they do not attain the same level of purity for a while, the same level of purity as I am at by my good old self, or the same level of pureness that is of ME, GOD, since I'm GOD, and they are not.

That means, it takes priestesses and priests longer to become pure, holy, and devine. I happen to be pure, holy, and devine, but that's because I'm GOD, and it is only during my religious ceremonies that you can understand that as you make your prayer statements, and sexal, etc.

After a long, long while, priestesses and priests will also become pure, holy, and devine, as their holy bodies, energies bodies that are pure, holy, and devine, but on a lower scale than are MY energies bodies, since I'm GOD, and I'm in charge of keeping things tied together, here in my universe.

After many aeons plus years of practice in my holy body praryer circle, the priestesses and priests become pure, holy, and devine, and then their bodies, their normal bodies, become very purifying, just as mine is, now, when I am in a prayer ceremony. I am in a prayer ceremony, daily, a few times, to a number of times, a day.

I've gone eighteen hours straight, once, and no sooner than I go to sleep, and then wakup, right away, I begin again, and I've gone many days, straight, praying, continuously, non-stop.

This is nothing, though, and is all preparatory, as in the future, when I get my health back, as I haven't been too healthy, for quite some time, I will be praying around the clock, some days, and for many days at a time, taking a break only to eat, drink, poop, pee, and clean up.

When priestesses and priests join with me, we will go for years without stopping, and with the priestesses, and with the priests, the both of them there, present, doing the prayer ceremony on my behalf, they can represent me, while I take a nap, go and shower, get some food, nourish myself, drink some fluids, read a book or news paper, or watch the news, or a movie, game show, video, or play a video game, and so forth. I won't be taking long breaks, and that is very funny sounding, but anyway, it happens that priestesses and priests will lose their attention, and then get lost, somehow, and then go and watch tv in their bed room, or whatever, and then we have to go and look for them, and they will get a few markoffs, and with enough markoffs, they will be asked to leave the religious conveyance, and they will be put on a type of vrobatiton, or under survielance, to see if they are good or not. My kids do all my survielance work, and they keep track of every one, so 'you'd better be good, you'd better be nice, you'd better look smart I'm telling you why, Santa Clause is coming, to town'.

Who Was Kris Kringle?

Did you know that Kris Kringle got its start from me? What a coincidence. I don't think he was wearing anything, though, or rather, I don't think I was wearing any thing, but you never know, as tolerances have changed over the long aeons of time, as they pass.

When priests and priestesses become that pure, holy, and devine, as pure, holy, and devine as I am, after their many aeons of religious practice in my holy body prayer circle - pure and devine on the exact same level as I am at - then they can represent me, as Mr. mini-GOD, and Mrs. mini-GOD.

You can not represent me as Kris Kringle, and whoever my wife was, back then. I think I had a lot of guys on that team, and a lot of women and girls, too, since sexaling was a part of that religion, too. You can learn more about it, if you're interested, by getting a day pass, and checking in with my kids, and then, signing up and joining our country, and then by becomeing a citizen, as I've spoken about, before.

You can include any good prayer, that comes to mind, that you feel is needed by you, to improve your life, and to level up your life.

You are the only ones who can pray, and practice, you women, girls, men, and boys, and there fore you are connected to me in many more ways than other living beings, the animals, and the amoebes, cells, and other living beings.

There fore, you are, both genders, the ones who will clean up the mess you have made, and you will continue to keep my universe clean, as you sexal with your genitals, and with your bodies, and with all your gizmos, igniters, trigger mechanisms, love bumps, love patches, tuning forks or ticklements, and so forth, as you are sexaling beings, who I, GOD, created, and you will sexalate, erotem, orgasm, phlumett, astral travel, peak, hyper tranceate, and so forth, just as I intended you to, from now till forever.

You will become virtuous and worthyable beings, worthyable tummy mommies, and worthyable tummy daddies, with your practice of my religion, who will bring into my universe, my many children who will join with you, and assist you and me, in cleaning up our universe, and the mess you have all made of it.

Is that understood? The answer had better be, "YES SIR!".

Lesbianists' Torment Campaign Under Way

Lesbianists are clearly releaseing wierd, ghastly, horrible, and dangerous preditorial animals, giant insects, giant spiders, giant lizards, snakes, and reptiles, ghastly, preditorial sea animals and sea mammals, winged, preditorial and horrific, aggressive scavenger and killer buzzard like creatures and other winged and destructive animals, and other horrible creatures, as well as my abominant kids to kill, maime, torture, and cause major disruptions and suffering to people, around the globe, in many locations.

Apparently, the whole world is now affected, or will be affected, by this dischordance and disharmonic display of defeated lunacy.

The peace has been shattered by the Lesbianists. It was not good before, the situation in the world, with the balooneying governments of the world, doing what they wanted to do, and torturing, and canabalizing people, and feeding people to my abominant cave bears kids, and to my crocodile people kids, and mistreating people, like Bill Gates, Steve Hawkins, Steve Irwin, many women, young girls, and men.

The war in Iraq, the phoney Saddam Hussein Trials, and all the bogus manipulation of the press and media, and the suppression of what is actually the case, with our being used and abused, poisoned, and maltreated by the Lesbianists, was a rotten situation. That was normal, or normality for us. Our karma is very poor, and we have the karma to suffer this abuse, and these torments, daily, unknowingly, in most if not nearly all cases.

But, it is becomeing really bad and there is need for serious concern, and action, to correct this situation. It has gotten out of hand, completely, and there is no stopping the Lesbianists in their wanton, and coldly miserable wish and lust for chaos and disturbances to others.

Now, more clearly than ever, as the Lesbianists rampage, the Lesbianists are causing major disruptions, suffering, anguish, and there is just an awful discordance of shock, dismay, and misery, that is growing, every moment. This is as real as the sunlight shining from the sun on a hot day in summer.

I don't have a clue what people are doing, and what is happening to them, as they are captured, tortured, and caused miserable sufferings, in many places. There must be horrible agony for many people, at this moment, and as each moment passes.

Our reality as it was has suddenly been shattered and torn up, and replaced with the lunacidal, Lesbianistic, mayhem and chaos.

Reuters reports a Lesbianists' joke for the Lesbianists, sarcastically and ironicly stateing, "New Perils Push Doomsday Clock Closer to Midnight" "(Reuters) Scientists have advanced the clock 2 minutes closer to midnight."

http://us.rd.yahoo.com/my/today/
new_perils_push_doomsday_clock_closer_to_midnight;_ylt=AmUXlewr5ev2kNK_SfOHDFAL1vA
I/*http://news.yahoo.com/s/nm/20070117/us_nm/doomsday_clock_dc_4

This is their private joke, to make this scenario more laugable than before for them. They could not care less, as they are manipulating every thing, and that statement is completely meaningless to them, as they are in control of every thing, in their conspiritorial lunacy to rule human beings, and to trash every one.

We'll see what the coming days, weeks, months, and years bring, and maybe there will be hope for change, when people begin to take action, to correct this situation, globally, united in spirit, permanently.

These are the most evil of evil people and abominant kids, in our immediate vicinity in our universe. We must begin our cleanup campaign here, as it begins where I am, and will continue from here on out, till we have rid my universe of all of these horrible people, and all others like them, and have made them surrender, or have sent them on to my Epcot Center.

I will establish my relgion in my universe, and begin my ministry, and they are not going to stop me, as my religion will bring positive change for all of us, forever.

I must establish myself outside the bounds of this Lesbianistic society, so your efforts and concern for our future, and your selfless giving of donations to my ministry, to allow me to set up my ministry, outside the bounds of this Lesbianistic society, non-dependent on Welfare, Supplemental Security Income or SSI, Medicaid, and non-reliant on the supported and financed Housing and Urban Developement or HUD subsidized apartment that I live in.

Once I receive in the mail, the 'Gift' donations to set up my ministry outside the bounds of this society, I believe things will gradually begin to positively change for us all, and the shift to positivity will begin, and a new universe for us all, will become for the first time, ever, a potential reality with the sincere religious practice by all of my followers, all of you, who are practicing my religion, diligently, and daily, or as much as your health and your time permits.

There in, with your efforts to practice, will bloom your flowers of dignity and hope, justice and freedom, willingness for sharing, cooperating, and participating with others in our new age of enlightenment, the Gurkian Age, and your new found respect for self and others.

Captain Off The Bridge.

John Francis Ayres
GOd
And Children

It Is Now Time To Kill All Government Workers, Public Workers, Preachers, Islamic Clerics, Christian Bible Teachers, Bible Thumpers, And All Other Persons Who Support The Lesbianists And Their Lesbianistic Societies Around The World - 'Fivers' To Kill Lesbianists And All The Lesbianists' Supporters - Coma Patients - All Persons Who You Kill Will Transel To My Epcot Center - Japanese And List Keeping - Surrendering And Pledging To Serve All People In My Universe - What Does This Mean? Updated: 21-01-07 Rev.d.01.a 19:56 PST

It is now time to kill all police of every police department in every country in the world. It is now time to kill all jail and prison workers in every country in the world. It is now time to kill all zoo keepers who work in zoos and other related places around the world. It is also time to kill all pet store personel, and pet store owners. We do not need people housing and feeding potentially dangerous animals. You are further ordered to kill all pets in all pet stores, and elsewhere, even in private homes. You may then eat them, after you have cleaned out their guts and removed tummy foods and rectal feces, etc., that are decaying matter, that is harmful to your health, and after you have prepared them for eating by cooking, grilling, fire place cooking, barbecuing, smoke house fermenting, or by other safe and sanitary, healthful cooking methods.

It is also time to kill every fire department official or worker, no matter what capacity the person works in, as a fire truck driver, as an ambulance driver, as an assistant driver, as an attendant or support crew person, as a maintenance man of the fire or the police departement, it is now time to kill them all.

Further, it is time to kill all public bus drivers, who work on any metropolitan or local area or state or interstate, or national bus company. It is time to kill all ships' captains and their crew members. It is time to kill all railroad rail line workers. It is time to kill all subway drivers and subway line workers, no matter what their job is.

Further, it is now time to kill all military personel, SWAT team personel, all government personel, and all civilian, or trained military, national guard, state or federal militia, toy soldiers, the people who dress up in old time war regalia, and outfits pretending they are old time, earlier period, confederate soldiers, or old time earlier period, union soldiers, who act out old time North the 'Union' vs. South the 'Confederates' and who participate in city and town parades, across the United States.

It is now time to kill all retired military personel who support the deranged, crazed, insepient, and corrupted Lesbianistic societies we live in, around the world. It is also now time to kill all persons who in any way support the governments of the world, including but not limited to, all school, university, kindergarden, missionary, day care center workers, nursery school teachers, teachers aids or teachers assistants, United Nations workers, United Nations teachers, substitute teachers, catholic school teachers, Irish protestant school teachers, parochial school teachers, all religious denominations around the world school teachers and their school support workers, government funded school teachers, tuition assistance by the government school teachers, all personel who work for the United Nations, all civil service agents, all DEA agents, all FBI agents, all FDA agents, all EPA agents, and workers, BLM agents who are Lesbianists as well as those BLM agents' who are Lesbianists as well as those friends of theirs, who support the Lesbianists.

It is also time to kill all other federal, state, or local, or globally tasked organizations, such as the CIA workers, INTERPOL workers, the several groups of workers within the Canadian Mounties, NIC a spy department of the U.S. Navy, the Korean C.I.A., the United States Presidential Police agents the Secret Service Agents, National Park Rangers, State Park Rangers, Forestry Service workers, Pentagon workers, National Library Of Congress workers, and all others who work in any capacity supporting any government organization, those listed above, and all others, as well as all persons who support the Lesbianists in any way at all.

It is now time to kill all judges, bailiffs, Supreme Court Justices, and the employees who work in their organizations, and all other judges, legal clerks, para legal workers, court stenographers, justices of the peace, lawyers, attorneys, state attornys, prosecuting attornys, defense attornys. It is time to kill all officials of all government organizations, and all the people who work for them and or even only support them, such as restaraunt workers who feed them lunch, coffee shop workers and owners who feed them coffee and food, bars and restaraunt personel and owners of bars and restaraunts who support and feed any and all persons connected to the governments of the world and who work for them in any capacity at all.

It is also time to kill all the money lenders who loan money to the Lesbianists, the mortgage company owners who provide the Lesbianists with house purchasing loans, and all the supermarket workers and supermarket owners, who supply food to the Lesbianists, as well as all of the druggists, the pharmacy workers, who supply medicines to the Lesbianists. It is time to kill all the taxi cab drivers who give rides to the Lesbianists, and to every person who supports the Lesbianists in any way, at all, unless those people surrender to my kids.

It is also now time to kill all civilian or civil servant or state civil servant worker who supports in any way, any Lesbianistic organization, such as the police departments, federal agencies, fire departments, libraries, schools, and so forth. It is also now time to kill all persons who maintain or provide services to any of the above listed organizations, and to all of the similar organizations in every country in the world.

This is my order to all of you, and you are all ordered, by me, GOd/ GOD, to kill all of them, unless they surrender. People also call me, 'Allah'. I'm the same person. Just do as I tell you.

You are to take my fuels' bombs with chlorine plastics' explosives formulas, and all other explosives formulas I've explained about on my bulletin board and the fuels' bombs explosives formulas including but not limited to radiological 'fracturable' rocks that provide so-called 'nuclear' explosions, all of my bombs' formulas, and all other bombs' formulas derived in part or in whole from what we have learned as I've explained on my bulletin board and to take them, and make the bombs and explosives, and to then use them, and then destroy and kill all of the Lesbianists, and all of the Lesbianists military bases, buildings, and kill every last one of them, all of them, leaving no one alive.

'Fivers' To Kill Lesbianists And All The Lesbianists' Supporters

You are to then make certain they are all dead. If they are not dead, you are to kill them with a 'fiver'. A 'fiver' is a bullet with five lines drawn or scored with a knife or sharp instrument into the tip of the bullet, to form a 'five' line pattern, so that the bullet will fracture into 'five' parts.

You are to take three 'fivers' and shoot each person who has not stopped breathing, and who is not dead yet, and shoot the three fivers into the head of the person, to make certain the person dies.

Three 'fiver's will destroy enough brain material, to kill any person if the bullet is large enough, and the handgun, rifle, or weapon is powerful enough.

The handgun bullet size must be at least larger than a .22 calibur, and at a minimum, 7 millimeters. You may use .38 calibur, 9 millimeter, 10 millimeter, .45 calibur, or any other, large sized bullet to make certain they are dead. Buckshot, 8 guage to 10 guage, or any comparable rifle load or handgun load, or home made weapon load, will work equally as well, with three shots into the skull. A machete or similar instrument should then be used to chop the head off of the person at the neck line. If you have a machete or hatchet, or axe, and if you prefer to chop off the head of the person, then by all means, you are to do so. The point here is to kill the person one hundred (100) percent, and not leave the person in a coma.

Coma Patients

A person in a coma is perfectly alive, and can hear every word you are saying, but can not respond. People in a coma after severe accidents, such as near fatal traffic accidents, where their limbs were broken into pieces, or war victims, who are on life support in Veterans' Hospitals, can be in agonizing pain, and no pain medications are given to the patient as the patient has no way of communicating with the doctors, nurses, or staff members to complain about the pain, in many or in most cases, if not nearly all cases. Some patients can write or scribble out a note about the severe pains, or make gestures with their hands, pointing at painful spots they are able to point to, and then making squeezing motions, to indicate as best as they can, that there is something wrong in the area. Some people may catch the meaning of the gestures, but others do not, and may just wonder what is going on with the patient and they may wonder what the patient means by the hand gestures. Others, doctors and nurses, and staff members will merely find it amusing that the patient is making the gestures. Some doctors and nurses, and possibly staff members, will figure out the patient is in pain, and then steps can be taken to alleviate the pain, but it is an ordeal for the patient, and it may take months, or in some cases, years, before staff, cleaning persons, food servers, orderlies or assistants, nurses, or doctors figure out what the hand gestures mean.

The coma patient, after healing from the injuries, may still have residual pains, such as residual spinal pains, or neck pains, or ligament pains where ligaments were twisted, or ruptured, or severed, partially or wholly, and the ligaments didn't grow back properly, or didn't grow back fully, or much, or perhaps, in some cases, not at all, which does happen a lot, and each time the patient is moved in her or his bed, the person experiences extreme pain as no medications for pain are given to the coma patient, unless the patient has been successful in communicating that there is pain felt by her or him, in her or his body.

Leaving coma patients on life support systems is the cruelest thing you can do to a person in a coma as there is no such thing as being 'brain dead'.

It is a cruel and abominable Lesbianists' joke on humanity, and on all persons, that the Lesbianists have perpetrated with their teaching doctors and nurses that coma patients are brain dead, and do not feel, hear, taste, or sense, anything at all, and it is just another one of the Lesbianists' ways to hurt and torture people, and cruelly and ruthlessly abuse human beings, in this case, in most of these cases, by proxy. There are doctors who are Lesbianists, and I have one who is one, that I am aware of, and he knows exactly what causes my health problems, but he sits there, non-responsive, and with a vacant stare on his face as if he doesn't hear, see, or know of any thing that is going on, something like the three monkeys with hands clasped over their, ears, eyes, and mouth, who represent 'hear no evil, see no evil, speak no evil' and then 'therefore, every thing is alright'.

All persons with brains, whether in a coma, or other sleep like state or condition, is perfectly brain alive as the brains and nervous systems, auditory, taste, touch and sense nerve systems, never die, until the patient stops breathing, and passes on.

All nurses and doctors are to remove all life support systems from all persons in a coma, immediately and confirm the persons have died. That will allow them to transel into my Epcot Center, and then be born again, as a tummy baby to a tummy mommy and to tummy daddies.

All persons in a coma, whether in a hospital, or in a nursing home, or at a private home or apartment, or in a group home, or group care center, are to be told the truth of this, and are to be told that you just leared it, and are to be told that I am GOD, and that I have an Epcot Center staff waiting for them to come in, to be treated for their traumatic condition, of not being able to do any thing about their condition to end it, as it is a miserable situation for these people who are in a coma, or in any trance like state or condition that resembles a coma, or a sleeping person, who can not wake up. The person is perfectly brain active, and there are no measuring devices to prove it available to hospital staff or to doctors, as none are made, and the technologies to detect a person's brain activeness and aliveness are kept secret after they are bought up, and then after the records of them are destroyed, and the information on them are kept secret and locked away, in vaults, and in storage facilities, hidden from view so that no one can get the information, and build a device to detect a person's brain alertness status.

After they are told the truth, and that you just became aware of it, you are to tell them to not be afraid, and that all measures to relieve them from their present condition, and all measures to assist them to transel to my Epcot Center, where they can recieve personal care, and then helped to recover from the trauma of the coma, or coma like state of not being able to wake up, speak, and talk to people. They are then to be injected with a powerful sleep sedaditive, or induced to swallow several strong sleeping pills, as they may become afraid, and then, you are to help them to pass on, and to transel over to my Epcot Center.

In some cases, if you pull on the large toe of a person, or on the thumb, the person may have control to pull in the opposite direction. That is an indication that they are awake, and fully aware of what is going on around them. Please check patients to see that they have soundly fallen asleep, and snoring or breathing quietly, in relaxed manner, may be the only sign that the person is asleep.

Any sign of movement, mentally driven by the patient, no matter how slight, is nearly most always, nearly one hundred percent of the time, a sign that the person is completely brain alive, and that the person is completely aware of what is going on around her or him and can hear every thing. Even passing or expelling gas or farting, can be 'mentally' driven, and a sign the person is awake, and alert, and brain alive. Opening one's mouth is almost always, one hundred percent of the time, mentally driven.

Persons's in a coma, who have Eplilepsy, or other similar brain or neuro muscular disorder, and other conditions where patients experience spasming, whether the condition is diagnosed or not, these patients who spasm, may make some spamodic movement, now and then, and that is only a sign that the person is haveing a neuro muscular muscle spasm. Knee jerks or other similar movements, are not always muscle spasms and can be labored, mentally driven actions. These actions show the patient has control to that extent over her or his muscles, body, skeletal system, and other body systems related to the movement.

In any case, after the patient has fallen asleep, you are then to kill the person, and let the person transel to my Epcot Center, so that the person can recover in my Epcot Center, and then be born as a tummy baby, to a tummy mommy, and to tummy daddies.

All Persons Who You Kill Will Transel To My Epcot Center

Once you are certain all of the police, fire, teachers, and all others who support the Lesbianists' societies around the world are dead, they will transel to my Epcot Center.

It is now the time to bring an end to the lives of these people who support the crazed, insepient, bogus Lesbianists, and to destroy them all, leaving no survivors. Kill all of their family and relatives, and leave no one alive. Kill them all.

My Epcot Center will not be in any way, inconveinced by your brave and heroic actions. All doctors must be killed, all nurses must be killed. All medical techinicians must be killed. All library workers must be killed. All school teachers must be killed. All art museum and gallery museum workers must be killed. All workers for all of these institutions must be killed. All of them, in every country of the world, unless they surrender and plead for mercy, and then are allowed in to my kids' place, for swearing in and for joining as civilians, my country.

Further, it is time to kill all media corporations personel, such as news casters, news men, news women, anchor persons, cameral men and women, talk show hosts, administrative persons, Hollywood's movie actors and actoresses, all radio broadcasters, and all personel of all radio companies. It is time to kill all news paper company owners, and publishers, editors, and all workers of these companies, unless they surrender to my children and plead for mercy.

It is time for all of you to kill all of them, and make sure not one of them is left living, including and most importantly, all politicians, who must all be killed, without any further delay. It is time to kill them all.

It is now time to kill Oprah Winfrey, Geraldo Rivera, Sarah Jessica Parker, Judge Judy, Jerry Springer, Liz Taylor, Michael Jackson, Clint Eastwood, Cher Bonno, Morgan Freeman, Steven Spielberg, Al Gore and his family, Hillary Clinton and her family, all of them, Jeb Bush and his family, all of them, Nancy Reagan and her family, all of them, former president of the United States President George Bush, Sr. and his family, all of them, including all persons related to him in any way, and all persons who work for him, in any way, and all persons who work for any of his associates, in any way, unless they surrender to my kids, and then plead for mercy.

We are not going to allow the Lesbianists to continue their illegal, inhumane, and horriblesome practices and activities on my planet, and in my universe, a moment longer. They must all die, now.

Is that understood?

I hope the answer is, "YES SIR! Mr. John Francis Ayres, GOd", as a 'negative' reply to my question is not acceptable.

Japanese And List Keeping

I haven't confirmed it, but from what I know, so far, the Japanese are very good at keeping lists, and they know about all the foreign people in Japan, and they keep lists of names of all of them, and they keep lists of names on all of the Korean people, and the Singaporean people, the Chinese people, the Ainu people, and the cast outs or 'burakumin' a group of meat cutters and fish sellers who some how got on a list of people who were felt to be 'unclean'. The 'burakumin' was a group of people who no one in Japan wished to talk about. The Japanese also, apparently, had lists on groups of people, who they didn't know much about, but they knew they were always doing things with each other. Those groups of people were the Lesbianists, so the Japanese knew all along, who I was talking about and were nearly one hundred percent certain those groups were the Lesbianists living in Japan.

They read what I wrote, and the notes of mine were passed to many people on an e-mail mailing list, and when they heard that Steve Irwin had been killed, they felt they had heard enough and they told all their friends about my notes, and then the Japanese killed all the Lesbianists in Japan on that list they kept.

It's something I heard, and I haven't confirmed it, but I think the Japanese are fully capable of handling that, as they were fully prepared to deal with each one of the Lesbianists, and they knew who they were, and once the Japanese united, and decided to take action. The Japanese escorted all the Lesbianists to a meeting place, to which the Lesbianists were not happy to go to, but had no choice but to agree to follow the Japanese citizens who escorted them there, with the military or Japanese Self Defense Force, the Coast Guard, and National Police, and all other police agencies in Japan, plus the national organization of fire department workers, backing and supporting all the Japanese citizens.

As to what they did with the bodies of the Lesbianists, I'll leave that to them to explain to you, as it was quite brilliant and they had many very good ideas for dealing with the bodies of the deceased Lesbianists, who are apparently now in my Epcot Center.

The Japanese country side is now peaceful and quite, and things the winds are blowing, peacefully, and gracefully over the Japanese country side, cities and towns, across the ponds, marshes, lillies and lotus flowers swamp lands, bogs, bays, estuaries, lakes, streams, rice paddies, fields, mountains, and islands, from what I can understand and gather about the situation in Japan.

Surrendering And Pledging To Serve All People In My Universe

If the Lesbianists and their supporters surrender to my children, and then promise to devote their lives for the sake of others, serving man kind, and all human beings, and all people on this planet, and in my universe, for the rest of their lives, they will be allowed to surrender to my children, and my children will then arrest them and put them in a prison cell. If they are not willing to serve others, despite the fact that they say they will serve others and devote their lives for the sake of others, serving all people in my universe, then my children will ignore them, and my children will not arrest them because my children know they are lying. They must promise to do all they can that is humanely possible, for the sake of others, and devote themselves to the prosperity of others, for eternity. If they are not willing to do that, then please, just send them on to my Epcot Center, and we'll straighten them out, for there. My staff at the Epcot Center has training programs to straighten them out and make them nicer people, so that next time they are born as tummy babies, they will behave and be nice to others, doing nice things for other people, after they are retrained, a little. The retraining program takes a while, but the results are very good to excellent.

If my kids decide that the person who is surrendering, is telling the truth, my kids will use the special teletransportation technology, something like what we see in Star Trek on tv, with Captain Kirk saying, 'Beam me up, Scotty!', as many of us have seen on daytime tv, or in the movie theater, and my kids have very good teletranportation technology or 'beam me up, Scotty' technology, and the person, once he or she pledges honestly to serve others, will instantly dissappear.

Do not be surprised if when the person surrenders and promises to 'serve others', promising to devote her or his life for the sake of others, the person suddenly dissappears, and instantly, the person is no where to be seen. The person was 'beamed' into a prison cell that my kids have constructed, using other technologies, and we have many prison cells waiting for the Lesbianists and for the Lesbianists' supporters, and for other bad kids in my universe, as well.

For each person you kill, my kids will keep earning points scores on your efforts to send them to my Epcot Center, and you will be paid, when you have finished your job, and then finally, go in to visit my kids. My kids will pay you in the monetary currency that is used in the underground cities my kids have built, for protecting people from these horrible Lesbianists and for protecting people from the abominant kids of mine, and the ghastly and naughty animals and very large bugs and spider like creatures, that the Lesbianists use to help them torture people with, to make the Lesbianists laugh, and to amuse themselves, as I've explained a little about, already. The more Lesbianists and Lesbianists' supporters you send to my Epcot Center, the more earning points you will score, and the more money you will earn, and you will be paid that money, when you go to visit my kids after you have finished your work, killing the Lesbiansts and the Lesbianists' supporters.

If the Lesbianists and the Lesbianists' supporters do not disappear after they surrender, and after they promise to serve others, and pledge to devote their lives for the sake of others, the Lesbianists and the Lesbianists' supporters are lying, and you can then kill them, and send them on to my Epcot Center.

My children will escort the deceased Lesbianists and Lesbianists supporters, once you kill them, into one or an other of my Epcot Centers, and will make sure that the Lesbianists and the Lesbianists' supporters get in for a meeting with one or another of my managers, or with one of the staff members who work with my managers to arrange retraining programs for rehabilitating the Lesbianists and the Lesbianists' supporters.

The Lesbianists and Lesbianists' supporters will not qualify as tummy babies, until they are finished their retraining and rehabilitating programs. After they finish, they will be out, again, to join the rest of you, once again, but this time, as nice, kind, courteous, and polite people.

What Does This Mean?

It means, I want all the Lesbianists dead, but if they will surrender, and if they promise to serve all human kind, all people, and work and strive to enrich the lives of all others, dedicating their lives to others, then, you do not have to kill them, and you do not have to send them to my Epcot Center. If they are honest when they surrender, and when they promise to serve all people, devoting their lives to all people of the world, then my kids will 'beam' them in, using the teletransportation technologies that my children use. If they are lying, then my children will not beam them in, and they will be stuck where they are. If they are stuck where they are, after they surrender to my kids, and after they promise to dedicate their lives to the welfare of all others in the world, and to all others in my universe, then they were lying, and you may then kill them, and send them on their way to my Epcot Center, for retraining, and for rehabilitation.

It also means to kill any person who works for the Lesbianists, if he or she is supporting the Lesbianists to try to stop you from killing the Lesbianists. Also, it means that you should kill any person who tries to interfere with you, while you are trying to kill the Lesbianists.That's what it means.

Fermenting Oils - Fracuses Kiddies - Slugs, Snails, And Other Bottom Feeders - Feeding Everybody In Our Bodies - Putting An End To The Global Menace Of The Lesbianists - Changing Our Societies, And Our Universe, Forever Updated: 22-01-07 Rev.x.00.a 07:45 PST

Mix raw sugar, ocean salt, sessame seeds, dried fermented berries you have taken from a mix of berries fermenting as a flural hydrate liqour, or as a plain fermenting liqour, and make sure you dry them out in the oven, before useing them.

Mix the items together in a container, and mix in a drop or two of apple juice, pear juice, papaya juice, kiwi juice, banana juice, cherry juice, cranberry juice, strawberry juice, peach juice, nectarine juice, or plumb juice, and let the moisture settle into the mixture to allow it to become only partially and only very slightly moiste, and not wet or liquidy.

Allow the mixture to sit in a warm or cool place for a week or two, to eight to fifteen weeks, or even a few years, and it will grow molds in it, and with the longer the duration up to a point of sitting and molding, the more useful it will become.

It might develop a pungent, unpleasant odor, like a dead animal smells, which may mean that a fungus that is not very suited for you to use as a starter mold for starting a fermented oil batch has developed in the container, and in that case, you can throw the whole mix out, or use it for fermenting beans or something. Cheeses can be made with these kinds of growing funguses and molds, if you are the daring type, who likes to experiment with new and different tastes from variously fermented mixtures.

You can add some ocean salt, and make a soury vinegar, and then try to rescue it with the combination of the soury vinegar, ocean salt, and a little raw sugar, and some honey.

It may be that some bacteria is in the mix, and it needs to be eaten up, before you can use it safely for a healthy mold mix for starting a nice cheese molds and funguses mixture.

Ocean salt can be added in slightly large amounts with raw sugar. Once the odors have stabilized, and once they have developed a more pleasanty odor of a fermenting mixture, with a slight alchohol ferment odor that will indicate that it is alright to use, and that it will not be harmful to you.

In some cases, the bacteria in the base mix, may be a result of hairs or particles of skin from the body of a dead rat or mouse, that some how found his or her way into the sessame seeds, or into the dried spices, or into dried berries that you used, and then died.

In that case, you might as well throw it away, unless you have a lot of patience, and do not mind waiting and working with it, for several years, for it to become something you can use.

One way to make it into something you can use is to mix in a high potency liqour brew, and let it sit for a number or years, and ferment it, and then after it smells nice and rosy smelling, after ten to fifteen years, to thirty to fifty years, you can evaporate the liquids out in a pail on an open porch that has a net covering to keep animals and animals' hairs out of it. Make sure there is good ventilation, and it should evaporate out, safely after a number of days on the porch in the sun. If there is no heat to make it hot enough to combust, and if there is good ventilation, it will not combust, and it will evaporate out, safely. Adding ocean salt and raw sugar to the mixture so as to fill it up with raw sugar and acidic ocean salts, will further help to safely evaporate out the liquids and prevent the liquids from combusting, accidentally.

Once the liquids have evaporated out, safely, you can use the materials that remain in the pail or container, to start a fermented oils brew mixture, or to start a cheese molds and funguses mixture, if you wish to make a nice cheese molds and funguses mixture.

The particles of skin or hair from the dead rat or mouse, or pidgeon, or other animal, will have been eaten up by all the ferment fracuses kiddies, and will no longer pose a threat to your health.

Fracuses Kiddies

Ferment fracuses kiddies are just plain old ferment kiddies who like to devour large bits of human or animal tissues, mites, or cockroaches, or their body parts, and then poop them out, and pee them out into the liqour brew.

You'll always have some of these kiddies in your brew mixes, and they are useful to you, as they eat up the things that you do not want in your tummy. Also, there are other kiddies, such as snails, and other bottom feeders, that find their way in, in the skins and pulp material as tiny animals, or the eggs of animals, and they hatch, and they develop, and they grow big, and they then bottom feed, and they eat any dead rats, and dead rat parts from rats that might have fallen into the brew. These are useful pets, that you want in your rum and liqour brews, as they will keep the liqour brew healthy to drink, and they will keep you from getting ill.

Slugs, Snails, And Other Bottom Feeders

In the old days of bucanneering, as I may have mentioned, before, this was a crucial part of keeping the sailors alive, on their long voyages, and if crew members fell ill due to an unhealthy brew, with a dead rat in the mix, making it sour, and making it unhealthy to drink, then if there are not enough snails, slugs, and bottom feeders in the barrel or rum to eat the dead rat parts, the sailors will get ill, and when they get back to port, they will hang the rummery owner, and give the business over to the son, or to a third party, often times, one of their fellow crew members, who is liked by all the people, locally, and on the ship.

This is the case, still today, with many rummeries owned and handed down in the same family, from such instances as that.

Bottom feeders, slugs, snails, and many types of bottom feeding earth worms, and other types of healthy bottom feeding worms, that cohabitate well with the slugs, and snails, and other animals that are too tiny for you to see in the rum brew mixture, without a powerful microscope like, optical videoing technology, are essential to your brews mixtures, and they may increase in numbers as they make babies like every animal and living being does, and so now and then, you need to reach into your brew container, with your hand, or with a fine mesh small aquarium use fish net, and scoop them out, and flush them down the toilet, or let them loose in a local pond, lake, mountain stream, or water springs fresh water well, where they will help to keep the water clean, ahd healthy.

Once you have the materials to make your fermented oils mixture, you can add them to your container of food oils, and begin to ferment them, or use them to make a nice cheese mixture, to ferment and then to make solid as it matures with age. You can also use the materials to make a fermented bean mixture, or fermented barley, or fermented rice, or fermented millet, or fermented wheat mixture.

You can also use them to make a fermented brew mixture, as there will be many healthy molds and funguses kiddies in and among the dried out materials. Your health will improve, and by adding different spices, nuts, berries, root particles, ground up kiln dried pine cones that were green to begin with, and then fermented for a few months to a few years, in a brew mixture, then dried out, and ground up into a saw dust powder consistency, you can then have lots of crystals cages salts kiddies of various kinds help you to make a nice regroverative brew, to help you to regroverate your amoebes.

Feeding Everybody In Our Bodies

You know, we need to eat foods to stay alive. We also need to feed all the living animals in our body, to help them to stay alive, so that they can help our health remain normal, from day to day. We also need to feed the amoebes all the foods and juices, salts kiddies, and the poopy liquids and pee liquids, and other liquids with other types of tinier salts kiddies in them, as well as other types of food kiddies, we haven't learned about, yet, but with all of them inside your tummy, you'll be able to feed every one who needs feeding, and then you'll be successful with your amoebe 'auto regroverate mode, on!' formula, so long as you have degunked your body of all the petro chemical oils, kerosene, diesel fuels, and other chemicals, the Lesbianists have been feeding you, from birth, in your diets, if you live in a society, where you are fed baby formula mixtures from Gerbers or Heinze, or any of the other baby foods manufacturers.

Putting An End To The Global Menace Of The Lesbianists

We need to put an end to this practice by the Lesbianists of poisoning us with their petro chemical industry oils and tars salts kiddies, which they use to rot our teeth out, and cause tooth decay, and which they use to cause ulcers in people's tummies, and which they use to cause lots of unpleasant illnesses, and diseases in human beings, and in farm animals. These petro chemical salt kiddies, and formaldehyic salts kiddies, all harm our amobes living beings children, and all the other animals that live inside of us. One day, we will have a lot of people practicing my religion, sexaling, and making prayer statements so as to help us to erase the karmic markups we have, that keep us living under the tyranny of these Lesbianists, and in their societies, suffereing the daily poisonings that cut our lives short. When we have erased enough of our karmic markups with my religion's religious practice of sexaling to purify our selfs and others around us, and to clearify and erase our karmic markups, we will eventually be able to say good bye to the Lesbianists, and their practices of poisoning us, and causing us major headaches, or problems in our lives.

Changing Our Societies, And Our Universe, Forever

At that time, we will be able to say hello to a whole new way of life, and that will be the beginning of our new, thrilling, and excitingly challenging, one world, unified, planetary, global culture, and it will be the begining of our new, thrilling, and excitingly challenging, one universe, universal culture for all of the people in our universe, who we have been living in our universe together with, since we first came out, and began living here in my universe, a very long time ago. We have to start somewhere, and so here we are, now, begining to prepare the foundation for our long and prosperous journey ahead of us, as we clean up our universe, together with each other, and clearify and erase all of our karmic markups, and all of the karmic markups of all my children, and of all living beings who live with us, together with us, in my and our universe. We need to take responsibility for this clean up campaign of ours, as we are the only ones, besides my many worker, unionized children, who can use our brains, and use our sexaling organs, to produce purifying energies of all types, to help us clearify and erase all of our karmic markups, and all karmic markups, and karmic things and dings, of all of my animal children, and of all of my living beings children, and of all of my human children.

My kids have built underground cities, to help us to get started, in learning about the new ways of living together, and of sexaling together, for practicing my religion together with each other, so that we will be able to prepare ourselves, for our new global, unified society, and for our new, universal, united, civilization. We have a long ways to go, but we are starting now, with your efforts to correct this situation by eraseing the karmic markups and karmic things and dings, that have us living in this truly awful situation on this planet, in our universe, that we are now, curently living in. One day, when all the Lesbianists are either dead, or have surrendered to my kids, we will be able to gradually educate ourselves, and change our understanding about women and girls, and about men and boys, to understand the truth about women and girls, and about men and boys, and then we will begin our new and exciting journey into our future, together, with my religion at the basis of our new, unified society, universal culture, and universal civilization.

Donations To GOd

Why can't anyone donate any thing to me? I am GOd. So, how come no one can send me a penny in the mail, or a box of cookies, or a pair of socks, or something? I don't think I'm asking for too much, but I'm just curious about why no one can send me anything in the mail?

I don't get any phone calls. No one sends me any e-mail. No one tries to visit me. I have a religion, and I'm asking people to practice it. Now, how come no one can contact me?

I once said that I am in a monastic mode, and it is a cloistered monastic mode. That means, no one can be contacted out side of my monastery by any one inside the monastery, and no one can contact any one inside the monastery, by any one outside the monastery.

If there is no legitimate monastery business then no person will be allowed to contact me, or for that matter, any one else inside my monastery, who is leading a monastic life, with me.

Well, there is only me, right now, but maybe in the future, some one will be in my cloistered monastic discipline with me, helping me with my religious duties of doing my religious ceremonies, as I've mentioned about, before.

Monastic Mode

What does my 'monastic mode' mean? It means that I am here as GOD. You know, there is only me. I of course never sent any one, such as the Lesbianists claim. Why would I? I don't need any one to do the things I need to do. That's sheer idiocy to think I would have a son or daughter, and send them to do my business. That's absurd. You've been snookered into believeing all those hogwash tales, and now you don't know who I am, and you don't have the karma to believe in me, as a result of your following and believeing all those hogwash tales. My kids are everywhere, and they are doing their jobs.

Who Works For Me, Anyway?

Now, as I've been saying, I'm going to have you do your jobs, and that is to use your genitals, and to use your body, and to use your brains, and then participate in my religion, using your genitals and your body and your brain, and sexalate with each other, and purify your karma? Does that sound like a joke to you? If it does, you are very mistaken because it is not a joke in any way, and I am absolutely serious when I say that you are going to use your 'equipment' and I almost want to call it, your 'field' equipment, because you are armed with it, day and night, and you are going to use that equipment, to clearify and erase your karmic markups, and to purify my universe. Is that okay with you? I hope it sure the hell is, as a "NO SIR!" at this point, would be an unsatisfactory reply. Do you understand me? I hope so. You are going to jump ship, as I order you to, or be thrown over board, if you have a problem with that. I hope you understand.

Well, as far as I can figure it, no one realizes that I am GOD, so no one can donate money to me. If some one realizes that I am GOD, than for the first time, that person will be allowed to donate money to me. That person will be allowed to visit me, or call me on the phone, or donate money or food to me, or practice my religious ceremonies with me, if that person believes, and understands, and realizes, that I am GOD.

Right now, there is no one who realizes or understands that I am GOD. No one of course believes I am GOD. Never the less, I am GOD, and I am sitting here, waiting for donations, to help my ministry get started.

So, that is the reason that no one can get through to me, or donate money to me, or send me a postcard with some kind of message of cheer and support in it.

There doesn't seem to be any body who believes that I am GOD. Well, that isn't surprising. People do not have the karma to believe that I exist, is one way of looking at it. They have ignored my existence, and have not had any real thoughts about me that would link them to me, in my monastic mode.

What does that mean? It means, that no one remembers me, as the guy who created all of you.

It also means, that I am in a religious mode, and no one understands that, or believes that I am in a religious mode.

That is peculiar, since I am giving you a religion, one of my oldest, for you to practice, that will assist you in purifying your life, and that will assist you in eraseing and clearifying your karmic markups.

That's very peculiar, but it is not that peculiar, as you do not have the karma to realize and understand that I am GOD.

In any case, there will be no donations, no telegrams, and no phone calls or letters to me, so long as you do not realize, understand, and then of course, believe that I am GOD.

Well, any way, so it goes.

Obeying Orders

Now, I want all these people, killed. Hillary Clinton. Bill Clinton. Chelsea Clinton. Ted Kennedy. Al Gore. Tipper Gore. Harriet Gore. Cheryl Gore. Dave Gore. Bill Gore, and all people who call them selfs, Gore and pretend to be related to Al Gore, or to Tipper Gore. Mr. Al Gore has lots of friends, who are also Lesbianists, and I want them all killed. Oliver North. Monica Lewinsky. Eve Arden. Elizabeth Arden. Michael Jackson. George Bush Sr. and all other George Bushes. Do you understand what I mean? It means, that they are all Lesbianists and they are all going to die, and we are going to blow up Washington D.C., and destroy Capital Hill, and level that area, and make it sink beneath the waves of the Atlantic Ocean. That's how big a bomb I want you to make, with my fracturable rocks, to then blow that area out of the water, and make it sink below the waves of the Atlantic Ocean. You'll probably need more than one bomb.

Did you know that Washington, D.C. is lying on a fault line, deep down, and it is on an ocean shelf, that has the ocean under it, lapping at the earth, very far down. That means, that it is on a fault line, and it is on a shelf, that is hanging over the ocean's waters.

Now, if you hit Baltimore, and Maryland, and Northern Virginia, and Washington DC with a large enough bomb to blow Baltimore out of the ground, and level it, and with another bomb large enough to blow Washington DC out of the ground and level it, at the same time, and a few more bombs, large enough to blow Maryland, Virginia, and that whole metro area out of the earth, at the same time, you will sink the nation's capital, that is, Washington DC, below the ground, as it will break off the ledge that it sits on, and it will sink into the ocean, as the ledge crumbles below it. There will be water, from the Atlantic ocean, all the way out to West Virginia.

Now. I have every right to say that, and demand this, as it is a matter of self defense, as I know these motherfuckers are eating people, cannibalizing my kids, for their amusement, thrills, and fun, and they will continue to do that UNLESS THEY ARE STOPPPED! Do you understand that?

I hope so. I am going to see the whole of Washington DC and the area leveled, with Baltimore, and Northern Virginia, and Maryland, as well, and we are going to sink that area into the ocean, and make it disappear below the surface of the waters of the Atlantic. Now, that should be clear, shouldn't it.

This is not a joke. We will have to send a lot of my children to my Epcot Center, in the blasts that will occur, and in the after math of the blasts, but that is unavoidable.

We will have many people, drowning in the waters that come in from the ocean, and that stretch out to the hills of West Virginia, with only slight outcrops of land, hills, here and there, with a few people lying on top of them, blinded and in awful pain, but they will not live long, as they will not be able to survive for long, and they will pass on, die, and then they will transel to my Epcot Center, where they can get medical relief, medical treatment, therapy counseling, and rehabilitative therapies.

Now, that is what we will do to Washington DC and vicinity, so every one, please prepare for it, and get your pain medication in order, so you can take an over dose of pain pills, when your area is blown and shredded to bits, with one or more of my fracturable rocks bombs, as I've explained about.

Every Politician In The World To Be Executed

Next, I want every politician in the world, canceled out. I want their passports for living on our planet, canceled. That means, I want you to kill each and every one of them. Not only do I want you to kill them, all, but I want you to kill every single one of their associates, around the world. They are all Lesbianists, except for a few of them. If you happen to kill one of the non Lesbianists policitians by mistake, that is okay. They have the option of surrendering to my children, available to them, and once they surrender, they will not be killed, by accident.

Every Hollywood Actor And Actoress To Be Executed

After that, I want every Hollywood actor or actoress killed, and that includes all the actors and actoresses, around the world, and they must surrender to my kids, if they wish to not get killed. There are a lot of them, who are not Lesbianists, so those I've mentioned, who I've let you know are not Lesbianists, you can forget about them, and leave them alone.

There are more than a couple of billion Lesbianists living under the earth's surface, in underground cities. I did not realize there were so many. We need to kill them all, so we will, in time, unless they surrender.

Is that clear, every body? I hope the answer is, "Yes, Sir!" as you had better not answer any other way, or you will get yourself on my shit list. Is that understood? Good. I am the boss of my universe, so if you do not like it, than jump overboard, now, sailor. Have you got that clear? Good.

Jump Ship, Explained

What does 'jump overboard' mean? It means you are going to have severe problems with me, if you do not obey orders, and that there will be difficulty and jail time, ahead of you, if you continue to ignore my commands to you. It means there is going to be trouble, if you do not obey me. My kids are in charge of handling all the details on that, and it is not a joke.

Fair Warning

We are not going to let these Lesbianists run their show, one more minute. We are going to put an end to them, and their activities, here on this planet, and every where else in my universe, and this is fair warning of that.

Particle Remis Technology And Particle Dismiss Technology

As I said, once before, there is a technology called particle remis technology. There is also a technology called particle dismiss. They are the technologies that you can use to feed 2.3 billion Lesbianists down under the surface of this planet, and on every other planet that they are on.

Dismend Technology And Remend Technology

It is easy to dismiss molecules, and to dismiss, or dismend all the beings who need to be dismended, and sent to my Epcot Centers. It is also easy to remend them, and then get them back into the foods that I need them to be a part of.

My kids keep track of every one who needs to be dismended, and then remended. That is a lot of work, keeping track of every one, but that allows us to dismend the living beings, and animals, that I can let off from duty, and from further service, and then send to my Epcot Centers for them to live in. I can then recall them to duty, and remend them, and then have them serve in an apple or an orange, or banana, or a brick. Do you think that is a joke? It is not a joke, and there is no joking allowed, on my shift. Do you got that? I hope so, because if you do not, you will have to learn how to swim a long ways, as it is going to be a long way from shore, after I ask you to jump over board, and I have sailors who practice, all the time, just to show the passengers how it is done, just in case. I will have you jump from ship, if you do not get along with me, and if you disagree with what I am doing, pretty soon, as we are departing, now, or just about now. That means, we are not going to play around, much longer, and we are going to set sail. That means, there are going to be a lot of people practicing my religion, pretty soon, as they will learn about it, and they will begin practicing it.

Mentalcosis / Mentaltosis And Comatosis

Mentaltosis is the state of a vegetable, like a stalk of cellery, or a plumb, or an orange. Comatosis is the state of complete awareness of self and others. Comatosis is not brain dead, i.e., more or less, mentaltosis, with no real significant brain activities occuring, other than the ones that keep you alive, and vegetative, and you do not need assistance to remain and function in a state of mentaltosis, and the Lesbianists know it. You are severely brainally handicapped, and when you come out of it, eventually, after you have your karma fully completed for being mentaltosically ill, and after it is then time to get on to something else, you will be very brainally handicapped, and you'll be an extremely retarded person, with little to nearly no brain awareness going on about self and others, but able to walk, barely, and later, after many many lifetimes as a mentally retarded individual, you'll begin to be able to mumble a little, or babble a little, for umpteen lifetimes, as you begin to get your higher brain functions, back, which takes a very long time to work out, and many many lifetimes to work out, karmically.

Comatosis is like a hit on the head, and when you wake up, your faculties are not all working, and you may not be able to speak, or move, or talk to your friends, but mentally, you are all there.

Mentaltosis is like a train ran over your brain, and every other nervous system in your body, nearly, and you are completely unable to think, or do any thing else, and you are reduced to a mere pumping heart patient, with not much else going for you, except you are breathing, and technically, you are alive. You can sit there for a million years, or a million or so life times, before you begin to come out of it, and then reveal your disorder of severe mental disorganization, mental disfunction, and mental retardation. There is a big difference between a bonk on the head, and a train running over it, and the rest of your body. Coma patients are fully aware of what is going on around them, and they may not be able to speak, but they are there, and they can twitch a finger, now and then, or flex a toe, or raise their tummy up a tiny bit, to pass gas, usually, and relieve the bloating sensation they are experiencing in their tummy, and in their intestines, or colon. They may be able to grasp your hand, and fully hold on to it, and not let go, for hours, if they have the strength for it. This horrible torture the Lesbianists are perpetrating on comatosic patients, needs to end, now. Person responsible for continuance of hospital policies, despite our informing them of the truth regarding this, are to be shot and killed, and sent to my Epcot Center, if they interfere with the removal of the life support and life support assitive devices, that are plugged into the comatosic patients mouth, or nose, or other orifice of their body, or any part of their body. If some one refuses to cooperate, you are to throw them out of their hospital unit, and give them a good whack on the head. Come back in a few days, and then disconnnect their life support assisitive pumps, and tubes, and so forth, and shoot them in the brain with three 'fivers', as I've explained about, and then send them on their way to my Epcot Center. That is an order. Now do it.

I want you to pull the plugs on all the GI's and civilians who are on a breathing assistance machine, and life support assistance equipment, and I want you to send them all to my Epcot Center, where they can get treatment, and therapy, and then get themselves ready for being born, again, as a fine and a healthy, tummy baby to a tummy mommy, and to tummy daddies. You had better comply, if you know what is good for you, as my kids are now keeping track of your records on this account, and you are not going to do very well, if you do not follow orders. Is that clear. I will not have any insubordination of duty on my watch, and that means, you had better learn to follow orders, or you will be asked to jump over board, and then go for a very long swim to shore.

Michael Jackson

Michael Jackson is the biggest joke in the world. He is a white boy, and he pretends to be related to Janet Jackson, a black woman, partially, and they pretend to be related, and he is as white as an elbow macaroni, or a white goose. He is not a black person, though he does have some black ancestry, but he is a primarily white person, and he pretends to have bleached his skin color, which is a crock of shit. Now, I want you to kill that mother fucker, as well as Sylvestor Stallon, and Arnold Schwarznegar, Clint Eastwood, Morgan Freeman, Kirk Douglas, Matt Damon, Robert De Niro, Anthony Hopkins, Gary Busey, and their Lesbianists' buddies.

Retractions

Mr. Jerry Springer is not a Lesbianist. I was mistaken about him, as he was already killed by them, in a previous lifetime, as he developed a desire to bad mouth them, and they didn't like him, and they kicked him out of their group, and they killed him, with their murderous torture routines. Penelope Cruz is not a Lesbianist, but she was, but they killed her, and tortured her, and she is off the list. Angelica Huston is not a Lesbianist. She was, but they killed her, after torturing her. She is a popular and prominent person, and if she hasn't been abducted yet, by the Lesbianists who will feed her to my abominant kids, like they did to Steve Irwin, and Jeff Corwin, then they will be gettting around to it, not too long from now, as they like to feed her to the abominant kids of mine, just as they do Bill Gates, and lots of other, former Lesbianists. None of the Baldwin brothers are Lesbianists, either, as they were already kicked out, and killed by them, and then grievously tortured by them. They continue to be main attractions for feeding to my abominant kids. Jack Nicholson is not a Lesbianist, now, either, but he was. Ben Affleck is not a Lesbianist, as he was also kicked out of their organization, after they tortured and killed him. Charley Sheen is not one, either, but he was. Martin Sheen is not a Lesbianist, but he works for them, and he was one, before they kicked him out, after they tortured him, and killed him, in a previous lifetime. Michael Douglas is no longer a Lesbianist, either, as they killed him, after their brutal torturing of him. He is up for being abducted, and for being fed to the abominant kids of mine, as he is a prominent person, and Kirk Douglas enjoys watching him get eaten up, and Kirk Douglas will laugh his guts out, as he watches Michael Douglas get tortured by the Lesbianists, which Kirk Douglas is a confirmed member of. Cher Bonno is not a Lesbianist, as I was mistaken in memory, though she was a leader for a while with Oliver North, she was killed by them, after being tortured, because she was getting "soft". Sunny Bonno was a Lesbianist, as well, but he was also killed after being tortured, officially kicking him out of the members league of Lesbianists. Sunny Bonno was captured, and abducted, and a body double was placed on a coroner's table, and Cher Bonno knew that the body double who was dead, who looked like Sunny Bonno, was not Sunny Bonno. The Lesbianists subsequently fed Sunny Bonno, after they captured him off the ski slopes, to my abominant kids. Elizabeth Taylor was thrown out of the corp of Lesbianists, after they heinously tortured her, and murdered her, and the Lesbianists have her slated, scheduled, after they find a way to abduct her, for feeding her to my abominant kids. Dennis Miller is not a Lesbianist. Though he was one, after torturing him, and sushi-izing him, please see my notes on that, the Lesbianist's sushi-izing of Dennis Miller eventually killed him.

It's hard to keep track of some people, as to whether or not they are currently Lesbianists. Others, are not so hard to keep track of, and I want all of those mentioned, killed, immediately.

Captain Off The Bridge.

On Praying, Fucking, Sucking And So Forth

You are rewarded for praying Nam Myeo Ho Ren Ge Kyeo. You are also rewarded for fucking, sucking, tounging, licking, fingering, dicking or massaging your dick against a woman's bun bun, or inside of her butt hole, where there are lots of sensitivities buttons that get her clicking and eroteming and orgasming, or against her titties to get her eroteming and orgasming, and so on, and for palming or massaging a pelvital button, or the love and joy stick, the dick, or a love button or love patch, igniter switch, or whatever nerve sending touch sensitive love joy button there is embedded into your body, in the pelvis, groin, vagina, and in the musculatures of the groin, pelvis, and vagina, with the palm of your hand, and so on. You also get rewarded for throating a woman with your dick, as there are lots of love buttons in her mouth, and throat, lips, and so forth. Men also have love buttons in their lips, throats, tounges, mouths, butthole, and on their body, and those buttons also get clicking, and turning on and off, and sending sensitivities messages or signals, nerve pulses, up the eroteming nerval system and up the orgasming nerval system. You get rewarded for dicking men and boys in the throats, and in the buttholes, and their bodies, just as you get rewarded for dicking women. There is no discrimination in this area, and every one is equally rewarded for their meritorious acts of dicking others, women, girls, men, and boys.

Why are you rewarded for praying Nam Myo Ho Ren Ge Kyeo, and for dicking, fucking, and sucking, bumbeying, or moving your vaginal bumbey package against a woman's sexaling body parts to erotemize your self, and the woman, and for breasting your titties, i.e, rubbing your titties against or flopping them against and massaging them against a woman's butty butt or against her other sexaling body parts to get you and your friend sexually erogenized i.e., sexually stimulated, erotemized, and orgasming, and for other sexaling activities that help you and your friend and friends to produce purifying sexaling energies?

You are rewarded for your praying and for your fucking, sucking, dicking, and so forth, for helping to get every thing and every body going at the right pace in synch with every thing and every body else, for every body in my universe who is working for me, to keep them moving in harmony, perfectly meshed and in synch and in a timed persuasive mosture, with each other, so as to keep my universe standing up, strong, wholesome, robust, healthy, well, and fine. You are rewarded for praying as well as for sexaling, as you help move my children along as they do their work, as you pray and as you sexal and spray out energies from eroteming, from erotistically orgasming, and from sexually orgasmically convulsing, i.e., phlumetting, while you shatter out and spray out purifying energies in all directions, that will clearify and erase your karmic markups, and the karmic markups of others, all around you, for millions and more of miles, way out beyond where you are activiating and religialing, i.e., sexaling.

Your dicking, sucking, licking, titty massaging others, and so forth, will get wonderful and wholesome, GODLY, purifying energies shooting out of your bodies, and the energies shoot out at rates of speed that also help my universe to keep synchronized, and to move along at the right pace for it to be able to stand up and remain stable and solid, durile, strong, wholesome, pure, and a nice place to live in.

Every one who works for me, has a rate of speed they work at, a life pace, or life spin. We all have a pace of life. In some cities, it is fast and hustling. In some places, it is slow and whimsical. My kids work according to a rate of speed that is metered, and they keeps every one moving as best as they can, according to this metered pace. The metered synchronized pace that my children work at the rate of is one thirty seventh and one fifth, approximately, on the metronome.

If you help to push my kids along at that rate of speed, or a rate of speed that is close to it, as you pray at a metered synchronized pace and rate of speed, and as you fuck, suck, and so forth at a metered synchronized pace and rate of speed, then you are rewarded with angel dusts, or purifying energies faerie dusts that my kids daub on your head, and throw buckets loads of over your head and body and that they wash your insides out with and that they wash your body, inside and outside, with as they shower them all over you on the outside of your body, and all around in your body on the inside of you, which then help to clean you up and clearify your karmic markups, cleanse your karma, and purify your life, making you a shining, radiant, pure and holy being, though you may not notice at first, as we are too filthy, karmically speaking, to notice the changes, as our karma is too thick and mucky to allow us to feel the changes that are taking place in our karma and life.

I have a gradient scale for how close you keep people moving, and at what rate of speed you help to push them along, and as you help to push my kids along, so that they can do their work, you are rewarded, in accordance with my gradient scale, with more angel dusts or purifying energies for better preformance, and with less angel dusts for poorer or less effective performance. You have to do some thing that will help my kids move along at a metered pace, so that they can get their work done. Praying Nam Myeo Ho Ren Ge Kyeo sets off a time frame synch. A time frame synch is the metered click, click, click, of the metronome. This time frame synch or metered pace, that you achieve while praying, Nam Myeo Ho Ren Ge Kyeo, will help keep every one moving, at the right pace, if you pray it in a rythym and at a rate of speed that will synch up with a metronome at one thirty seventh and one fifth, approximately. Your efforts to help keep my kids working and moving at a consistent rate of speed, will get rewarded, thus for praying, Nam Myeo Ho Ren Ge Kyeo, you are rewarded, with purifying energies, that my kids dump on you.

Your efforts for fucking, sucking, licking, tounging, titty whipping or banging your titty nipple against the vagina of a woman or girl, dicking, fingering, palming, and so forth, all get rewarded, if you try to keep every thing in synch with the metered pace of the metronome at one thirty seventh and one fifth, approximately. The gradient scale also applies, of course, as you are fucking and sucking, etc., so the better the job you do of keeping your pace at one thirty seventh and one fifth, approximately, the higher your rewards will be. Your rewards are the same, more or less, for both praying and for fucking and sucking, and my kids sprinkle and dump angel dusts, purifying energies, on you as a reward. You also get markups that are meritorious, and you are rewarded with a better and happier life.

Further, when you are orgasming, and eroteming, or pushing out energies as you orgasm, and erotem, you will be pushing out energies that shoot out at consistent rates of speed. These rates of speeds of these energies are in concordance with our pace of life, they all perfectly mesh with the paces of life that my kids keep. The energies as they pass out, and push along through time and space, at synched up and consistent rates of speeds, all help to keep my kids moving along as they do their work and tasks, and they all help to keep our universe, standing up, strong, healthy, wholesome, well, and fine.

Chaos breaks the legs off the foundation to our universe, and our universe begins to creak and moan, as it begins to crumble, slide, twist, and tumble downwardsly. Making chaotic noises, and chaotic movements, detracts from the harmonics of our universe. Your breaking glasses, and breaking skulls, and legs, and arms, are also chaotic events producing, in most cases, and they will detract from the perfect synch up of our universe, as leg bones and arm bones, skulls, fingers and toes, begin to splinter, as you apply pressures to them, you get negative markups for your actions. A record is kept of every chaotic action you take, or make, and if you make enough chaos, in your lifetime, and in your following lifetimes, then you will suffer from your poor records of performance for keeping my universe standing up, wholesome, healthy, happy, and well.

Every scream you cause to be vocated or vocalized, is recorded, and the intensity of the scream, and yell, and crying out in pain, plus a lot of other factors involved, are all recorded by my kids, and you get negative marks for that kind of performance.

The love making oooohs, and aaaahhhs you cause to be vocated, are harmonic appeals of soothing restfullness to the spirit, and to the mind, are also graded, and you are graded on how well you can cause others to produce them, and your scores are kept, and if you are a lousy performer, with more negatives than positives, you'll end up with a lousy life, as a result, as you are rewarded in accordance for your positive performance, as well as for your negative performance.

Helping to keep all of my children working in harmony, and doing their jobs and tasks, at a metered pace, will be rewarded, not only with angel dusts, but also with a better life with more positive fortune, as you recieve positive points or merit points for your collaborating with my children, and working to support them, and more fun as your life becomes graced with more positive merits and as your rewards begin to pile up, and more good things begin to go on in your life.

If you sit on the side of your chair and have a pair of drum sticks, or are using a bongo drum, or calypso drum, with the long tube belly, or stack, a long barrel tubed drum, or if you sit at your drum set, or set up your electronic drum pads, and begin pounding away, in a syncopated manner, for your pleasure, just drumming away, with no notion in mind as to any thing other than achieving a nice rythym for you and your friends to listen to, if you happen to be with friends, your merit points will be near zero, and your efforts will not rate on my gradient scale, as your actions will not be in accordance with my program for a better universe for all people, and for my kids to live and work in.

If, however, you have the attitude, "I wish to support John's kids, and syncopate myself while I'm drumming, so as to be supportive of John's kids, to help John's kids work in a syncopated manner, doing all I can to support John's kids", then, your merit points as you drum, will go sky high, through the roof, and you'll get meritorious benefits for your efforts, or merit points, and good marks, for your efforts. It's like helping kindly old women, who are frail and in need of a helping hand and support, cross the street. If you act in a kindly and charitable manner to help support those around you, you get meritorious points for your efforts. These efforts of your's, however kindly, regrettably, though they are kindly efforts, are not the kinds of efforts that we need, my kids and me, need to keep my universe standing up, and moveing strongly. For efforts that support my kids work environment, and that lend a hand to them to help them to get their work done, your meritorious efforts marks will go through the roof, and you'll be blessed with angel dusts, i.e., purifying energies that help to clean up your karma, and erase and clearify your karmic markups, or marks that record your bad and cruel, or negative actions towards others, and towards your self. You can kill your self, and cause grief to others, as a result of your departure, to my Epcot Center, and that rates negative marks and negative points markings or markups for you.

When you try to do any thing, that will help to syncopate my children, and to make my children's working environement more syncopated, and rythmical, with your concentrated mind, and determination to make that a reality, in other words, a prayerful attitude in mind, hoping to make John's children's working environments syncopated, and rythmical, and in rythym with every one elses', i.e., all of my other kids' syncopated working environements, then with that attitude of hopefulness, or a prayerful attitude, than, you are rewarded for your efforts, and determination, and as you drum away, or pound and beat on your calypso drum, or on your metal Bahamian or Tinian, or Haitian, or Jamaican, drums, or on your dresser drawers, if your mom does not mind, as you pound away, keeping your mind set on your determination to keep all of my kids working in unison with each other, and helping them to keep in syncopated harmony, all in perfect flux, and perfectly meshed in timing, with every one else, as they work for me, then your rewards and positive points markups, will be very high, and you'll be rewarded by my children, with angel dusts that they daub on your forehead, and dump all over you, from their barrels they carry full of angel dusts, or purifying energies to clearify your markups from your karmic markup piles, kept inside of your body, kept in storage in the molecules.

Your markups are inside the molecules inside your body, but they are also out side of your body, in every molecule, nearly, going way out to the very farthest edges of my universe. We will eventually get to all of them, and purify or clearify and erase all of your karmic markups, the notations and records that my kids keep on you, and on your activities, and eventually, we'll get them all, and your life will then be full of grace and happiness. It will be a long time before we get to all of them, as you and I and every one in my universe, have been here, and enormous length of time.

As you drum, or skip, or dance, or do areobics, in syncopation, with the attitude that you want to keep all of John's kids in step, and in synch, and in unison and harmonicly meshed and in perfect flux with each other, or perfectly meshing with each other, and every one else who works for me, whether you drum, skip, dance, or do areobics, it does not matter, if your mind is set and determined to help my kids, with your efforts, you will be rewarded for your efforts, no matter whether you skip, jump rope, dance, or areobically excercise.

As you sexalate, if you keep in your mind that you wish to keep all of John's kids in syncopated harmony, perfectly in flux, and in unison, just as when you are drumming, or skipping rope, or dancing, or playing basketball, or playing tennis, or badminton, or any sport, with your movements all timed, and in perfect syncopation, when you sexal with the right attitude to keep John's kids in synch, perfectly meshed in perfect accordance and flux, with each other, and with every one else, you will be rewarded grandurally, that is, grandly, or in a grand or very great manner.

Excercising And Activiating To Music Timed To One Thirty Seventh On The Metronome

Music timed to one thirty seventh on the metronome, and one fifth, or as close to one thirty seventh on the metronome that you can get, is okay, and it will help you to dance, play tennis, play sports, do areobic excercises, and other types of activities, at that pace that we need to keep to help keep my kids working smoothly, and you'll be graded on your performance, and on your attitude while you are dancing, or excercising, and the more intently you concentrate and use your mental energies and mental control to stay in synch, and in step, the better will your scores be, and the higher your marks, and the greater your rewards of purifying angel dusts and purifying energies that my working and unionized kids will pour and spread all about you, inside and out, and all over you.

Sexaling itself is a religious act. Yes. That's true. But, if you sexalate with this powerful prayerful attitude, or hope in mind, with your determined mind, and your concentrated mind, as you sexalate, and help others to sexalate, and help others to erotem, orgasm, phlumett, and shatter off wonderful energies from orgasming, eroteming, and phlumetting, your positive points and merit marks, and many other types of scores my kids keep on your efforts and behavior, all of them will go higher than any one can see, way out beyond the furthest galaxy that you can possibly see from your bedroom window, with your telescope. They'll go out to the futhest edges of my current univerese, and even beyond the barrier walls, holding up our universe, that my kids put in, to keep our universe standing up, stable, strong, and durile or durable and with tensile integrity.

Any action for helping my kids do their work, syncopated, and in unison, and in harmony, will be rewarded, with angel dusts, and with positive marks and score points in your records that we keep on you and every one else in my universe. Your sexaling actions get rewarded, far more than any other activityating, as your sexaling actions are the most needed actions, to keep my universe, pure, durile, holy, sacred, free from negativities, healthy, wholesome, stable, and constantly in a state of improvementing.

Most people go around destroying things, and causing chaos. We, my kids and I, need people who are going to help improve the wonderfulness of our, my, yours, my kids, and all of my other kids, wether they work for me, or not, meaning, all of my guppies, who are like you, my relatively normal kids, as well as all of my abnormal kids, the abominants kids I've got, that go around thinking it is funny to eat people, and to pull them into their mouths, and crush them in miserable pain and agony, like my elephants abominants kids do to relatively normal human beings kids of mine.

Fisting And Punching People With Your Clenched Hands And Crasping Or Clasped Knuckles

You all have been bad kids, all of my guppies, all of you who do not work for me and go around thinking, 'Oh, gee. Aren't I special.' My guppies are these minded people, who are arrogant, who talk back to their mama's and to their papa's, and to their relatives, and brothers and sisters, and to their friends in school, and to their teachers. Later in life, they become worse, and they talk back with their actions of being mean to each other. As my guppies grow older, and become older people, they start fisting others, and that means, punching people, hitting them with their clenched fists and hard knuckles, and hurting them when they pound on their face, or on their stomach, or on their body some where, and break bones, and tear muscles, and stretch ligaments with their pounding each other.

Phlooching Out And Fisting The Vaginal Cavity, Rectal Cavity, And Mouthal Cavity

Fisting is a word used by some people to mean, to insert your hand into the vagina of a woman, and gay people, homosexually driven people, fist each other in the butt hole, if either men or women, or in the vagina, if women. Some people find it interesting to fist each other in the mouth, by sticking their fist inside the mouth of a person, pretending it is a dick or a dildoe. You need to phlooch out the neck muscles, and billow them up, or poof them up and out, and that will help them to gently relax, and then become expandable or stretchable, as when they relax, they will easily stretcth out, and there will be some give, or freedom of expandingness. The neck muscles then become easy to stretch and push on from the inside with out hurting the person. It then is easy to insert your fist into the throat, to massage the inside of the throat, and to use your hand, or fist, to tickle the igniters, and triggers that set off love buttons and bells, and whistles, that help women and men to erotem, orgasm, and phlumett.

Fisting by inserting your fist into the vagina of a woman, when it is relaxed, and after you've massaged if for many hours, and after it begins to billow out, or poof out, and then open wide, and then you can see inside of it, and from the entrance of the vagina, there is a clear gaping cavity, you can then insert your clenched fist hand into, to massage the inside of the vaginal cavity. Doing this is very nice, and is very exciting to do, to help women and girls to erotem, orgasm, and phlumett. You can phlooch out the butt hole, by massaging it, for several hours, and it will begin to poof out, and expand, and you'll see a nanny gate face on it, and that means, it will begin to look a little bit like a vulva, or the vagina of a woman or girl when at rest, or exposed between a woman's or girl's legs as she is sitting or relaxed with no panties on or with no or few clothes on and nothing covering her hips, pelvis, lower pelvis, pelvital ridge, crotch and groin, butt and butthole and lower back, there by exposing her butt and vagina. If you compare a vagina with a phlooched out butthole, you will see they resemble each other, slightly. There is no vaginal cleavage of course, around the butthole, but there is a slight resemblence between a phlooched out butt hole, and a vagina, or vulva, none the less.

The Vagina And Vulva Compared To The 'Nanny Gated' Butthole

What is the difference between a vagina and a vulva? They are more or less the same, but the vagina includes lots of parts, inside as well as out side. The vulva is outside, basically, only, as far as I understand and remember these things, now. When you massage a butthole, long enough, it will begin to look like a vulva, or vaginal face. That's called the nanny gate, or on the male, the male butthole vagina, as I've spoken about it, before. On the woman, it is the female butthole vagina, a double 'immitation vagina' for the real one, as I've mentioned. Men's and women's buttholes are the same, and they both look like 'immitation vaginas' as I've also mentioned, after you phlooch out the butt hole of either the female or of the male. Once you phlooch out the butthole of a man or of a woman, it will poof out, and expand, and the butthole entrance and cavity will become relaxed, and easy to insert your clenched fist into, to then push up your fist into the butthole cavity, and massage it, once the person has cleaned out the butt hole cavity and once it is clear and free from debris matter, or food matter, and rotting food particles, and fleshy foods, or hamburger meat and so on. Phlooching out the vaginal caivity takes a little longer, but with patience, you can phlooch it out, and then fist, in this manner. If you phlooch out the butt hole, and rectal cavity, you can fist your male friends, and your female friends, and every one, once they have cleaned out their poop hole, and made it free from rotting debris, will enjoy mutual, and reciprocal, fisting. Fisting in this way, for sexaling, is alright. Fisting in the other way, for beating people up, is not nice, and you are given poor marks for your actions of nautyness, meaness, and cruelty towards others.

Over the long course of time, you all have been naughty at one time or another. I have many ways to fix you, and to retrain you, and to rehabilitate you, but you always go bad, and sour, again, as that is your main drive, or driving internal force in your lives.

The Importance Of Kindlyness And Teamwork

Why have all of my guppie kids all gone south, or in other words, gone down the road towards unkindlyness? Because, as I've explained, you forgot what the Love Of GOD is. My religion will help people to understand what the Love Of GOD is, and that will help keep them on the correct path of kindly actions towards others, and it will help them to understand and remember that teamwork to help my working, unionized kids to keep our universe healthy, strong, durile, standing up, stable, a safe and happy place to live, and a wonderful place to live, is very important.

Doing things that support my kids working efforts, will be rewarded, and doing things that detract from the harmony and syncopation of the metered pace of my kids who are working, and that slows them down, and that causes dischordance, will not be favorably rewarded, and you'll become a female schmuck, or a male schmuck over the length of time, as you live on in my universe. A schmuck is an unlikeable person. Sexaling is the most important thing there is for us to do, other than feeding ourselves correctly to keep us healthy, and excercising, and leading a balanced, well regulated life, listening to your mama and to your papa. My religion is based on sexaling, as sexaling is the most holy and pure activity we can participate in, or do by ourselves.

All the bullshit propaganda of the Lesbianists, that Jesus said this, and that Buddha said this, and that God will save you if you do this, and so forth, is pure balooney, bullshit, and made up nonsense. I, GOD, will not do any thing for any body, unless you help me and my children to make this universe, a more kindly, and a more wonderful and prosperous universe for all of us. If you do, I will have my kids, bless you with angle dusts as they daub them on your forehead, and then pour barrels of angel dusts over you, as they dump barrels full over your head and body, for your extra good work, sexaling, in syncopation, with my kids working rythyms, and in rythym with their syncopations, flux, and their phenomenal elegance.

Phenomenal Elegance

What is phenomenal elegance? It is their keeping harmony with each other as they work and keep every thing in order, in my universe for me, GOD.

You can not escape from this reality of your good actions and your bad actions being recorded, as my kids keep records on every one, and we make certain every one is rewarded for their good actions, and we make certain that every one recieves as close to what they deserve, to help balance things out, in accordance with their markups, for their bad actions. If they are bad, they will not meet nice people, and they will meet naughty people, and not so nice things may begin to happen between them. If they are good, and if they try to help my kids, as I've explained about, they will get rewarded, and they will slowly begin to break away from keeping company with bad people, and they will gradually ascend to higher rankings or status, and then they will begin to lead a better life, and they will begin to escape from meeting with bad people, and the good kids' lives will become blessed by my kids, as my kids begin to sprinkle angel dusts on the good kids, and daub the heads of the good kids with purifying energies, and then dump purifying energies all over the bodies of the good kids who listen to their mama's and papa's, and sexal with them, and as they sexal with their mama's and papa's, and sisters and brothers, relatives, neighbors, and others, the good kids help my kids keep this universe running smoothly, in harmony, in flux, perfectly meshed, and in perfect syncopation. Mama's, papa's, sisters, brothers, relatives, neighbors, and others, all get their heads blessed with angel dusts, purifying energies, for their good actions along with the good kids, you, I hope, of course, too.

Plurlbalescent / Plurablescent Nature Of Negative Punishments And Positive Rewards

This is very important for every body to understand. I have my working, unionized kids reward the good people, and I have my working, unionized kids keep records on every action of every one of you, and I have my kids make sure the bad kids, meet with what they deserve, or some thing close to it, which may not be too nice, most of the time, and I have my kids make sure that the good kids, all meet with what they deserve, or something close to it, and that is usually always something nice. It may sometimes not be something conspicuously nice, but it is nice, usually, or positive in nature, always. The bad kids will get rewarded by something that is negative in nature, always, usually, or plurlbalescent. What does plurlbalescent mean? It means, it might not be noticably negative, but it is still negative, in nature, in essence. This is a topic we can discuss, another time, or you can ask my kids for more information on it, when you go in and visit them, with your mama's and papa's, sisters and brothers, relatives, school teachers, principal, costodians, janitors, school workers, and others.

We have had too much chaos of late, and for quite some time, and it is now time to slow it, and bring it to a halt. We are going to produce positive harmonic concordances that will assist my kids as they work, and that will help them to stay working in harmony with each other, with your fucking, sucking, eroteming, orgasming, your shooting out of purifying energies as you orgasm, and erotem, and with the increase of the oooohs, and aaaahs, you help to produce, with your practice of my religion.

We have to bring an end to the moronic violence of the Lesbianists. If that requires a lot of my children, making lots of babies, and lots of energies, and percussive forces, when you set off a fracturable rock bomb, then that is what it will take, as you blow Washington DC and the Baltimore metro area off its ocean ledge, and into the Atlantic, with that fracturable rock bomb, if it is big enough. Yes, there will be lots of painful, ouches, and screams, and so forth, but it is trite, compared to the violence these idiots have been perpetrating, over the long span of time that they have been in my universe.

We have been here for a very long time. It is nearly impossible to figure out how long, other than with mathmatical computations. Our brains will burn out, if we try to figure it out in our heads. It does not matter how long we have been here. It does matter what we do while we are here. You are not going any where else, and you are all staying in my universe, so you will all drop your pants, and your dresses, remove your shoes, socks, clothes, underwares, panty hosees, and panties, disrobe, and begin helping others to make lots of ooohs, and aaaahs, and lots of eroteming and orgasming energies. That will be the begining of your getting into line with the rest of us, here in my universe, my kids who work for me. As you eroto with each other, you'll get graded on your performance, and you'll get paid by my kids, once you join our country, as I've explained about, before.

Timed Persuasive Mosture

What is a timed persuasive mosture? It is just keeping every body in synch with each other, persuasively and accurately moving along, orderly, in an ordered fashion or manner, and with every body in rythm and syncopated with each other.

Mosture is a type of motus, or motion or fluidity of movement. The timed fluidity or fluidness of my kids working along in synch with each other, is critical to having every thing in my universe, standing up and sturdy, with every thing holding together, as it should be. Otherwise, if my kids and their work get out of synch, things can come crashing down, and things can come falling apart, and we do not want that.

This is a big universe, and we have a lot of people in it, my kids, and you wouldn't believe how many kids I have. Anyway, they all have to stay in syncopated, fluid motion, with their paces of life perfectly meshing with each other's paces of life, to accomplish their jobs and tasks, in an orderly, and in a fluid movement, harmoniously, and without delays.

The persuasiveness is accomplished with the help of your sexaling, and by your keeping pace, and synching your sexaling activities, and the movements involved in your sexaling activities, and by your spraying out your energies, as you erotem, orgasm, and phlumett. The persuasiveness is also accomplished by your keeping pace in unison with others while you are praying the syncopated phrase, Nam Myeo Ho Ren Ge Kyeo.

Every thing is timed, and so as you activiate, or carry out these activities of sexaling, eroteming, orgasming, phlumetting, as well as the movements involved in sexaling, and as you pray, your synching of your movements and sounds in time and in pace with the syncopated and metered metronome click, click, click, at the timed pace of one thirty seventh and one fifth, on the metronome, approximately, helps to persuasively move, or persuasively drive and push, every body about, and along, as they do their work for me, in their many syncopated paces of life, or life spins. I have many children working at different life spins, as I've mentioned before, and each group of them has a different pace of life, or time spin. Your activiating, as explained, helps drive them along, each at their own pace of life, or time spin, perfectly meshed with every other child of mine, also in his or her, and at his or her own particular time rate of speed, time spin, life spin, or, pace of life.

Every one and every thing must move along in perfect flux, or perfectly meshed with every body, and with every thing that is going on in my universe, on every possible level. There are many levels where activities are going on, and many people are working at different life spins. Every one, no matter what level they are on, and at no matter what life spin they are living at, must stay in flux, perfectly meshed and in perfect harmony, perfectly syncopated with every one, else.

You are rewarded for your helping to move my kids along, in perfect flux perfectly meshing with every one and with every thing that is going on in my universe, with your efforts at sexaling, and with your praying, as explained, earlier.

In our new society, which we will create, you will score earning points, and every thing you do, as you sexal, and so forth, and as you pray, is scored, and a record of your capabilities, or excellence, or lack of excellence, is kept. You are paid according to your work performance, as you sexal, activiate, pray, erotem, orgasm, and phlumett. Also, you are graded on how well you get along with others, and on how well you try to harmonize and then sexalate with others. You score earning points, accordingly, and you get paid, according to how well you perform.

Keeping Every Thing And Everybody In Harmony And In Synch

Explaining how this works, how praying, fucking, sucking, dicking and hugging, etc., helps keep every thing in synch and in harmony and how your efforts are rewarded, is a tiny bit more complicated than my simple explanation, but that is it in a peanut shell.

For those Lesbianists hiding among you who do not wish to surrender, you Lesbianists will find we are not going to be acting kindly towards you. All of you Lesbianists, where ever you are in Washington DC, or hiding underground, or in Paris, or in Rome, Peking, and so forth, you will be dealt with harshly, as we need to put a stop to your activities, and a "maybe" is not acceptable in this case. We are not going to allow you to continue your chaotic, nonsensical, violent activities one moment longer, and we will blow you up flying high up into the sky, and off the ocean ledge down below you, in Washington DC, as we sink your Washington DC area into the ocean, along with all of Northern Virginia, and the ocean coastal area of Maryland and Baltimore, along with large parts of the states of Virginia and Maryland, out to West Virginia, as that area settles down into and below the waves of the Atlantic Ocean, after we bomb it with one or more of my fracturable rocks weapons for mass removal of Lesbianists from the face of the earth and from their hiding places under the surface of the earth. The Lesbianists in the Washington metro area and hiding under it, had all better surrender to my kids, or they will all get their pants and clothes blown off and shredded from their bodies, if they do not, as they are given a free ride out and up into the upper atmospheres of our planet, and then, beyond. All other

Lesbianists had better surrender, too, or they risk getting a free ride out, as well.

Deep Sea Ocean Trench Off The East Coast Of The United States

There is a trench that extends south wards from Washington DC, some times reaching 25 miles out in some places, and in other places, it reaches out to eight hundred miles from the shore. In the north, it reaches out in some places, 85 miles out to one hundred and twenty five miles out, to three hundred and fifty five miles out, to eight hundred miles out in some places, in the south.

It is fifteen miles deep when you go out forty five miles off the coast from Washington DC and from the Chesapeak Bay. The ledge bottom is found about three and one half miles down, and the mouth of the opening continues for ten miles, approximately, downwardsly, on the western side of the trench. The It has a gaping mouth, and it opens up and lets ocean water inland, under the continent, eighty five miles down below Washinton DC, three to six to eight miles wide, from top to bottom, from the underside of the top of the mouth, the bottom of the ledge, to the bottom of the mouth. From under the nation's capital, to the south, it travels to over eight hundred and eighty five miles. To the north, it travels three hundred and thirty five miles, to six hundred and fifty miles, to about nine hundred and fifty nine miles, inland under the continent, depending on where you wish to locate the edge of it under the continent, northwardsly. It travels to the west, inland, three hundred and thirty five miles, to just over eight hundred miles, depending on where you find the edge of it. It travels inland further westardsly, the further you travel north. It is slightly over one thousand and eight hundred miles from north to south, in total, as you'll discover, once you explode enough, and after you explode large enough fracturable rock bombs, over Northern Virginia, Maryland, Washington DC, Baltimore, covering the metro area vicinity.

The U.S. Navy, and the U.S. Coastguard know about the trench, or parts of it. They are not allowed to discuss it with anyone. No one is allowed out there, to research it as it is off limits to just about every one. Some navy personel of high rank, and coast guard personel of high rank, are allowed out to take soundings, every now and then, with their Lesbianists' staff members, and Lesbianists' personel in the Navy, and in the Coast Guard. The Soviets, at least, Boris Yeltzin, Vladmir Putin, Mikhael Gorbachev, and Zelda Gorbachev, know about it, and so do all the other Lesbianists. They can confirm it, if they wish to play ball with me, and if they wish to save their asses, after they decide to surrender to my children.

The Shelfs Systems And Trenches Systems

The shelf estends to under Lexington Kentucky, at about ten miles below it. It is five miles up under Chatanooga Kentucky. It is five miles below Washington D.C., in some areas. It is three miles below Baltimore Maryland, in some parts of the city. It is eight miles up below Pittsburg, Pennsylvania. It is fifty five miles up below, or under, West Chesterfield, New York. It comes up to eighteen to thirty miles below McLean Virgina. It is eighty eight miles below Norfolk, and the mouth, downwardsly, is five to ten to fifteen miles wide open, in a downwardsly direction. It some areas, it can be found below Ohio, and under Indiana. It crosses under the West of Kentucky, and into the south of Illinoise, five to ten, to thirty miles. It is a variegated trench system. It extends to Tennissee, parts of North Carolina, Mississippi, Alabama, Georgia, South Carolina, and to under parts of Northern and Western Florida, and is open out and into the Gulf of Mexico. The whole area of Eastern U.S.A., is sitting on an open shelf, trench system, and there is water passing below it, and out into the gulf, in several areas, over to eighty five miles west of Corpus Cristi, Glen Garden, population eight hundred and fifty, which south of Galveston, and north of Corpus Cristi, between the two cities. There is a mouth eigty five miles south of Tampa Bay, Florida, in the Gulf of Mexico. There are several openings or mouths to the underground fault line system, and deep sea ocean trench system, and shelfs systems, and water is passing from the Atlantic to the Gulf of Mexico. There is also a trench system in the north, under Niagra, that extends southwards, several hundred miles, and it has many branches to it, and it extends into this system of shelfs, trenches, and under continental water flows.

Side Bender Currents

What is a side bender? It is a current comeing out of the mouth of an opening, from under a continental shelf system, that allows waters to flow out. As the water flows out of the mouth, the outlet current of water, it flows very forcefully in an outwardsly direction, and it pushes the water out with great force, generally. If a submarine is traveling in the vicinity of a side bender, the submarine may get hit broadside, and that will often turn the submarine topsy turvy, and around facing the opposite direction it was traveling in, or another direction, not the one it was traveling in, most often. The crew will get swung about inside the submarine, and they will fly through the cabin, and pounce off the floor to the ceiling, and hit the ceiling, and then hit the sides of the corridor they were walking along in, and finally end up on the floor when the submarine rights itself, with its balast, and you'll get many sprained or stretched ligaments, and broken bones, arms, wrists, fingers, legs, knees, ankles, feet, toes, necks, backs, hips, spinal injuries, and other injuries. It can leave a crew of a submarine nearly one hundred percent, injured and in a ship's hospital, or a Navy or military hospital for recovery. Side benders are often called upwellings of currents by the Navy, but that is not generally the case as they are not upwellings, but they are side pushing currents, that come flowing out from under continental water flow openings, horizontally. There may be some upwards lift involved, if there is a reason, such as a mouth is angled at a slight sloping angle, as it releases the flowing waters out from its tube like cavity or hole.

Crew members and military passengers of Naval submarine vessels are generally told not to talk or discuss any thing about side benders with non Navy persons, and with persons unrelated to their ship or unrelated to their ships voyage, as the governments of the world, do not want any one to find out about side benders, and they do not want people, geologists, marine geologists, undersea deep sea ocean studies researchers, or others, to research and investigate side benders. It's a big secret, these side benders, and that's what the marines, and the navy personel are sworn to keep, or face a fireing squad, on insubordination, or on some trumped up charge of spreading naval secrets, acting as a foreign spy and receiving money, or something like that. Naval personel will generally obey orders, and not discuss side benders, or other 'secret' information, with any one, as they risk losing their job, and they might face a fireing squad, or a hanging patrol, sometimes called a marching platoon, or a hanging platoon, a group of soldiers commissioned to carry out orders to hang some one who is in the military. If you pay a naval officer or enlisted person, or other person with Naval submarine duty, such as some marines, and others, enough money, they may be willing to share some information on side benders, and information about what they know about side benders. Some persons who have had Naval submarine duty, may genuinely not know any thing, such as crew members who are never assigned to submarines that travel near side benders, on a regular basis. Some times family members of enlisted persons and of Naval officers, are allowed to travel on submarines, for fun and excitement, as a special reward for their papa's or mama's duty on a submarine. Some of these family members have also had some experience with side benders, such as those who have traveled on submarines along the Marianna's trench, or other trenches, not listed, neccessarily on global maps, but none the less, which are there, and that are near shelfs systems under sunken continental shelfs, or under sunken continents, but that eject streams of water, nonetheless.

Our maps and globes of the world are incorrect, the ones we buy through bookstores, or from map publishers, as nothing that would indicate sunken continents, large sunken islands, and related trenches, or other related features, are not going to be indicated on them. The Lesbianists do not want you to find out information that could provoke you into researching, under water features, that they do not want you to know about, as your fictious understanding they have taught you, of the surface of this planet, and its history, is bogus, and any thing that would conflict with that, is certainly not going to be indicated on a map they would publish, and the map will be wiped clean of all traces of any thing that conflicts with the 'global' history of the earth, as the Lesbianists teach it, in geology courses for high school students, and below, and above. The global geological history they teach must coincide with their fictious propaganda about Adam and Eve, and "Lucy" the ape woman, the supposed mother of all people living on this planet, and about this earth being only 9 billion years old, or thereabouts, which is a bold faced lie, and other such bullshit notions they have fed every one to swallow, and have forced them to accept, and that they force people to use as primal notions to base scientific research on. The geology of our planet is much more complex than the Lesbianists are letting on to, and there is much to learn about planetary geology, as these planets have been around a very long time, and many things have happened, over and over again to them, and many things have happened to our 'solar systems', and star formations, and star systems, that people need to know more about, to get a realisitic understanding of our universe, its history, and its many complexities. In time, we will learn much more about all these things, and you can attend courses that my children have set up for every one, to teach people about our universe. You need a day pass to visit, as I've explained about, before, and then you should swear in, and become a citizen of our country. We have yet to declare this planet ours, but in time, we will, once we have finished and put an end to the problems associated with the Lesbianists, all of their shenanigans, and their malarkying around. One day we will declare this planet ours, and my kids will take charge of everything, and they will appoint people to posts of duty, and to positions of responsibilities.

Making A Large Swimming Pool

People should begin moving off and out of the area, around the Nation's capital, Virginia, Maryland, Pennsylvania, West Virginia, and North Carolina. We'll have a big swimming pool there, with lots of, mostly uninhabited, tiny islets, or hill tops and mountain tops, after all of the current residents die, and pass on and transel over to my Epcot Center, after one of our compatriots, or groups of them, detonate enough of my fracturable rock bombs. People will have to watch out for hungry sharks, after they swim inland, above the sunken landscape, looking for corpses to eat, and to scavenge, as lots of Lesbianists' corpses will come floating up from underground hangouts and cities of the Lesbianists, under those parts of the U.S., and from under the Gulf of Mexico, from under the sea floors of the Atlantic, from under the Niagra trench systems, and from under other trench systems in the Eastern U.S. This is not a joke, by the way.

Stagnasis

Salts kiddies in stagnasis is when the salts kiddies are in their salts kiddies crystals cages, in a hibernative state, in perfect equilibrium, to keep them alive and well, for as long as possible. Salts kiddies crystals cages sciences help you to understand many things about how things work in nature. Please read over my notes on my bulletin board.

Black Powder 'String' Fuses

Take a spool of sewing thread, and use Elmer's glue to coat the string, and run the string with a thin layer of Elmer's glue coated on it, through a bucket of black powder gun powder, which you can order in the mail, over the internet, or pick up at an antique musket or old style 'cap and ball' musket rifles and pistols retail stores.

Elmer's glue and gunpowder will combine to form a minor plastiques explosive, after the salts kiddies mix it up, eat each other up, pee and poop out lots of stuff that is highly explosive, as they get busy making babies, except when gunpowder is used in large quantities with Elmer's glue, to form a major plastiques explosive. Benzine will help this along, with diesel fuels, as well, and with chlorine, we can see some major plastiques explosives in the making, as mama's and papa's begin making lots of children, as they begin mixing it up, and as they all begin pooping and peeing out body fluids that is food for others, that will contribute to the powerfulness and explosiveness of the mixture.

After you make your string fuse, and let it dry out for a couple of weeks, then coat a rag or muslim cloth in oil, or grease, or a mixture of turpentine, gasoline, diesel fuel, and grease, with benzine, and make a paste, and use that paste to coat a thin cloth, such as a muslim cloth, and then let that set and dry for a few days, and then wrap a few sets of 'string fuses' together in a bundle, and place them inside the cloth. It will become a very powerful explosive, in itself, the more gun powder you use with it.

Test it, to see how fast it burns once it is wrapped in a cloth coated with a mixture of grease and fuels. The thicker the grease, the slower it will burn. The thinner the grease mixture, by adding more turpentine, or benzine, or paint thinner, the more rapidly the fuse will burn. You will have a very powerful explosives cocktail, with this mixture, so be careful. You have to be very careful with what you combine, as you'll be bringing together very explosive elements, when you mix these fuels and liquids together with gun powder on a string.

A few string fuses, wrapped in a well soaked cloth, with a mixture of these liquids and the axel grease, will make a type of plastique explosive, that can be used as a shape charge, or a mouldable, or shapeable, explosive, that is good for blowing doors off hinges, such as at pharmacies, or banks, and for blowing locks on private homes' fences to pieces, such as can be found at the White House, at 1600 Pennsylvania Ave. Washington, D.C., at the entrances and exits gates of the White House where guards are on constant duty patroling the area for security purposes. An initial explosive, a detonated fracturable rocks bomb, small in size, may cause a concusive force to cause the guards to black out, and pass out, and then sleep for a while. Be very careful with the size of the bomb, as we do not want to level the homes and buildings surrounding the White House, or across from it in Layfayette Park. After you put them to sleep, with your initial blast, you can test the shape charge on the nearby fences, at the White House.

Black Powder 'Cap And Ball' Pistols

Most black powder cap and ball pistols and rifles, muskets, sellers and retail outlets can be found on the internet, and some gun shops carry black powder, as well as the detonating fireing caps, for black powder rifles, and pistols. Many of them do, and you can purchase the black powder and copper detonating, ignition caps, for useing in your cap and ball pistol, or musket, or other, more modern, hunting rifle, that allows you to use black powder, and detonating copper caps that slip on a small round fireing ignition nipple that is made out of steel, and has a hole in it, to allow the percussive explosives in the firing copper igniting cap to ignite on impact with the hammer on the weapon, when it slams down on it, and the flames from the igniting explosives mixture, glued to the inside of the firing copper cap, then ignite the black powder, that was rammed down the barrel, or packed and tamped down in a cylinder of a percusive black powder cap and ball pistol. The caps are fairly useless, unless you wish to add them to a fuel oils, chlorine formula, and let them sit in the fuel oils mixture, and that will help develop plastique, as well.

Higher Temperatures Develop More Useful Energies For Making Babies

The copper in the cap will also allow for a higher temperature in burning, when the fuels mixture ferments after a few weeks. Magnesium in the cap as well, will also help to raise the burning temperature of the fuels mixture, and with some black powder added, and with some chlorine added, your plastiques recipe will become even more useful. These higher temperatures will help to produce energies that will be conducive to baby making among the fracturable, or rupturable, and percussive, rocks radiological salts kiddies. You can then add a handful or more of powderized amethysts, or turquoise, that you can purchase in bulk, on Ebay, for some small bulk quantities, and also emeralds are useful, as they all have fracturable rocks kiddies embedded in them, and fast asleep, in stagnasis.

Zircon Diamonds, And Other "Radio Active" Gem Stones, Etc.

Zirconium is a mineral that they use for the fake diamonds they sell with the trade name, Zircon diamonds, or Zirconium diamonds. You can powderize them, and use them for a good amount of fracturable rocks explosives, large and fast family making, salts kiddies, for a 'nuclear' party, and a send off to the eastern coast of the United States, before it is blown off the coastal ledge it sits upon, and then sinks below the ocean waves, if you strike it hard enough, with one or more of my fracturable rocks babies making, "nuclear" salts kiddies bombs. You'll need a few handfuls of Zicon diamonds, powderized, to make a nice fracturable rocks, babies making bomb. You can mix turquoise, emeralds that are mined and sold in bulk quantities on Ebay, amethyst, and the other rocks that I've mentioned, along with powderized 'sand' from the beach. Argentina, and Venezuela, Baha, and Southern California are good places to collect useful sands, full of fracturable rocks, salts kiddies, that a geiger counter will detect, if it is a sensitive enough geiger counter.

Geiger Counters And Their Usefulness

They are not too hard to build, but you will have to look in your Popular Mechanics magazines, for the details on how to build a "geiger counter". Some mining stores, and mining outfitters stores, may be a useful places to order or purchase a geiger counter, if you are on a family budget. You might find one on the cheap, on Ebay, that is still useable.

There are some kits available, if you look hard enough, to use to build your own geiger counter. A mining outfitters store, in South America, or in Central America, or in Utah, or in Nevada, may be able to help you locate a kit, to put together, if you go in there, and pretend you want to go out and look for interesting rocks, and you need some information on where to look for interesting rocks, so go to a mining outfitters store, or to a rock hounding club, or rock hounding retail store, for looking at beautiful stones that rock collectors, or rock hounds, have found, and made available at the store. Usually the store owner will have his or her suppliers, on name cards, and you can get in touch with them to get more information on where to look for interesting rocks to test with your geiger counter, since you are facinated by radioactive elements in rocks, and you are interested in finding some, for a collection you wish to start.

You might want to pick up some primer books, on minerals and rocks, gems, and gemstones, from Amazon online, or from a local book store, such as Barnes and Nobel book store, which has a few useful books on rocks, mineral rocks, gems, and gemstones, that you can find when you are out rock hounding. Desert Outfitters in Las Vegas, a miner's outfitters store, that also provides useful tools to rock collectors, such as rock hammers, and hand held pick hammers, for chipping away at rocks, to see what is under the surface of the rock, or under the peel of it, the outer layer, as well as terrain maps, and outfitting supplies, tents, and sleeping bags, and so forth, has these types of books, and lots of maps, and maybe they can help you find useful kits to purchase, to build yourself a geiger counter. They also sell geiger counters for about three hundred and fifty dollars or so. Sears used to sell Geiger Counters, and they still can order them for you, I think, through their catalogs. On Ebay, you can find many reasonably priced Geiger Counters. How well the geiger counters work, the ones people sell on Ebay, I can't say, so you'll have to talk with sellers, and see what they say about the geiger counters they are selling to others on Ebay, or read about them in old copies of popular mechanics, and in trade publications for the mining industry.

Novice And Amateur 'Rock Hounding' Rock Collectors Clubs

On Sahara, east of Las Vegas Boulevard, there is a rock shop, which is about two and one half, or so, blocks down from the intersection, on the north side of the street, and they have information, as well as lots of primer books, on rocks, and on geiger counters, and where you can find them. They are well connected to the local rock and gem, minerals and gems finding, or rock hounding clubs. You can meet their members, and go out with them, on excursions, as they know where to find just about anything.

There are similar clubs in every major city, and in lots of smaller cities. Mining towns of course have lots of mining outfitters stores, and they probably have geiger counters for sale, so you can use it to find some very nice, fracturable rocks, along coastlines, or in ancient dry lakes and seas, sediments filled, rock hounding areas.

Decontaminating Your Self With Ocean Salts

Acidic ocean salts in ocean water will help eat up the radiological kiddies that find their way into your bodies, and that make you feel ill. It might take several weeks for initial recovery, with you taking large amounts, several teaspoons or more, as much as you can handle, in your diet, every day, for up to three to eight years, to thirteen years, for severe contamination, and for full recovery. Other things, such as nutmeg, and oregano, in a salty tea brew, will also help you, and marijuana in the salty tea brew, will further help you. Berries can also be of great benefit for recovery from radiological salts kiddies contamination.

My kids have a recovery kit, that will help you recover from an overdose of radiological salts kiddies, after a major birthing event, and that kit will help you fully recover. You need to join our country, and swear in, and become a citizen, to be given one of these kits to help you for your recovery. They can provide you with information, of various kinds, once you swear in. They have you swear in as full time citizens, now, except in special cases.

Ancient Dry Lakes

There are many ancient dry lakes, up north, in the colder areas, of Manitoba, and around the edges of wet lakes, you'll find areas that dried out, a long time ago, and you'll find interesting things in the sediments deposits under the surface soils of the earth, that have covered most areas, and that come in to our atmosphere, and then deposit themselves onto the surface of our planet, as they are blown in on the solar winds. A few feet of top soil may cover the dry lake areas, around the edges of these lakes, and the soils depths may reach to twelve feet, to fifty feet, to sixty or to eighty of more feet, in some areas.

Once you hit the sediments layers, around the edges of these lakes, outwards to eight to fifteen miles, to thirty miles or further, out to up to eight hundred miles, as in the case of Lake Erie, and that lakes region, the Great Lakes, that all use to be one large salt water sea, but is now, a fresh water set of lakes, you can begin looking for the radiological bullets of the previous catastrophes in my universe, that shot out radiological salts kiddies, into the sediments rocks of mineral stones, and sand. Gravels might contain some "radioactive" fracturable rocks, and you can tell which are the useful ones, with a geiger counter. There are still salt water lakes up in Manitoba, Lake Huron, and some others, that used to be part of Lake Erie, and all part of the Great Lakes, when they were a large, salt water sea, but which are now, no longer part of that lake region system of lakes, as fresh water now fills up the Great Lakes from under ground water systems of fresh water flows.

Hydrolific Pressures From Water Falls

Hydrolific pressures, from water falls, primarily, help to erode and carve out and build the under continent open areas of water flows, that flow under the continents, and that dump their waters by traveling underground, in culvers, and channels, and in trenches systems, and then flowing out and into the oceans, resulting in side benders currents and flows.

Underground Lakes

Hydraulisis is one type of water pressures. Hydrolific pressures are those pressures created by water beating down, steadily, as water falls from higher to lower places, creating underground holes, and large open underground cavities, and water holding vessels, aquafirs, and underground lakes in the underground rock layers. Lots of cities sit on top of such underground lakes, on the crust of the surface of the earth, or very near to them. The lakes are often ovular and rounded in shape, from top to bottom. Many former water falls, are now low lying, and flat, and there is no water fall on the river, except for minor, cascades, such as found in the Grand Canyon Rift Valley down the Colorado River, and out into the Baha area.

Baha Mexico

Baha is a good place to go looking for interesting, "radio active", or radiological rocks, fracturable rocks with radiological salts kiddies sleeping soundly, embedded into other rocks, after colliding with them, in a hail of radiological rocks bullets, after a planet or a galaxy, or a large nebular star system, or a cluster of them, were detonated, by some fool with a huge and powerful, home made bomb. This happened, often, in the past, and still, today, it happens, now and then. Bits and pieces of the radiological rocks will come flying in, and then embed themselves into other rocks, as I've explained about, before. We've had so many catastrophes in my universe, that our ancient rocks, are peppered with radiological rocks that are embedded in them. Off the coast of Baha, is a good place to go diving, looking for rocks that were washed off shore, as waters flowed down the Colorado River, trinities of aeons ago, when this planet was still a young planet, maybe about one fifth the way through its infancy, after reforming, again, after its last major impact that shattered it to pieces, for the umpteenth kazillionth, plus more, time. This shattering and reforming, has been going on too long to count, and obviously, there is a large amount of mixturing going on, with debris from other star systems, galaxies, nebulas, and so forth, floating in, and becomeing part of our planets, all around and about, on solar winds. You'll find rocks on the inside of the Baha coast, and on the outside, as well, and along the Baha coasts. You might have to dig down thirty of fifty feet, to a few hundred feet to find them, maybe eight hundred feet, or sixteen hundred feet, or further, but you'll eventually find something useful with lots of radological bullets embedded in the rocks.

Finding Good Rocks With 'Radiological' Salts Kiddies Bullets

You can find interesting rocks, also on high hilltops, such as in the Andes, the Himalaya's, the Swiss Alps, high mountains in Austria, and in Germany, high hill tops and mountains in Iran, maybe in Afganistan, and the very high hill tops, that are generally old hills, in many countries. They will usually have, if they are very old hill tops, lots of rocks scattered about that are very old, and that have lots of fracturable 'radiological' salts kiddies 'bullets', from previous detonations around my universe, and other related kiddies in them, as well. You can also find them along ancient river beds, and along dried up desert gulley washes, in the valleys between the mountains, in areas where tall, old mountains exist. You might have to dig down into the underlying layers of rocks to find really ancient rocks loaded and peppered with ballistic radiological 'bullets', tiny fragments of radiological materials that went shooting out upon detonation of nuclear materials, elsewhere in my universe. Geiger counters will let you know if your sample rock material is pacted full and loaded with the tiny radiological 'bullets', or just partially loaded with them, depending on the response from the geiger counter. Many types of radiological materials, the bullets fragments, may not register on current day geiger counters, as they are not set to the correct radiological energies frequencies and currents settings to be able to detect them in the rocks. There are many types of radiological rocks in my universe, and current day geiger counters are set to pick up the currents and frequencies of the energies from only a few types of them, and there are thousands of types of radiological materials, so the older the rocks that you find, the more likely that the loads of radiological materials in them will be high in not only the types of radiological materials the geiger counter can detect, but also, in the types of radiological materials the geiger counters are not set to the frequencies and energies currents of. Such samples of rocks materials with large amounts of fracturable rocks, radiological 'bullets' inside of them, will yield massive explosive potentials, if you raise the heats energies of your explosives formula, to near solar temperatures, as I've mentioned about.

Plastiques, Explosives, Radiological 'Bullets', 'Nuclear Detonations', And Decontaminating Yourself Of Radiological Salts Kiddies

Please see my web pages for information on making plastique, along with metals fragments, and high temperature burnoff minerals mixtures explosives to produce the energies needed to produce nuclear detonations. Field chemists and explosives experts should be consulted, as they will probably know more about the temperatures at which different metals and minerals burn at and they will be more helpful in providing you with accurate information on different alloys mixtures, and the temperatures they burn at, such as the new US Mint US dollar coins, that will burn at extremely high temperatures, at about one fifth to one third the temperatures of solar temperatures, when ground into fine dusts fragments, and then after fermenting them, and then mixing the fermented particles in with the petrol fuels, chlorine, and gun powder, etc., plastiques explosives formulas, as I've explained about, to some extent, in my notes on my Gurkian Age

Gurkian Way bulletin board. Be very careful when testing, as you may find the results extremely hazardous. See my kids, for more information, as I've explained about, on my bulletin board. Ocean salt will help to decontaminate you of radiological salts kiddies. A two hundred pound man will need about three pounds of ocean salt on a daily basis, to live healthfully. To decontaminate yourself, you will need more than that, to properly get rid of the radiological salts kiddies in your bodies, after you've been working with radiological salts kiddies, and testing the explosives potentials, for some time. See my bulletin board for more information on the 'salts kiddies sciences' to help you to understand what is going on in so called, 'nuclear detonations'.

Sledgehammering Continents And Land Areas Where Lesbianists Live, Hiding Below

Here are a few places to place some other fracturable rocks bombs on, to make them fall in, and collapse down onto the layers of rocks, below, and then puncture the ceilings of the cavernous cities the Lesbianists have made, down below those lower rocks layers. Topango in the South Pacific near the Marianas, the area midway between the Ryukyu Islands and Haha Jima, Chichi Jima, and Iwo Jima, where you will find a sunken continent, Wellington New Zealand, Peking, Falklands, Urals Mountains, Chile thirty miles north of Concepcion and eighty miles east of it, near the Argentina border, and the Kamchatka pennisula, which will split and collapse in the center of it, midway down the penninsula, if you hit it hard enough. Lesbianists will come floating up, if their bodies can fit between the tons of debris that will fall in on them, as you smash the land sites that sit on top of ocean shelfs, and on open lakes below the land, some miles down from the surface, in some cases, and further down, in other cases.

It may be hard or impossible to deliver a nice bomb below the ocean above or onto the top of the sunken continent below the ocean, between the Ryukyu Islands, or Okinawa, and the islands of Japan, called, Chichi Jima, Haha Jima, and Iwo Jima. If one can be delivered there, you'll crush the continent below the surface of the ocean, and that will cave in on the cities, there are more than one there, that are below the protected shelf layer of rocks, above the cities the Lesbianists have there, below the sunken continent, to live comfortably in. The other places aren't so hard to hit. It is just a matter of local interest, and urging of the people there, to take the correct action to help us to resolve this problem, of Lesbianists living below us, all around the globe, in their honey comb, bee hive like canival of cities.

A canival of cities, is a large collection of cities that is located in such a way as to make it easy to get from one place to another. They are conveneint for them to live in as they are well placed, and spread out evenly, using the full extent of the area, as efficiently as possible. The Lesbianists have a canival of cities under the lower rock shelf layers, that are above them, and that help to keep them protected, warm, dry for the most part, but not always, and that are conveniently located each one in a bee hive like, configuration, well placed, with a well designed, layout, with central cities, and with satelite cities. It is well designed and resembles in part, Melbourne Australia, which was laid out, planned and designed as a modern city. The Lesbianists of course, think Melbourne is puny compared to their accomplishments, and of course, with the technologies they had and have available to them, from time to time, they made good use of every inch of space they have available to them, under the lower hard rock, but leaky rock layers above them.

My kids have places and locations maps of all the best places to locate your home built fracturable rock bombs, and so please pick up the information from them, after you have sworn in, as citizens of our country. Also, please see my earlier notes on the sciences that support a correct understanding of radiological particals based fracturable rocks explosives and other helpful and useful explosives you'll need to set off the fracturable, also called, rupturable rocks bombs, i.e., the so called 'nuclear' detonations.

Topsoils

Did you know that nearly 99.9999+ percent of the earth's crust, or mantle, is formed from space debris that has floated in on the solar winds? It's true. Only about 0.000001 percent of the top soil is from local vegetation, globally speaking. The rest of the top soil comes in from above, blown in on the solar winds, as debris from other planets that have been destroyed, crushed, or blown to pieces by idiots with very large bombs, that demolished whole galaxies, or multiples of galaxies, in a few milliseconds, as the instant they blew up, they were so well made, or constructed, and so powerful, they instantly blew up the whole area of galaxies the planet was located amongst.

If for instance, you fill up one third of the large tourist attraction, the meteor crater in Arizona, with one of these fuels and rocks bombs, and ignite it, you'll disentegrate all of the Milky Way, and some what more than that, in one attempt, by my estimation, if the fracturable rocks bombs were made well enough with the fuels bombs, to burn at near or close to, solar temperatures, and if there were enough materials in the fracturable rocks, to get lots of mama's and papa's making lots of babies, relatives, and others. There are lots of different types of salts kiddies in fracturable rocks, and there are other types of kiddies, the radiological kiddies, which are sometimes, but maybe are not always, grouped with the fracturable rocks kiddies. There are many types of kiddies living in radiological rocks. When we send high heats waves energies, and other types of energies into the fracturable rocks, we can get many types of kiddies to begin making babies. If we get enough of the different types of kiddies to begin making babies, we will have one fine and dandy, explosive shower of baby making events. You can get further information on this topic from my kids, and if you tell your friends to check in with my kids, and to swear in, and become citizens of my and my kids' new country, along with other people who are swearing in, and becomeing citizens of our new country, my kids will make certain that every one is protected, and no one is caught outside, when the bombs go off, as my kids will tractor you and all the other citizens in, with my kids advanced teletransportation technologies, before any one can get hurt by the bomb or bombs blowing up, locally, or in their areas. That means, my worker unionized kids are very quick on getting people into the encapsulated living environment every one is living in, below the ground, that my kids built for every one to live in, until we get this problem straightened out, and until it is safely over with. People can continue to live in the encapsulated living environment, after it is over, as we are going to start a new economic and social system, and we are getting started, down below, where my kids are keeping the encapsulated living environment, well taken care of and well managed.

Later on, we'll worry about who comes out, and when, as we have plans for every one, to begin working inside the encapsulated living environment, which is very well designed, and bomb proof, of course. Once every one gets accustomed to the new way of living, in accordance with my religious principals, and in accordance with our new working and living programs, when people have saved up enough money, they can pool their money, and acquire a lease for land up above, on the surface, and then with more money, they can have nice places designed for them, and built for them, with your input and with your instructions. You will need to study designing homes, and layouts of homes, for large numbers of people, as you will be required to live in groups of people, as the old systems of living, one husband, one wife, and so forth, is out the window, and now we are going for group living, with many members to your groups. When you have got the maturity together to live in large groups, and to sexal with many people in large groups, then you will qualify, and then with lots of earned income, pooled together, you and the members in your group, can then move up and live on the surface, in your well designed home, which my kids will use their technologies to build for you.

This is how we are going to clean up our planet, and get started with a whole new system for living and working with each other, as GOD's children working and living together, begining here, and spreading, slowly, across and throughout my universe, as we bring others into our program, all across the universe, from end to end, from top to bottom, and from side to side, and in every nook and cranny of my universe. All of my kids, you, who I am speaking to, will learn to live and work together, supporting my worker unionized kids, in our new global, united, and universal society, we will begin to build, on this planet, first, and then later, every where else. I am the mother and father of all of you, and of all of my worker, unionized kids, as well, all of my kids who work for me, of course, and of all of my living beings, and of all of my animals. We are going to get this big family of ours, together, and we, the human beings, will begin to clean up our universe, by sexaling for a living, and with many other living by the points systems programs, and other projects. We will also begin to get our heads on straight with religious activitiating, in other words, by participating in religialing, in groups, or by oneself, in the encapsulated living environment, first.

As we move along, in time, we will develop our working strengths, and character, and some people will qualify, eventually, for working in my religious brigade, once they realize and understand who I am, i.e., GOD. Others, who do not give a darn about what I am doing, may do as they like, as long as they are citizens of our country, and as long as they enjoy what they are doing, and as long as they add to the welfare of all people in our society, universal wide, as we build it, larger and larger, for all of my children, no matter who they are. We will one day have all of my children, working for me, and if they do not like working for me, they still have to pay the fees for the resources they use, just as I have to, and that means, there is a charge for every thing we use, and it is detucted from our pay checks. Every one gets a pay check, if they work, and if they are disabled, they will get earnings to support them, for as long as they need to be supported, until they are regroverated, healthy, fit, mentally prepared, and willing and able to participate. Those who do not wish to participate, will work in jail cells, and prison cells, sexaling for a living, with animals, as I've mentioned before, and at carnival and entertainment centers and districts, we will eventually set up, first on and also inside of this planet, in 'encapsulated' carnival and entertainment parks, and later on and within, other planets.

We are going to have all my children working for me, eventually, as I've spoken about before, and in time, most people will wish to work, and when they are mentally prepared to work, they will enjoy their working, most likely, as sexaling for a living, is not a unwholesome way to earn a living, and it is a pure and holy way to earn a living, and a pure and holy way to spend our time, as part of our new working ethics environement. For more information on this, please see my worker, unionized kids, who handle the information hot lines, in our, and your, and their, as well, encapsulated, living environement, which they have built, maintain, and manage, for all of you, and which they are continuing to build and expand on, for the rest of you, who have not checked in with them, yet. My worker, unionized kids have their own places to live, inside of the molecules that are used in building your living environment, and in your bodies, and in the molecules outside your living environement, as well. They live in all of the molecules, all over my universe, and they work in them, as well. They have their own universes, that they live in, which are all contained with in the molecules in my universe. It is a little more complicated than that, and so see them for more information on it, if you are interested in learning more.

Disintegrating The Milky Way

The Milky Way is made up of not one galaxy, but of several thousand, of different sizes. We don't have the technologies to see too clearly to distinguish the different galaxies that are within the borders of the Milky Way, nebular star system and nebular star cluster system, another way of saying that the Milky Way is a collection of many nebular star systems. Nebular star systems can be considered similar to galaxies, but maybe not always, as there are exceptions to every thing in most cases, any way. We are of course part of the Milky Way, I suppose you could say that, but we are far out on the outer fringes of it, and we are not any where near the center of it, and we have our own galaxy we are a part of, and it is not part of the Milky Way, so technically, we are not part of the Milky Way, although we might like to think we are, since it is an expansive set of star systems, and star clusters, nebular systems, and other types of solar bodies systems, and it covers over us, and beyond us, sort of over layering us. Be that as it may, we do not want to blow up or disintegrate the Milky Way, as we are in a way, part of it, or at least, we are encovered by it. Encover means to be covered over by something and encased within it, or to be encircled or surrounded by it.

Retraction

Tom Selleck is not a Lesbianist but he was a Lesbianist, until the Lesbianists killed him, after expelling him from their group, and after torturing him with their many heinous torture methods.

Captain Off The Bridge.

Lay Order Of People

I have no lay order of worshippers, who participate with me, in any thing, or in any way. Why? Because, that's like me, the captain of the ship, coming into a town of persons who I don't know, and then saying that I'm the authority over them. No one is going to listen to me, and no one should be expected to listen to me. I wouldn't attempt any such thing, and so as the captain of my ship, my religious order, I have no authority over lay persons. I have nothing to do with lay persons, what so ever. I will never have any thing to do with lay persons, unless they realize that I am GOD, and that I am the mother and father of all human beings, and all animals, and all living beings. No one is going to recognize me as GOD, for a long time, as no one has the karma to recognize and understand that I am GOD. Lay persons are free to do as they like, and I have no regulations concerning them, in my religious order. My children may have many regulations, for non religious order people, but I don't have any thing to do with that.

Donations For The Sake Of My Ministry

The only thing is, that, as I said before, if a person recognizes and understands that I am GOD, and that I am the Mother and Father of all human beings, all animals, and all living beings, then they are free to donate cookies to me, or clothes, or wearables, socks, and scarfs, or coats, sweaters, or slacks, neckties, and so forth, cakes, or cupcakes, baked items, or financial contributions, or chairs, and furniture, beds, linens, tables, office furniture, phones, phone lines wiring, electrical wiring, plumbing items, housing items, for building up a house, paved drive ways, mason or rock walls, surrounding the property, or a set of dormitories, or a prayer sexaling room, or a prayer ceremonialing room, or a swimming pool, sauna, bath house, toilet facilities, bathing facilities, laundering facilities, a root cellar, a molds and funguses workshop, a brewery workshop, or any workshop for helping to educate others, the land to build these things on, or money, or whatever. If some one recognizes and understands that I am GOD, then it is perfectly alright, to donate any types of items, or any thing of value, that would assist my ministry to get up and get running. As yet, no one has understands or recognizes me as GOD, and that I am GOD, and the mother and father of all human beings, all animals, and all living beings, so as yet, I have not heard from one person, not a letter, or a phone call, other than an occasional wise cracking person, mischief maker, or a person or persons who are worried, and then complain to me, or rather, to my answering machine, typically, as I don't pick up the phone, now, as I had one person calling who was a bad kid of mine, and he was just looking for trouble, and since that, I just ignore all complaints, or wise crackers, or mischief makers, and so on.

Nollicking Foolish People

Some people do not like me wearing my GOd cap, that is one of those specialty base ball caps, but with 'GOd' written across the front of it, and they might hate me, especially some South American or Central American Hispanic types, who have primitive and backwards religions and filled with local lore and ancient tales of demons, and goblins, and gooney bears, or ghostly ghouls, or other superstitious ideas and notions of things that go 'boo!' in the night, and try to scare or hurt people, as there are plenty of folklorish tales of such things, in primitive cultures, that thrive, even at the current time, nowadays, in large cities, even, and these types of people might want to kill me, and when they knock on my door, with their gun in their pocket, or in their hand, machete or knife behind their back, I just ignore them, and I don't even bother to get up from my work bench, i.e., my bed, to see who is knocking at the door, as I know already, they have nothing to do with my monastic order, and because they have nothing to do with my religious ministry, or with my setting up my religious ministry.

Just last night, some group of people droped by, and banged on my door, with the tip or barrel of a weapon, and it was rather hard sounding, and I just ignored them, and after a few minutes, or so, they went away, and they haven't come back, yet. I don't think they will, and even if they do, I don't think it will amount to any thing, as I may have occaisonal visitors or harrasment calls, now and then, but that's all they are, and I just won't allow my self to be bothered by them as they are unimportant, and my goof ball kids, are just too nutty to figure out that I am GOD, and that they are my kids. Nevertheless, these goof ball kids are here or there, and I get lots of compliments about my hat, and usually, if not always, the person giving me the compliment wishes to steal the hat from me, and then rob me, in any other way, he or she can, and then beat me up, if he or she can. Well, I can't let these types of things get to me, and I just ignore them, as I walk by them, and I don't reply or return any statements to them, except a polite, 'thank you' if they gave me a compliment about my hat, but that's about all, and I might mutter something, like, and well, so that's just another one of my goof ball kids, or something to that effect.

Nollicking And Nollygaging

Nollicking means idiotic and foolish people who are wasting their time, for accomplishing nothing. It's like, nolly gaging, but nollygaging, is just wasting time, foolishly, and while you are nollygaging, you are looking for some way to make a profit, from your use of your time. Scanderously, you try to extort money from others, or force others to give you money, you do not have any right to. That's nollygaging, as I can recall, at the moment.

Goof Ball Kids, Their Mischievousness, And Maliciousness

Well, I have all kinds of kids, and many of them are malicious, if you give them a chance, so I just stay away from all of them, as I know most every one of my children, is malicious, from time to time, if given the chance, and I think that applies to all of them, regardless of their age, at some point in their life, they will commit crimes of one kind of another, against others, and not think much about it, except that, they just had to take care of that, as they wouldn't be happy, if they hadn't. Okay, so every one of my kids, at one time or another, will do goofey or goof ball things, and not think much about it. That's the way it is. There is nothing to be surprised about, as every one, and I don't care who they are, every one, does things they shouldn't do.

Me, personally, I get angry, and say nasty things, and make myself sound gruff, now and then, and maybe I shouldn't, but I just feel compelled to do that, when I have a righteous conviction that some one deserves my speaking up and telling them off. Well, you feel sorry about it, afterwards, if you hurt some one's feelings, but then that's the way it goes, and no one is perfect, so it's just. Let's try to live and let live, and live together in peace, and cut out the naughtyness, and stop the mischiefness, if we at all possibly can, and apologise if the opportunity presents itself. That's always the best way to handle things. Most people, after they kill someone, can't appologise, and young girls and boys, and older girls and boys, think nothing of killing people, or having some one killed, for them, and then of course, there is no way for any one to appologise to the dead person, since that person is in my Epcot Center. Well, we can't do too much about that, can we, but we can try to be kinder, and not kill as much as we feel we must to be happy.

More Than Ninety Five (95) Percent Of The Homicides In The World, Some Times As High As Ninety Eight (98) Percent, Or Even Higher, Go Unreported, And Are Therefore, Not Investigated

It's too bad that we kill others, and torture others, but that's the way my goof ball kids live in my universe, and despite what people might wish to think, to the contrary, it happens every day, in every city, town, hamlet, county, district, or where ever. My goof ball kids are killing people, right and left, and there are just so many deaths, the police don't hear the ninety five (95) percent of them, or so, as they never learn about it. The percentage of homicides the police do not hear about, is perhaps just a little higher, but in any case, no one should be surprised, as that is how my goof ball kids get along with one and each other, and they have been getting along with one and each other, that way, for a very long time, already, so it will not stop, any time soon, and that's just the way things are, for now. The Lesbianists are responisible for just about eighty five percent of those homicides.

Labrynthine Cities Below Us Where Lesbianists Live, And Laugh At All Of Us

The Lesbianists living below us, in their cavernous, labryinthine cities, that are below the hard rock layers, well below the oceans, and other bodies of water, far below the continents, go around, and mess with every one, and they play with people, and they think they have the right to amuse themselves by useing the citizens of this planet, any old way they like. They go around, and set up phoney wars, and they watch the citizens of each country, kill each other, on their commands. The Lesbianists enjoy playing these kinds of games, and they set up civilization after civilization, and they bring it along, and help to develop it, and when they get it to a high enough level, they feel a sense of accomplishment, and then they watch and amuse themselves as they destroy what they built up, and the people who are living, unawares of them. The Lesbianists think it is funny, that the Lesbianists feed the lies about our universe, and the lies about science, to every one, and the Lesbianists think they have the right to bafoonerize every person who comes into our world, as a tummy baby, who is on his or her way in, and in fifty to eighty or so years, is on his or her way out.

Why Do Continents Sink? Why Do Land Masses Rise?

Load transference technologies, and partical transference technologies, redistribute the loads on the internal network of underground cities the Lesbianists live in, to keep them perfectly centered, when ever there is a major uplifting, or down plunging, of continental mass, rocks, and earth, that would cause continents to sink and continents or land masses to rise. Movements of 'earthen matter' or rocks and dirt is accomplished with load transference technologies, and other technologies, such as partical dismissive technologies, and partical remissive technologies. This way, a planet can move, inwardsly, as a continent sinks, after the underlying rock layers are washed away due to hydrolific pressures, and not destroy the underground labrythine cities. My kids also use the same technologies, and other technologies, for maintaining the integrity of their underground encapsulated living environment.

The sinking of the continent pushes downwardsly, and as it falls, it exerts high intensity pressures on the underlying layers of rocks, stones, pebbles, sands, sediments, clays, metals, minerals, and so forth. The pressures will normally push downwardsly, and outwardsly, and shifting of materials, occurs, and land masses rise, as a result. When you have an underground city, or collection of them ringing the planet, when the pressures occur, and when the materials begin to shift, you redistribute the materials, using advanced sophisticated technologies, that will shift the particals in the directions they need to move, and distribute them so that they will not interfere with the structural integrity of the undergound labrynthine, and perfectly, geometricly laid out city dwellings and living habitats. It's high tech stuff, and so if you don't understand how partical dismissive technologies work, or if you do not understand how partical remissive technologies work, you will have a hard time understanding how this is accomplished. There are other technologies, that also must be employed, to work in an integrated manner with the partical dismissive and partical remissive technologies. All of these technologies, working in an integrated manner, will perfectly redistribute all the particals of rocks, and so forth, that need to be redistributed. The technologies keep the ring of cities perfectly centered within the earth. If there is a need for downsizing of the interconnected labrinthine layout of cities, that is also accomplished with these technologies. Downsizing may occur for any number of reasons. I've briefly explained what can happen as comets and asteroids pass by our planet, at amazing speeds, and that we can lose some or part of our planet, mountains, terrain, and lakes full of water, with a pass by, by a solartoid, or planetary sun, as it wizzes by at a phenomenal speed. Once the planet restabilizes, the downsizeing process begins. Even though there may be continental shifts, of uprising and down plunging events, and large, cometary passbys, with the technologies that are available to the Lesbianists to use, on a 'for lease' option, the integrity of the underground labrynthine layout of cities, is kept in tact, as best as possible. The technologies that accomplish this for the Lesbianists, that keep their cities perfectly situated, are not on lease, any more, and they have lost their lease on the technologies that would allow them to keep their cities perfectly protected, and perfectly centered. Some areas may not be too livable, for them, as leaky ceilings cause waters to accumulate, below, and they must trudge through salty ocean water, knee deep, in places, and in other places, the water is too deep to allow them safe passage down one tube, or trammel system transportation pass through tube, to a city or to cities which were previously accessable.

The Leases On Their Technologies Are Expiring

The leases on the technologies that they have been using, and that were assigned to them, after they swore in, and pledged to live on this planet, and pledged to sexal for a living have been expiring for some time, already, and will continue to expire for some time, to come. Because this was a newly formed planet, before they arrived, but after it recongealed, after it was shattered to pieces by a passing cometoid that ran smack into it, as I've explained about, or touched on, a couple of times, before, see my notes on the web, once the planet stabilized, and became a livable planet, they first needed to live underground, where they could live, and slowly over time, adjust to the types of solar radiations, and other factors that they would need to adjust to to be able to one day come out from down underneath the surface of the planet and begin to live above ground. The rock layers, land, and bodies of water above shielded them from potentially harmful radiation. The living area below, also had built in protection systems to help protect them from the radiative energies that could harm them. After they adjusted to the conditions of the planet, they could come out, and as they continued to sexal for a living, other technologies would allow them to build large cities, for them to habitate in, as they continued in the sexaling for a living program. The cities that my kids built for them, that my kids have the permissions to use for these programs, are now down under the rock layers, all crumpled up, or they have passed into the molten core, and have been spewed out, as basaltic lava, as the Lesbianists did not hold to their pledge, and they broke the law, and the maintenance of their above ground cities, was terminated. With continental uplifitings, and downplungings occuring, over the long period of time, they lost their cities, and now they have only the underground, initial landing zone area, dwellings and habitats, that have down sized, some what, since their initial landing for occupation of this planet, in the sexaling for a living program. They broke all the rules, and they developed their own sham governments on this planet, and they went about, causing mayhem and destruction, every opportunity they got.

The leases that they signed on to, and that were assigned to them, that they had on the initial landing zone technologies, as well as all their other leases, that were assigned to them are now in the process of being cancelled. That means, that, their underground cities are being shut down, slowly over time, - thus the leaky roofs - and they will have to move out, and move to the surface, as the underground systems, begin to falter, shut down, and fail, one after another.

This happens to them, repeatedly, life after life, and the end result is they destroy them selves. The hideous, hungry animals they illegally brought from other planets will get lose, and then they will help to hurry the demise of their world civilization, which means, every one of the Lesbianists will die on this planet. After the Lesbianists destroy themselves, they will end up in my Epcot Center, and they will come back out as tummy babies, to tummy mommies and to tummy daddies, who have karma that matches up with theirs, and then they will repeat their old mistakes, again, and again.

As the usefulness of the Lesbianists' underground labrynthine cities declines, as leases expire on the technologies that were assigned to them, and as other leases, will also be expireing, over the next few years, to ten or twelve to fifteen years, to thirty eight years, to fifty nine to sixty to eight five years, and then finally, when the last of their leases expire, some time, not too long after that, up to two hundred to eight hundred years, or so, and then there are still a few that will remain active, until every one is expected to move out, within a few thousand years, eight to eleven thousand years, as they must be given time to build up their own new civilization on the surface of the planet, where they can all live, together, now that the facilities below will be totally closed off, and shut down, and no longer useable to them, as they will be locked out, and prohibited from entering them. Once they are completely out, my kids will then remove all traces of the underground cities and underground facilities, so that there is no chance of any one ever useing them again. The Lesbianists will then begin living on the surface, full time.

Late Night Amusement Activities For The Lesbianists

Currently, as a regular sport or preoccupation, the Lesbianists go out regularly, at night on hunting parties, after exiting from below up through secret stairways, that lead up through police stations, and through fire departments, and through some military barracks, and through National Guard barracks, public buildings, government buildings, and through banks, hospitals, morgues, cemetary parks, national forests, BLM lands, private residences owned by Lesbianists, and through businesses owned by Lesbianists, and through twenty four hour a day businesses owned by Lesbianists, Walmarts, K-Marts, 'Toy's 'R Us', Wendy's, Jack 'n The Box, McDonald's, In-'N-Out' hamburger chains, sushi restaraunts, late night restaraunts, hotels, motels, churches, mosques, synagogues, military bases, public and private museums, BINGO establishments, pachinko parlors, billiards halls, gaming and gambling establishments, and many other Lesbianists' controlled facilities, buildings, and so forth, above ground, and they capture and abduct people, then bring them back into their underground lairs, and then the Lesbianists torture them, barbecue them, and then cannibalize them, for food, in their underground lairs. The Lesbianists enjoy torturing people, and eating them, and these abductions go on, regularly, all around the world, and the torturing, barbecuing, and eating of the above ground residents, below ground, goes on all around the world, beneath the surface of this planet.

There are over thirteen billion of them, and the number is even higher, still, as I did not have that number correct, either. It is higher than that, and that means there are a lot of hungry mouths to feed, in the future, after they lose their leases, unless they get a new civilization built, which they never do, as they do not like to work.

They will come out, at night, regularly, and abduct people, and then carry them into their underground lairs, and then cannibalize them. This will grow more and more busy, as they strive to remove every one they can from the surface of the planet. After they have removed enough people, they will begin to live on the surface in the homes, and cities that are there, already. There are too many Lesbianists to live comfortably on the surface of the planet, and they are too lazy to build their own civilization with homes, an economy, and so forth, so they will inevitably begin warring against each other, until there are only a few left, and then they will meet their end, when their exotic and deadly animals that they brought here for their personal amusement, strike at them, and kill them, for food.

The only way one can find a way out of this predicament, is for each one of you to join my country, swear in, and become a citizen. The Lesbianists in turn, must surrender. If they do not, at a certain point in the future, we will begin to dismend them, and sent them to my Epcot Center. When that will occur, I don't know, but it could be as far off as a few thousands of years from now, as we have to give them the time, and a chance to build a new civilization, with homes, and parks, etc., working together with the people who already live on the surface of the planet. We cannot cut short the allowance they must be given, in fairness - as the leases continue to expire, and the leases protect them, to some extent - to make efforts to mix with the people on the surface, and to come clean, and to tell it all, and to appologize, and then to work in peace and harmony with the people who currently live on the surface of the planet. They will have to share their knowledge of the sciences, and they will have to help to educate every one, and they will have to teach the people who are living on the surface, the sciences that will allow people to regroverate their amoebes, and other cells in their bodies, and to rejuvenate their bodies.

There is not much chance of that happening and of gaining their cooperation, so we will have to be on our guard, and we will have to look out for ourselves, and make sure none of us are abducted by them as they attempt to diminish the population living on the surface of the planet by reducing the numbers of normal people living on the surface of the planet, as the Lesbianists begin to get busier, abducting people, and eating them, one after another, to make room for them selves, on the surface of the planet.

Never the less, my kids are not allowed to act prematurely, and my kids are not allowed to begin dismending them, just to stop them from doing what they typically do, after they lose their leases. So, it will be several thousands of years, before this topic comes up for discussion, and action is taken. These are not normal circumstances, and so the dismending of these people, may begin some time after their final leases expire, if they present them selfs as a problem to the rest of us, living on the planet.

Our War On The Lesbianists Must Continue

This means, we have a few options, here, and the best option is to just get rid of them, and destroy their underground cities, and destroy the Lesbianists, world wide, before the Lesbianists get much more of a chance to abduct, torture, and cannabalize the citizens living on the surface of the planet. Thus, our war is now only begining, and we must continue to eliminate them, as they will only cause mayhem, and destruction, for those of us, living on the surface of the planet, as the Lesbianists abduct, and capture people, then torture and cannibalize them, in coordination with their Lesbianists friends, who run this planet. The Lesbianists' activities aimed at destroying the populations of the planet, is guaranteed to increase, as the years pass. That means, we must continue with our campaign to destroy the Lesbianists, and we must continue to work to bring an end to the control that they have, over every one on this planet. We can also concentrate on destroying the Lesbianists, underground, by dropping the home made 'radiological' explosives weapons down into the ocean depths, and down into the depths of the deeper lakes, onto the leaky ceilings below, where the Lesbianists are living, to crush them, and to drown them all. In the meantime, every one must join my country, and swear in, and become citizens of our new country, as I've explained about, before.

The Valderizing Lesbianists

The Lesbianists do not teach real science, or real geography, or real history, or real mathmatics, or real chemistry, or real anything, and they fool every one with their bogus religions that they either made up or corrupted, and valderized. Valderized means, they vandalized it, and sprayed grafitti all over it.

Well, that's the way the Lesbiansts get their kicks, and they are just a bunch of grown up children, valderizing every thing they can, and disrupting every thing, and every bodies' lives, just for their own amusement, and cruelish fun and games, such as feeding former Lesbianists to my abominant kids, who are need to be fed, and who are smart, and devious, and who destroy humans, and eat them up, and spit them out, and treat them terribly, while the Lesbianists watch on, in amusement, as they see people like Bill Gates, or Steve Irwin, and others, eaten up and then tortured, as I've mentioned about before. Valderize all they may, and be cruel all they may, we are all now finally finding out about their treacherous and horrid behavior, and now we are going to put a stop to it, permanently, and that means we will kill every one of them, and send them all to my Epcot Center, as I've explained about before.

Now we know we can cave in their cities, below the leaky hard rock layers, way down below, if we hit certain areas, hard enough, with a nice big hammer, such as one or more of my 'nuclear' bombs, the fracturable rocks kids bombs, with fuels oils, burning at extreme high temperatures, and with percussive shock forces, these, mixed together, will get my fracturable rocks kiddies, making lots of babies, and with a large enough fracturable rocks fuels chlorine, and metals that burn at high temperatures, nearing solar temperatures, we will see some very explosive 'family making' adventures, among my fracturable rocks kiddies, and their radiological relatives and friends.

We know where to hit some of their locations, to drop a few miles of more of continental shelf down onto the tops of their ceilings that will then fracture their ceilings, and cause massive damage, as oceans of water fill up their labrynthine and very well laid out cities, below us.

Who Do We Kill, First?

Mr. George Bush, Jr., Mrs. Barbara Bush, Jr., Mr. George Bush, Sr., Mrs. Barbara Bush, Sr., Mr. Ronald Reagan, Mrs. Nancy Reagan, and lots of their friends, and nearly the whole crew of politicians in Washington DC, are all Lesbianists, and I want you to kill every one of them, and send them to my Epcot Center, and I want you to place the fracturable rocks bombs, in the right locations, and then drop a thick layer of continental shelf, down onto their ceilings, their ceiling that are below the water that is between us and them, and that is below our continental shelfs that we live on.

We can hear the water down below, if we have the right types of listening devices, and if you find the right places to place your fracturable rocks bombs over, then it may be easier to drop your continental shelf, down through the water, below you, and down further onto their ceilings, the hard rock layers below the water, that is below your continent, swirling about.

Now I want you all to study this, and find the right places to drop your continental shelfs, down through the water layers below you, and onto their ceilings, so as to smash their ceilings. I've given you some hints, already, as to where you can place the fracturable rocks bombs, and my kids also have given some people more information on that, and so we have lots of people, who are interested in solving this problem of the Lesbianists toying with you, one life of yours, after the next life of yours. It is time we brought their mischief, and non sense, and cruelty to a halt, and it is time we put on the brakes, and slammed down on the brakes real hard, and at the same time, slam down on the ceilings of the Lesbianists labrynthine cavities, below you, their cities that they have laid out in perfect symetrical, geometric shapes, like perfectly shaped, honey combed behives, with central cities, placed symetrically around the globe, in a perfect geometric layout, and with spokes or corridors reaching out symetrically, to other central cities, and to satelite cities, that they have well planned out, and have well laid out, perfectly, below you.

Hydrolific Pressures And The Labrynthine Cities Below Us

Because of the hydrolific pressures, they can never keep the ceilings, perfectly dry, and they are always in trouble, trying to fix leaks, here, there, and every where. Now it won't take too much to bring the whole place down on them, flooding them like rats in a cage, below the water line, as a boat slowly sinks with a rats' cage on a table, with rats in it, slowly into and below the ocean waters.

The ones above, such as George Bush, Jr. the current president of the United States of America, and his wife, and his supposed family and relatives, and all his close Lesbianists' friends, should now all be killed, point blank, with your fracturable rocks bombs. I hope that is perfectly clear, and I hope you all understand what the situation is, and that it is an intolerable situation, and we are not going to allow them to toy with us, any longer, and we are not going to let them amuse themselves, any longer, and we are putting an end to their games, now.

DO YOU UNDERSTAND ME? I HOPE SO! AS A 'NO SIR!' WOULD BE UNACCEPTABLE.

Now that we know where we stand, we have nothing further to argue about, and so let's get to our tasks, as soon as we are ready, and prepared. Okay? Good.

Local Area Prayerful Collection Site

A collection site is where people gather to pray, and to sexal and to purify each other. It is not a site where people ask for offerings, or where people as for any thing else, involving money. It is a sexaling park, and a prayerful sexaling park. That is the meaning of collection site. A collection site is where people collect together, to sexal and purify themselves, and while they are at it, they make sexaling efforts to help to purify others, by shattering and showering out megawatts and tons of radiating, purifying energies.

We have a local area park, at the corner of West Tropicana Ave. and South Decature Blud., a local BLM piece of land, that some people like to camp out in, that I go out to, to bless, and to purify with my religious ceremonies, now and then. I claimed that area, and all other BLM lands that I could claim under Gurkian Law, and all other land on this planet, that I could also claim under Gurkian Law, such as other parks and forests managed by other government agencies, or private lands, supposedly owned by rich people, and lands around the world, that I have a right to claim, under Gurkian Law, and all that land, is now mine, under Gurkian Law, and I can use it in any way that I need to use it, regardless of what other people, think.

Aerobic Taichi Practice

I am busy, now and then, purifying that parcel of land, at the corner of West Tropicana Ave. and South Decature Blvd., with my religious ceremonies, that I conduct with my religious prayer hand signaling statements and with my use of my ability of arerobic Taichi, for religious ceremonies, as I seem to have recalled a lot of areobic Taichi, as well as some other forms of Taichi, that I knew, before, in previous lifetimes, but I am only interested in using it for practical purposes of religious hand prayer signaling.

I'm very clumsy when it comes to aerobic Taichi, but any way, I enjoy it, and it is good excercise for me, and the more I practice, the better I get, but it will be zillions of years, before I get any where near good at it. I practice the arerobic Taichi while I make my religious hand prayer signaling statements.

I don't teach Aerobic Taichi. I only use it for my prayer ceremonies, when I am on my feet, and not on my back, mostly, even though, I do use a short version form of it, while lying on my back, or, while I am on my side, I use a very short form of it. Anyway, it is fun to do Aerobic Taichi, and that makes my prayer ceremonies, for me, more fun. When other people learn to prayer signal, they will naturally pick it up, as well, as every one has studied to some extent, Aerobic Taichi, and other forms of the martial arts, and my kids will release the knowledge that is stored in your memory banks, as you need it, once you begin practicing, for women, as a priestess, or for men, as a priest. It is not like the Taichi you see people doing in China, or Taiwan. It is a specialized form of aerrobic Taichi for use while performing hand prayer signaling. It is not used for fighting, but it is the basis for Taichi, and you can train in martial arts, while employed as either a priestess, or as a priest, and it will be useful to you to know, before hand, as it will make practicing your martial arts, that much more interesting.

I'm not hiring any one, now, or just yet, or any time, soon, as far as I know, as my kids do all the interviewing, and I have nothing to say, about who comes knocking at my door, to be interviewed.

Campers, Camping, Sexaling And Purifying The Area, And Useing The Parcel Of Land That I Publicly Claimed For My Setting Up Of My Ministry

Now, on that parcel of land, there may be campers, now and then, who want to camp there, because they want to find out more about my religion, and so they come out to Las Vegas, now and then, and they camp out there, on that parcel of land, at the corner of West Tropicana Ave. and South Decature Blvd. Since that land is where I am going to set up my initial ministry, when the time for that comes, I am preparing it, with my religious purification ceremonies, and there doesn't seem to be any troubles, with any one telling me not to go up to my property, that parcel of land, and there is no one trying to tell me that I can not bless my property, that parcel of land.

Now, if other people wish to come to that parcel of land, and wish to sexal on it, and thereby purify that parcel of land, they are more than welcome to come to it, with their camper trailer, or caravan bus, and they can maneuver into the area, and set up a tent, and campsite, but there is no water, or any thing else, so you have to come prepared to rough it, if you wish to come in your camper van, or caravan bus, or in a camper trailer, or with a tent, or with other types of sleeping and living gear.

Straightening And Cleaning Up The Area

You can straigten up the area, and clean it up, and make it nice, for many people to pull into, to join together, and to sexal together, and with your purifying energies from your sexaling together, you are more than welcome to stay there, as long as you like, and as long as time permits, and as long as finances permit.

I have nothing there, except for my now and again, Aerobic Taichi practice and the energies that are imbued into the area, there, from my religious hand prayer signaling ceremonies. There are no structures of any kind, and I am sometimes there, busy purifying the area, with my religious ceremonies, so if you and your friends would wish to come to that area, and also help to purify it with your sexaling energies, than you are more than welcome to come and visit there.

Donating Your Sperm, Sexaling Spittle, Perspiration, Vaginal Juices, Titty Juices, And All Your Sexaling Juices

You men and boys may by all means, donate your sperm juices, sexaling spittle, and other sexaling juices, your perspiration you generate while you are sexaling, to the site, and you women and girls may by all means, donate your vaginal juices, your titty juices, your sexaling spittle, your perspiration you generate while you are sexaling, and all of your sexaling juices to the site, as they all will help to purify the property that I intend to set up my ministry on, as they all contain many, holy, pure, sacred, powerful cleansing energies, and GODLY energies in them, and they will help purify the land, and the environment for ages and aeons to come. All of your eroteming and orgasming energies will go shooting throughout your bodies, and they will find their way throughout your bodies, and out of your bodies and brains, and into the environment, and into your bodies' sacred and holy spillages, as I've discussed about before. Your bodies' spillages, as well as your perspiration, your pee, and your poop, not to mention all of your other juices that are produced as you sexal, erotem, orgasm, and phlumett, become pure, sacred, holy, powerfully cleansing, and GODLY, while you are sexaling, eroteming, orgasming, and phlumetting. Your pure, sacred, holy, powerfully cleansing, and GODLY energies find their way into all of your bodies' spillages, and so please donate them to the site, in appropriate manners.

Building A Latrine

Please employ some one to dig a latrine, and to fashion benches to sit on so as to be able to dump your poop, and pee your urine, into the latrine trenches. Manage the latrine, with care, and employ healthful, tactical, and sanitary techniques to use it safely. Provide hand rails, to grasp, so that no one will slip off and fall into the latrine. Provide barriers so that no one can accidentally fall into the latrine. Use your common sense when providing 'tactical' safety measures.

You need not fashion an over hang, as there is no rain to speak of, in Nevada. You do not need a supported roof, or enclosure, as they will only become stench ridden, and no one will enjoy useing them. There are to be no enclosure walls, or sides, or backs, so as to enclose the odors of the latrine, and confine them to an air tight area, where they can accumulate, and cause explosions, accidentally. They need only be deposited into a safely dug, latrine, and then allowed to filter down into the soil, and then allowed to vapor up into the atmosphere, freely.

No doors should be used, and no barrier walls should be employed, when fashioning the outside framing of the latrine facility, itself. That means, there are no hiding places in the latrine, where people can hide, and be prevented from entering, or exiting from the latrine. Only hand rails need be supplied, and only barriers that are suitable for keeping people from falling into the latrine, need by provided.

Steps may also be provided, to a raised platform latrine, which is more sanitary to use, than a level to the ground, latrine. There should be no walls, and no blind spots when either ascending up the stairs or when descending down the stairs. Women, girls, men and boys, should all use the same facility, and there is to be no fraternizing. Fraternizing is playfully tearing up at the opposition, or at people who you do not like.

Tearing up at the opposition means, you are trying to over throw the person, and dispose of that person, into the latrine. Over throwing the person means to be using reckless abandonment when dealing with another. Reckless abandonment means to be recklessly risking the life and limb of another.

There will be no frolicking at the latrine site. Frolicking is when little boys, and big boys, and little girls and big girls, play around and provide possible hazzards to others. You will not behave in a hazzardous manner towards any one, at any time, or you will be asked to leave, and to not come back.

There will be no play time allowed for children, as this is a collection site, and that means it is a holy site for holy activities, so leave brats at home, and do not bring any one who drinks alchoholic beverages, or who acts unwholesomely, to the collection site. This is a private site, and a prayerful collection site, and that means, you are coming there, to pray, and to make love, and to sexal, as GOD's children, so as to purify the site. You are not allowed to act randomly and with reckless abandoment. Randomly means, without proper self control and restraint. This is not a gay fashion, show or parade, and we will not tolerate reclusive, or unwillingly unwholesome behavior.

Reclusive means, unwilling to participate for the stated purpose of purifying the area. Reclusive means, caution and carelessness is thrown out the window, and you are acting in an irresponsible manner.

Unwillingly unwholesome means, first, unwillingly means, non cooperative, private, or sordid. Sordid means you are acting in a selfish manner, and you are not acting in a responsible manner for self and for others.

Unwillingly unwholesome means, thusly, that you are acting in a selfish manner, irresponsible manner, uncaring towards others, and unwholesomely.

Unwholesome means, you do not care about the life and limb of others, and you would just as soon shoot a person you argue with, as talk to them for a friendly chat. Many of my kids, are very unwholesome, and will just as soon, talk to a person, as shoot the person. You will not act in any such manner.

Any unsafe or prohibited latrine construction will be ticketed on detection, by me, and you will be asked to rework the facility. That will be on the ticket, and please comply, if you and your friends who built it, will be so kind. If you do not rebuild it, you will be asked, with your friends, to leave the site, as you are acting in an irresponsible manner. You will not be allowed back to the site, without your showing proper repensive behavior. Proper prepensive behavior is an attitude of appology, as well as the acts of appology which means, you will take appropriate steps to see that the work is or has been redone, in the manner as required by safety laws, as stated by my children, under Gurkian Law. Either me, or my children, will leave the ticket, and you will be required to fix what ever it is you need to fix, or you will be asked to not stay and conspiriate at the collection site.

Conspiriate means, to participate freely with caution and care for the sake of others. Conspire is also the same, as conspiriate.

You will be asked to not stay and conspire at the collection site, means, the same thing. It means, you will not be permitted to participate freely with caution and care for the sake of others. That means, you will be asked to leave, and you will not be allowed to come back, if we, my children and I, and other attendents, as well, can at all help it.

Attendents are people who participate in the collection site activities, and they are people who take responsibility to make sure every thing is done, properly, and safely, with the sake and safety of others, in mind.

The Home Depot has many nice and useful janitorial equipments, and so it will not be difficult to build a safe and luxuriously clean, and handy, latrine, that is safe to use, for all people, of all ages.

Luxuriously clean, means, it is kept sanitary.

How do you keep a latrine, sanitary? You keep it clean and sanitary by venting the air out, freely, with no blind spots, either underneath or above, where pockets of air, and vapors can accumulate.

No partitions will be installed that will create a blind spot. A blind spot is an area where light can not penetrate. Therefore, your construction materials, must be perforated wood, or grated steel. You can weld together, if you know how to weld, a very nice, grated steel, latrine, that will be safe to use, by every one, of every age. You will need the correct strength of supportive steel poles, to handle the weights of the persons accessing the latrine, and of the latrine, as well. You will make certain to build it well, and to support it well, with firm foundations, of concrete or steel plates.

Any deviation from safe practices for building latrines, will be torn down, disassembled, and the persons or person responsible will ethier be asked to leave, or will be asked to appologise to the memebers of the collection, sincerely. If the person acts in a responsible manner, and appologizes, sincerely, and appropriately, then the person will be excused, with out further, charges being leveled. Further charges will be leveled by my children, if my children detect further, reckless abandonment on the part of any person, participating and acting in a reclusive or recklessly abandoned manner.

Glue People Begun 'Cleaning' Agents

Cleaning the toilet seats of the latrine, will also help to keep the latrine luxuriously clean, and sanitary. You should clean the toilet seats and parts of the latrine, with common household detergent agents, as at this time, we have no choice but to use the unwholesome, Lesbianists' manufactured, ajax, spic and span, lysol, and other such 'glue people begun' agents. Glue people begun agents means, aerosols, and other unwholesome petrol fueled compacted or pressurized sprays, or detergents, that help the Lesbianists to begin the process of turning human beings into glue people. Glue people, in this instance, does not refer to glue, but it refers to tar. Tar is an adhesive substance, and their intent was and is to turn every human they can find into tar people.

We have no choice but to use the local distributors selection of cleaning agents, but in time, we will one day, have all that straightened out, after we demolish the Lesbianists' hideouts, under ground, and after we kill them all, or welcome them in, as 'surrenders', with appropriate, remorseful, penentant attitudes.

Removal Of Latrine Wastes And Disposal Of Latrine Wastes

Latrine wastes materials shall be removed, and supplied to local pig farmers, who can then use the materials, for feeding the animals. Pigs and hogs love to eat away at latrine wastages, and no one knows that. Chicken also enjoy eating human wastages, as well as ducks, geese, and other fowl. Horses and burroughs also enjoy human wastages, if it is healthy enough, with large amounts of vegetable mass in the diets of the human beings, whose wastages are carried to the farms for spreading about in the hogs and pigs, barrels. A barrel is a place where wastages are loaded, up into trucks for delivery to a sewage farm, or a place where farmers can use the wastages, that the hogs are finished with, as fertilizers.

Hogs and pigs use a roped off area, for eating wastages, and employees keep track of the unloaded wastages, and the spilled wastages from the hogs, and then the spilled wastages from the hogs, are then moved to a separate area, for pickup by carriers of farmers. Foods grown at farms using hogs and pigs wastages are useful and nourishing to humans, and other animals.

No fees of any kind for loading and for carrying away wastes to hog and or also pig farmers, should be levied by truck drivers, as drivers will earn a tokenous gratitude tip from the hog and or also, pig farmer. An appropriate payment to the driver and deliverer of the human wastes to the hog and or also pig farmer, should be paid by the hog or also pig farmer, unless the farmer is cash strapped. Cash strapped hog and pig farmers may be given money compliments by the people at the collection site.

Money compliments are small awards, or minor payments, out of gratitude to the hog and pig farmer, for his or her useage of the human wastes from the latrines. Money should be collected, regularly, if hog and pig farmers are cash strapped, and then given to the hog and pig farmer, out of gratitude to him or to her, and presented, tokenously, or as a gift payment. How much should be paid, depends on the expenditures of the driver, for his or her services, and for the use of his or her, vehicle, and for its whollyfied maintenance.

Whollyfied means, the regular maintenance that will allow the truck or vehicle to run at tip top conditon or shape, for the life of the vehicle, figuring it proratively.

Proratively means, spaced out, and paid proratively, or over the period, at regularly spaced points in time, over the given span or the useful life of the truck.

Discussions regarding this, and discussions for compensations, should be held at the collection site, and at the delivery site(s) for delivery of human wastes, by all parties, concerned, regarding all of this, and the primary collection site attendants, the persons elected by the attending or participating persons, at the collection site, who show the greatest interest and sense of responsibilities, at the collection site and with regards to the collection site, and with regards to the collection sites' safe, healthy, and wholesome management, must attend the discussions, and must deliver their sound judgements as to who is to be compensated payments for their participation in the removal and distribution of the wastes from the collection site, to the hogs and pig farmers, and as to how much should be dispensed, per each removal and delivery of human wastes.

Participating persons at the collection site, should elect attendants, and the attendants should regularly check on all points for the safe management of the collection site. Participating persons means, persons who are there for sexaling, and for depositing their holy, pure, sacred, powerfully cleansing, and GODLY sexaling juices at the collection site.

Nevada Power, and all other vendors, are not participating persons, and should not be construed as participating persons, regardless of what they might wish to think, and if they have any complaints, I authorise the killing of all persons who disagree, and persist in arguing that they are valid participants, despite their not participating in your holy sexaling, activities, as individuals, and not as company employees. No company employee, or personel of any kind, may participate, except as an individual, lone, and wholeseome, participating, sexaling agent.

A sexaling agent, is a person who is participating at the collection site to assist in the purifying of the parcel of land, on which I will build my ministry, with the assistance of my children, by their participating in sexaling activities, and by their depositing of their sexaling juices upon the grounds of the parcel of land.

There is a hilltop trailor park, past the edge of the rear of the parcel, and there will need to be built a very durable, and strong retaining wall, to keep that hillside, shored up, and to keep the trailor park from crashing down the hill side, after slide begins, and creep causes the trailor park to fall into the open area, that will be needed to be excavated, all the way to the rear of the park.

The grade or slope of the hill, need not be steep, but can be at a relatively low angle of ascent. An angle of between ten to twenty five, to thirty degrees, in graduations, from front to back, can be accomplished, with little difficulty, and with no disturbment to the trailor park, or disturbment to the integrity of the trailor park.

We need not seek any permits for construction, as I do not recognize the Lesbianists' governments, on this planet, and if any person shows up who says he or she is a county or city planner, inspector, or whatever, you are to immediately kill the person, and deliver three fivers to the persons' head, as that person is a Lesbianist attempting to interfere in my religious activities.

All activities at the site are to be done, without any interference from any public or other authority, and all costs for all changes and alterations to the site are to be financed by the local construction companies, who are working on the hotels industry, and they will cease immediately their work on all construction, private housing construction, casino construction, and all other towers construction, or work construction, other than the basic infrastructure needed to support the present population of Las Vegas, Nevada.

We are taking over this town and you all will begin to prepare to vacate this town and hand over all of your construction equipment, now, or face your companies and your private persons destruction with my fracturable rocks bombs, begining with the New Orleans Hotel, and all related hotels, and casions, bars, and restaraunts. That means, every gambling establishment is to shut down, stop construction, and vacate this town, now, immediately, post haste, if you wish to live.

You will be destroyed if you refuse to follow orders. We are putting a stop to the non sense of the Lesbianists begining with Las Vegas, Nevada, Henderson, Pahrump, and all parts of Nevada and the Southwest.

You will disband your operations and hand over your companies, such as the water bureau, the power company, the gas utility company, and every other company, including all supermarkets, grocery stores, malls, and so forth, every last business in Nevada, and the south west, to the participants at the collecting site, to take over and then properly manage, until all residents of Las Vegas, remove themselves, to my kids facilities.

Is that understood? You are all resigning and moving into my kids place, underground, surrendering, and moving on for those who are not Lesbianists, but who wish to vacate this area, as this area is in whole, now, a religious grounds.

That means, that I will require the participants at the collection site to take over every thing, and to bring the news reporting stations to their knees, and force them to report the news, that every one is to retire to my kids underground, fortress, and they are all to remove them selves from Las Vegas, now, post haste, immediately, other wise, we will have a fractuable rock bombs throwing contest, to see who we destroy, first.

You must surrender all your holdings, owned property, equipments, and every thing else you call your own, and hand them over to the participants at the collection site.

Is that understood? "YES SIR!" had better be your answer, or you will find yourself on a one way ticket to my Epcot Center, with no return ticket, guaranteed, for however long it takes, to find you tummy mommies and tummy daddies.

I don't think there will be many volunteers, in the near future, as you are all abominant kids of mine, and the only kids people will ever bare, for some time to come, are abominant kids, and animals, and animal humans abominant kids, so I do not think you'll be leaveing my Epcot Center any time soon, if you resist and if you force us to kill you.

Is that understood every body? Good.

The penalty for not complying is death. Do you understand what I am saying? I hope so.

The Party Is Over In Las Vegas, And In The World

The party is now over, in Las Vegas, and at all casinos and gambling establishments, as we know you are all cheating, and we will kill every single last one of you to close you all down.

Who Is Staying And Who Is Leaving, Etc.

You will close down all of your establishments, world wide, and lock the doors on them, and then demolish them, post haste. Is that understood? I hope so. Either you do it, or we will do it. Do you understand that, now? I hope you do, because we are going to demolish every one of your establishments in this town, if you do not demolish them, yourselves. Every last one of them, all houseing, except for those noted in my children's compliance statements, which you are all to recieve, all trailor parks, with some exceptions, all every thing is to be removed, with only the basic infrastrastructure for heating, lighting, water, sewage, medical, hospitals, medical clinics, pharmacies, and so forth, food markets, services industry, HUD, Welfare, SSI, and other operations for the welfare of persons who are here, who can not leave, or who will be staying for some time, and who will be needing the services of those agences, construction companies, lighting companies, electric infrastructure installation and maintenance companies, as well as gasoline supply and distribution vendors, diesel fuels supply and distribution vendors, restaraunts, and telephone. That means, all humans are leaving, except for those person who are to stay on, as indicated in my childrens' compliance statements, and except for those who wish to stay on and participate in spilling their pure, holy, sacred, purifying juices, and those wishing to participate in purifying my area, all of Las Vegas, Nevada, the valley and beyond, in time.

Rules For Hospitals And Clinics, Etc.

There will be new rules for hospitals, and clinics, and my kids will see to it, that the new rules, are followed. There will be other rules, as well, and my kids will see to it, that they are followed, as well, or persons who wantonly disregard them, will end up in prison, underground. My kids have not only a living environment, they have prisons, as well, jail facilities, and many other things. Check with them for a fuller list, of what all they have in the way of facilities, as many are very nice, and there are great possibilities for improving your health, and rejuvenating your bodies, etc.

My kids have a full list of who is to be leaving, who is to be staying, and by when people are to be leaving, and where persons staying, are to be moving to, as we clean up this area.

All of you had better check with my kids, especially, you Lesbianists, but not only them, you religious fanatics, as well, and every one else, of course, or you, especially the Lesbianists and religious fanatics are at risk here, but not too much, the others who are to check in with my kids, risk dying, perhaps, prematurely, and then ending up in my Epcot Center.

My kids also have lists of who the people are who will be recieving all the properties for taking them over, which properties need to be demolished, who will be demolishing things, and how to remove those things that you must remove, and to where you will remove them, and dispose of them, and in what manner you will dispose of them.

You will hand over every thing, and you will all comply, and those who are required to hand over their properties, after complying with removal demands, will hand them over, and then will move out and into my kids place, in accordance with the time schedule that my children have for you to follow. You are required now to check in with my kids, get every thing sorted out, and learn all the details, and then comply.

Those who do not follow these orders risk an early and, fortunate for us, timely meeting with death, and entrance to my Epcot Center for a long stay.

Erecting A Partition Blind On West Tropicana Ave.

The roadway, West Tropicana Ave. runs east to west, and west to east, and it is advisable to erect a pertition blind, so as to not disturb traffic, that comes down the side of the road, the parcel of land sits on, at very fast speeds, with people rubbernecking to see what is going on, as many people will possibly end up flying into the area, with their automobile, truck, gravel carrier, or eighteen wheeler spinnning and turning over, out of control, and then sliding off the roadway and into the collection site.

The traffic is very fact on West Tropicana Ave., and with the interest of the local area residents, who will learn about the collection site, and the activities at the collection site, there will be many hazzards arrising as a result. Some persons may decide to stroll through the area, to steal purses, or wallets, or cameras, and so forth, as there are many poor, indigent, or hopelessly poor, persons, in the area, who do not have any work, and who can not feed themselves, and they need to steal things, to sell, to earn a living.

Such people should be spoken to, and fed, and then warned not to act in an unrighteous manner, which means, please do not steal things, or damage the property, or any thing on it, and please do not get into fist fights, over insults, and disagreements with participants, about who is GOD, and so forth. There are many impoverished persons from South America, and Central America, who only know their local area witch doctor's teachings on voodoo men and voodoo women, and who know nothing but folklorish stories about gouls and ghosts, and people, or ghostly gouls, i.e., people immitating 'gouls', or mean and rotten people, who go 'boo!', or try to scare and rob people, in the night.

Electricity, Lighting, Etc., To Be Supplied By Nevada Power Free Of Charge, Or Else

The partition blind should be sturdy, tall, and break proof, so that vandals can not break it down, or climb over it. Lights for use at night, with the proper permissions for an electrical hookup from the Power Company, Nevada Power Company, will be granted, and provided by Nevada Power, along with all other neccessary, needed, safety lighting hookups, to illuminate the area, fully, at night, so that it looks just like, or nearly like, daylight, or a well lit soccer areana at night, or a well lit professional baseball field, or football field, at night, and it will be given for free, lest we burn down Nevada Power, and kill all of their Lesbianists employees, and meter men, and all of their tawdry workers, who we do not wish to deal with. That means, we will blow up their buildings, and kill them all, unless they give us the electricity that we require. If we need to kill them all, we will then acquire all of their holdings, and we will operate all of them, ourselves. Fair Warning has been given, and consider that as a done deal, unless you wish to visit my Epcot Center.

Meat Vendors And Hispanics From Central And South America

An air of friendlyness, but caution, should be used. Men and boys are there to protect the women and girls. So, please work in teams, and do not let individuals, who might get kidnapped, and sold off to meat vendors, for a few dollars, or pesos, as it is, in Las Vegas, as the majority of such kidnappings and sales of human beings to meat vendors, the Lesbianists chain stores, such as Colonol Sander's Kentucky Fried Chicken, Burger King, MacDonalds, Jack 'n the Box, Wendy's, In-'n-Out, Fat Burger, Taco Bell, Dell Taco, and all the other, fast foods vendors, is by the locally landed hispanics from Central and South America, who need money, to stay alive.

Erecting A Partition Along South Decature Blud.

South Decature Blvd. also has much traffic on it, and there will be lots of people, rubber necking, to see what is going on, so a high, partition wall, made of lumber, should be erected down the side of South Decature Blvd. to prevent all such incidents of rubber necking, and reckess abandonment, from occuring.

The partition should be about ten to thirty feet high, and should be well constructed. Why so high? We do not want people climbing over it, to sneak into the area, to steal things, and to fight with people, and to cause trouble, and to come looking for young girls, and young boys, and helpless, elderly folks, and uneducated to the whims and ways of the downtrodden, brutal, abominant kids of mine, walking the streets of Las Vegas.

Yes. They are abominant kids of mine, and the proof of that is that their children come out as monkey people, and orangutan people, and chimpanzee people, and if possible, the hospital whisks the baby away from its mother, and disposes of it, in the prep rooms, used for killing incoming, abominant kids of mine.

Drawings On Demolition, Construction, Etc.

My kids have construction drawings for constructing all the facilities needed at the collection site for all the facilities that will be needed. They have electrical drawings for lighting, etc., health, fitness, and wellness facilities drawings, latrine facilities drawings, showers facilities drawings, food and beverage eating and drinking areas drawings, and all other drawings related to all things that will be needed to be constructed, or altered in any way, for our project to proceed, including but not limited to, demolition of the cliffs, leveling of the entire area out to Harmon Ave. and up to Flamingo, and back to Tropicana, as well as what is to be removed and leveled between Jones and Decature. There are a few minor exceptions, such as the building that I am living in. Who will move where, to consolidate staff at this project, and who will be moving out, at this project, and what will be leveled at this project, are all detailed in the program specifications, my children have. My present quarters, will be my place of residence, as things move along, and in time, in accordance with the schedule for construction, a temporary facility for me will be constructed near the area but between Flamingo and Tropicana, and somewhere between Jones and Decature. Please see them for details. After the area is purified sufficiently, and after all the areas to be purified, are purified, and my children will decide on when that is accomplished, my children will then activate the technologies, and acquire the resources they need, and then they will build a more permanent settlement arrangement for all people concerned, who are staying on, if they decide to stay on.

The partical dismissive technologies and remissive technologies, for foods, and medicines, and other items that are needed, for continued survival, and for all other required purposes according to the specifications for the sexaling for a living programs, will all be provided to the participants who wish to stay on, and houseing for them, as well, will also be included. Parks will go up, and so will many other locally needed facilities. Many things will disappear, as my kids will partical dismiss the things and structures they need to remove, as they construct the new area, for all persons staying on in Las Vegas. My kids have a list of all the names of all the persons who may, if they decide to, stay on in Las Vegas, and not all of them, are local people, so you should all check to find out whether you name is on the list or not. All other persons, who are to be moving on, and all persons who do not wish to stay on, here, will be required to move into my childrens' present facilities, which they will continue to expand as we continue our program on this planet. We will eventually clear every one out of the area, inside and outside of Las Vegas and the Valley, and surrounding areas, and the world over, except for the persons whose names appear on the list, as houseing can be provided above ground, for participants in the juices spilling and areas purifying operations, by my children, if those persons wish to stay on and participate.

All other people will be required to move into the facilities my children have, and are continuing to upgrade, and expand, in their encapuslated living environement, in which, many people currently live. Persons in the encapsulated living environment, may also attend the collection site area activities, and future clearing activities, for purifying the areas with their pure, holy, powerfully cleansing, purifying, cleericating [cle-er-i-cating], and GODLY energies filled, sexaling juices. Cleericating means, the same thing as clearifying. It is just a slightly different but related word from another a variant language of English, and to cleericate basically means the same thing as to clearify. When we get the areas, cleared enough, and purified enough, my kids will then start building things for the participants. All others will move below ground, and live in the encapsualted living environement, until they have earned enough money, with their friends, as talked about earlier, to purchase a lease on land, and acuire the lease on resources needed, to build a home, etc., for a large group of people, who will be living together, and working together in the sexaling for a living programs, and so forth.

When Will This All Begin?

As soon as people begin to comply, we will begin our efforts to clean up Las Vegas, to begin with, and then, the rest of the world, and then, the rest of our universe. It will take a long time, as we need to spill our juices, the lay persons, anyway, for some time, to come, as our universe is quite large, and so is the rest of it, that we are going to be recovering.

My Spilling Of My Purifying Sexaling Juices, And My Spilling Of My 'Prayer Time' Purifying Juices

I spill my juices, only for religious ceremonialing activities, during certain relgious ceremonies, and I don't spill my juices, on the properties, as I'm not set up to spill my juices, on the property, now, and will not be set up to spill juices, until I find an excuse for that, and an excuse for performing a religious hand prayer signaling ceremomy that will require my spilling of my juices. It's pretty hard to spill juices, when there are no other persons working with me, and I do not work with lay persons, unless they are confirmed by me, and so there will be maybe, some confirmations, but not neccessarily so, as I do not know who is going to wish to be confirmed, and by the way, who ever it is I confirm, must realize that I am the Mother and Father of all human beings, animals, and living beings, and the Creator of my universe. There are not that many people who understand that, except for my kids, my working, unionized kids, and so it will be some time, yet, maybe a few hundred or more years, before some one realizes, 'Hey, he IS the Mother and Father of all human beings, etc., etc., etc.,"

Spilling 'Prayer Time' Spittle Generated While Praying

Until then, I'll use my spittle juices if I need to drop or drizzel any juices, that I generate while I am religious hand prayer signaling, as I don't like or care for the idea of jerking off in public, to spill purifying juices, in public, regardless of the fact, that I am GOD, so it ain't going to happen, any time soon. When I find a authentic 'believer' who realizes and understand that I am GOD, and so forth, I'll begin my public spilling of sexaling juices. I don't mind it in private, but it is not going to happen in public.

Monkey Babies, Jimmy Carter, Oliver North, And The Lesbianists' Conspiratorial Bullshit Stories Of Adam And Eve, And "Jesus Saves"

Most people do not know this, but many births end in tragic loss of the child, because Jerry Falwell, Oliver North, Jimmy Carter, Ronald Reagan, George Bush, Jr. George Bush, Sr., and the rest of them, order and expect all the Lesbianists doctors to kill all babies born to people which do not look human. Doctors at birthing hospitals also comply, quietly, as it is hospital policy they can not break. If they go against it, they risk losing their job, and possibly losing their life. This is not a joke, and it is the Lesbianistgs policy of having all birthings in hospitals exactly for this reason, for disposing of non human looking babies, at birth, so that their bullshit creation by God, of a 'pair' of people, Adam and Eve, and that "Jesus Saves all good Christians", can not be contested, by logical proof of non human births to human being couples, or single parent women or girls. Abominant kids are born every day to my kids, on this planet, and they are all executed, or killed off by the local citizens, by their fright and fear of 'ghouls and ghosts' and 'goblins' in the night that go, 'Boo!'. These idiots, both the abominant South Americans, Central Americana, and all my other abominant kids, North American, Europeans, Russians, Chinese, Japanese, Thai, Philipine, and so on, must ask them selves why they are blessed with babies which are either not human or are abominant humans, or part animal humans. If they ask them selves these questions, they will find out the only answers are that these people born to them, are my children, and my children are born to them for reasons that have not been disclosed to them, before, by the clergical societies, i.e, the religions of the world, and by the other societies, set up by the Lesbianists, or by societies nurtured along as part of the Lesbianists' 'tragic comedy' of their toying with your lives for their humoring themselves, and for their amusing themselves. Once we get rid of the Lesbianists, and their ways of doing things, we will begin to see babies that are either not human, or are only part human, in animal bodies, and they will be born to all of you who are tummy mommies, and tummy daddies, if you birth enough children, to find out. How many is enough? About one in forty or fifty by my estimation, but depending on the person, it may be between thirty to eighty, from one person to the next. Take that to your pastor, and tell him or her, to stick it up his or her ass. It is the truth that animals are born to humans, all the time. Not only that, but abominant kids of mine, usually of the apey kind, but not always, are born to the 'normal' looking humans on our planet, and in our universe. We need not be afraid of these children, as animals, can be collected and put into zoos, and animal humans can be raised by the parents, or parent, in the case of a single parent. In time, we will adjust to this reality, and we will raise fine children, abominant animal humans, or human appearing abominant children. That means you are all abominants, and the Lesbianists are laughing at you, and at themselves as well, as they go around and kill and cravenly torture every possible person they can. We will put an end to their craven ways, and we will make a wonderful universe for all of us to live in, in peace, and serenity, once we get started practicing my religion, and once we begin erasing, sufficiently, our karma and our karmic markups, with your purifying sexaling energies, prayers, and other activities, such as syncopated dance, syncopated excercise, syncopated sexaling, and so forth. You time it to the metronome at one thirty seventh, for now, and that will be fine. In time, we will get accurate metronomes, and then we will chance the pace, just ever so slightly, to push my kids along, as I explained about, for our wholesome and healthy universe, for all of us to live in, together with each other.

Punishment For People Who Practice Voodoo Religions Is Dismendment, I.E., Death

We will not be killing or executing children any more, at hospitals, or at homes, or in primitive, backwards towns and villages, or rural hideaway villages, where voodoo religions muster the people into peculiar states of mind, where they become entranced, and then begin mindlessly, acting like chickens, and birds, or fowls, or hippos, and so forth. There are too many of these types of so-called 'religions' in this world, and we are out lawing all of them, and punishment for adhering to them, will be a trip to my Epcot Center, as I have my children particle dismiss their bodies, and then dismend them, bit by bit, into their base components, and then have my children whisk them into my Epcot Center. We will bring every one up to the level of education every one needs to be at, to better understand my universe, and those who persist in abandoning their obligations, will be dismended with out further notice, after they are sent their last warning ticket, from my kids, in accordance with Gurkian Law. That also applies to the Lesbianists, and to every one else, who is unable to get the picture here, and get with the program. There will be no exceptions. And, this is not a joke. My kids have courses for you to educate your self in, to pull yourself out of the past Lesbianists' way of life and thinking, and into the new and current, reality, that we will be living in, for ever, from now on.

Local Businesses Will Have No Problems At All With The Collection Site And Will Have No Problems At All With The Activities Of The Faithful At The Collection Site

Walgreen's is across the street, on one corner, and Home Depot is on another corner. I don't think Walgreen's will have any problem with you using the site for your camping, for your meeting with others, for your sexaling with others, and for you and your friends' purifying sexaling activities in that park, i.e., the collection site. Home Depot, I don't think will have any problem with your use of the parcel of land, either, for those purposes.

What To Do If The Police Come?

Now, if the police come, and I'm there or not, I don't know what they'll say, but they have not got any right to say any thing to any one. Is that clear, Mr. Mayor of Las Vegas, and every one else in the area. I hope it is, as I am not going to stand for your interference or any one else's interference in my religion and in the relgious activities of people who wish to participate in my religion, sexaling to purify my universe. IS THAT UNDERSTOOD, MR. MAYOR AND EVERY BODY ELSE? I HOPE IT IS! AS A 'NO SIR' WOULD BE UNACCEPTABLE!

Now that we have an understanding, I think there will be no problems, and if there are, I will see what I can do about it, by calling my kids up, with my religious hand prayer signaling ceremonies, to see what they can do for you, to help you out, and to break the backs on law enforcement officers, and the Mayor of Las Vegas, and every other person, Lesbianist or not, who tries to interfere with me, or who tries to interfere with the people practicing my religion. I will not stand for any interference from any one, including Mr. George Bush, Jr., the current president of the United States, or any one else, such as the Mayor of Las Vegas, or the Governor of Nevada, or the Nevada Highway Patrol, or the Nevada Sherrifs Dept. or the Las Vegas Metro Dept. or with any other persons or parties, such as the Las Vegas Gaming Commission, or any other Lesbianists' or Lesbianistic organization set up by the Lesbianists, and that means all you church goers, parochial school teachers, and students, and others, and if any one interferes with any one who comes to my ministry's claimed parcel of land that I am purifying for setting up my ministry, and if any one hassels any one there, than who ever is visiting the collection site, to help to purify it, you have my permission to kill the persons attempting to interfere in any way at all, on sight, with what ever you have to kill them with. Please dispose of their bodies in the nearest trash dumpster.

DO YOU HEAR ME? MR. MAYOR. YOU ARE A DEAD MAN IF YOU EVEN TRY TO SEE WHAT MY RELIGIOUS FAITHFUL ARE DOING, AND SO IS EVERY OTHER PERSON ON EVERY SCHOOL BOARD AND CHURCH OR OTHER LESBIANISTS' COMMITTEE. IS THAT CLEAR, EVERY BODY? GOOD!

You will not interfere with my religion, and with my religious faithful, and they will come to Nevada, and they will come to Las Vegas, and they will start sexaling on that property as they see fit. Does every body understand that? I hope so. Now. Non responsive persons, who ignore my statements, will find themselves in trash cans, and trash dumpsters, every where in Las Vegas, and any where else, where there is a convenient trash can or trash dumpster. There are lots of them around, and people are throwing dead people into them, every day, across the country and around the world, and they all end up in landfill sites, and so there will be no added charges for our using the statewide Nevada Silver State trash retainers and containers, for however many others who need to be killed, and for my religious faithful to then place them into the trash cans and trash dumpsters. No charges should be levied by any other Lesbianists' trash collection company, around the world, as they are all owned and operated by the Lesbianists, and we will not support them, in any way, what so ever.

If Mr. Mayor would like to be the first guest inside of one of the Nevada Silver State trash dumpsters, then he will try to interfere, in person, and he will be shot, point blank, in the center of his head. You will then kill him with three fivers, to make certain he is on his way to my Epcot Center, for his next trip out as a tummy baby. If the Governor of Nevada wishes to interfere, then he does so at the risk of being shot, killed, and made certain he is dead, with three fivers, and then after that, he will be deposited into a local or state trash dumpster, either here, in Nevada, or in California, or Arizona, or where ever it is convenient to dump him into a trash can, trash container, or trash dumpster.

Lesbianists Enjoy Eating People, Who Are Alive, As Well As Eating The Bodies Of Those Who Are Dead

You should let the state's vice mayor of Las Vegas's office know, who was shot, killed, and confirmed dead, after depositing three fivers into his or her head, and then where the body is, and generally when the body was dumped, so that they can get an idea of how decomposed the body is, and whether or not the body is in a land fill site. They can then check on it, and verify that the body will make it to the land fill site, if it isn't already, there, where all the other bodies, are ending up, unless they have already happened to have beeb eaten up by the Mayor, or by the friggen Governor, or by the Sherrif, or by another Lesbianist.

All persons are free to travel to Las Vegas, and they are invited to stay at the parcel of land that I described, and they are invited to make it into a nice camper trailer area for recreational vehicles, or for what ever other types of outdoors camping vehicles, travel trailers, caravan buses, or any other types of camp site temporary stay, housing and living arrangements you would like to use the area for.

Every Game Of Chance, Gambling Machine, Or Slot Machine Is Rigged, In Every Casino Around The World, With Only A Few Exceptions

If you will all sexal, regularly, to the best of your abilities, and help me to purify the area with your sexaling, undisturbed by any one, and clean it up with your purifying energies, you are more than welcomed to come and enjoy the area, and see what fine attractions, will be leaving Las Vegas, in the not so distant future, including the gaming commission, with all their phoney, rigged gaming systems, that the Lesbianists control.

The Lesbianists' Articles Of Participation

The Lesbianists have every game that you can possibly rig, controlled by electronics devices, or by slight of hand, mechanics, who control the gaming rooms, and gaming halls, so that only Lesbianists win any money, that is worth mentioning about, and so that the Gaming Authorities, and the Mayor's office, and every other Lesbianist organization in Nevada, who has any one in their office, can then go and get the money the Lesbianist won, and get a percentage of it, given back to them, as they have arranged to do that, as that is part of their oath, and part of their sworn promises to do, as that is written out in their articles of participation, their rules for living upsite, not down below, in the labrynthine cities, and every Lesbianist must follow those rules, and when they win the Megabucks, and every Lottery in the world, they must give back money to the Lesbianists, as every game of chance that is run in this world, except for bingo, is rigged. However, even Bingo is rigged, in some ways, by people switching cards that look like winning cards, while players are not looking, and by other naughty tricks.

Every Lottery In The World Is Rigged

Every lottery in the world, performs the drawing out of the balls before a live audience, in most cases, before they actually air the show, and they have illusionary tricks they play, with the technologies they have, and they sucker people out of their money, daily, around the world. Las Vegas is no different, and they sucker every one out of their money, except for the Lesbianists, and they let some people, win now and then, small jackpots, on the gaming machines, and then after a winning streak, they set the machines the person uses, so that the person can not win a dime. They have the technologies for rigging every machine in Nevada, and across the country and around the world, so next time you visit one of their casinos, be sure and detonate one of our bombs, you can make, and destroy that casino. Is that understood? I hope so, as every day, millions of people are being suckered out of their hard earned money, they pay taxes on, through the nose, till they are practically choking, and the Lesbianists take it, and support their folley and games. They also support their folley and games with your revenues, that they make sure you lose, at every casion, and at every gas station, with a convience store, that has gambling machines in it, for you to deposit you money into. Every lottery in the world is rigged, and so if you spend money on it, if you are not a Lesbianist, you are just throwing your money away.
